Ms. Faith Chase

Subject: Environmental Impact Statement Preparation Notice  
 Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
 and Hueilo License Areas

Dear Ms. Chase:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Hueilo License Areas, your oral comments at the February 23, 2017 EIS Scoping Meeting, and for your written comments received February 23, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Hueilo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
3. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures

in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I)

Your oral and written comments, and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

Mr. Frank Caprioli

February 22, 2017

Maui Electric Company Community Meeting Room

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. CAPRIOLI: Aloha mai kakou. My name is Frank Caprioli. I'll try to keep it pretty simple, but a couple things I think this EIS should definitely address is all the history of Alexander & Baldwin and their connection with the native taro farmers. And I've been fortunate enough to be out in (inaudible) and work in the fields and hear the frustration directly from the farmers and to see it and to see all of these promises that Alexander & Baldwin says that they're going to do and they never, ever do. I think that that's crazy, craziness, you know. I can feel the frustration from them.

I also think the EIS should also address alternative measures to have somebody else maintain that ditch. I mean, God, East Maui Irrigation, how many times are we gonna let these guys get away with what they're doing? You know, they're obviously not good stewards, why give -- why are we gonna give it to them? Why can't the state -- I mean, there needs to be other options that need to be looked into, you know. And again, I completely understand that water is life, everybody needs water. I don't -- I'm pretty sure, I don't think any of the kalo farmers (inaudible) are asking for all of the water. I'm pretty sure that they've made that pretty clear, you know, and so to throw that out there is kind of crazy. I'm pretty positive they're not asking for all the water.

And another thing is the uncle talked about, you know, with the akule and stuff and, you know, the hihiki and that's where all the fish spawn and stuff like that, you know. And I was fortunate enough to go down to the Wailuaiki, it's the bay east of Wailuanui, that one has two rivers that flow inside there, one of them on the far side is diverted, the other one isn't. I mean, it's night and day difference, night and day difference, the one side there has got hihiki, which you rarely see around Maui, all the way up to the shoreline, the other one has got nothing, no reef right in front, nothing on the one. It's common sense, it doesn't take a rocket scientist, you know.

Another thing I'd like to say too, I think there needs to be mediation between East Maui Irrigation and the Hawaiian community, 'cause, again, there is a lot of -- a lot of lies that have been told, a lot of things, a lot of promises that haven't been up kept. And I think in order to be able to move forward, that stuff needs to be sealed up. I mean, it's just -- it's crazy. So I really hope that you guys will look into the history and really go and talk. I know there is some of the East Maui taro farmers in here and go and talk to them because they have a lot of mana'o to share.

So thank you guys for your time.

What I'd like to say too is that there's no -- like who -- who oversees East Maui Irrigation? You know, we -- on the west side where I'm from, we're dealing with some stuff up in streams and it's -- it's incredible to try and talk to somebody.

I mean, so really quickly I want to say there needs to be some oversight. You know, East Maui Irrigation is kind of -- and, you know, one last thing too that kind of blew my mind, sorry, is that the East Maui taro farmers that have gotta get -- they've gotta get permission to go drive up and they only get the key one day of the month, this is (inaudible) and they've been there forever. Like how is East Maui Irrigation able to go up there all the time, but the local people who are from there, they've gotta ask permission and they only got a certain window period to go up there. I think that's ridiculous. I think that is ridiculous.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Caproni:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your oral comments at the February 22, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action, including potential alternative lessees. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied.
3. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I)

4. Trutta and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C). Sea Engineering, Inc. and Marine Research Consultants, Inc. prepared the East Maui Irrigation Assessment of Streams and the Ocean Water Chemistry (See Appendix B) which addresses estuarine function.

Your oral comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

**Subject:** EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Wilson Okamoto Corporation,

I'm Gabe Johnson and I live on the island of Lanai. I would like to testify on the stream diversion and the importance of having an unbiased entity create the EIS for Alexander and Baldwins proposal to continue diverting water from the East Maui Watershed.

I'm sure many other testifiers will be speaking on the issue but I would like to bring up a point that needs to be addressed. In my work as an invasive species technician here on Lanai, I work a lot with Incidental Take Permits. I believe that if we look at the water that is being diverted, Alexander and Baldwin should be required to create a Conservation Action Plan that requires some kind of mitigation. There are very specific endangered species that will be adversely effected due to the stream diversions. I have spoken with Jonathan Spague from Fish and Wildlife, who is a federal Biologist who specializes in endangered species and he agreed. In fact he gave me several Damsel flies, who are listed as endangered that could be used to require A&B to apply for a Incidental Take Permit. Two Damsel flies are already listed as endangered, Megalagrion pacificum, Megalagrion nesiotae, and the newly listed (Sept 2016), Megalagrion xanthomelas. Wildlife surveys of the area prove that these endangered species are located within the East Maui watershed, specifically using streams to lay eggs and propagate. Its my firm belief that the actions done by Alexander and Baldwin would require them to obtain a Incidental Take Permit, create a conservation action plan, and begin work on habitat (i.e. stream) restoration.

Mahalo.

Sincerely,  
Gabe Johnson

Mr. Gabe Johnson

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Johnson:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 10, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued *"right, privilege, and authority to enter and go upon"* the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the *"purpose of developing, diverting, transporting, and using government owned waters"* through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied.

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

3. Truttia and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the Draft EIS (See Appendix A and Appendix C).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

Subject: Re: EISPN for Proposed Lease for the Nahiku, Ke'anae, Honomannu, and Huelo License Areas of Public Land, Maui, Hawaii

Dear Mr. Okamoto,

Mahalo for the opportunity to provide comments on this Environmental Impact Statement Preparation Notice (EISPN) for the use of water from four license areas consisting of 33,000 acres of public lands and waters in East Maui.

As a resident of Haiku, Maui, I am affected by how our streams and watersheds are managed. Because of my interest, I would like to request that the Draft EIS for this proposed Lease include the following information which is not clearly indicated in the EISPN.

We can lessen the environmental impact with simple changes such as (1) shortening the proposed lease to provide time for assessing impact (2) diverting smaller amounts of water than proposed (3) allow communities to bid on ditch-management leases (4) developing ways for leases to generate funding for management (5) restoring flows to more streams where East Maui people live. Hooliawa, Waipio and Hanawana streams have not been part of the court case that has been going on for 15 years, so no one has ever discussed giving water to the streams used by these neighborhoods.

Environmental Impact Statement Preparation Notice  
Proposed Water Lease for the Nāhiku, Keʻānae, Honomanū, and Huelo License Areas  
Scoping Meeting Comments of

Mr. Isaac Hall, Esq.  
February 23, 2017

Haʻikū Park and Community Center  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. HALL: I want to thank the East Maui people for letting me speak now. My name is Isaac Hall. I live in Haiku. I'm an attorney, and I've been working on this case for 40 years. The preliminary comments on the EISPN have been submitted. I want to cover some points that may not be addressed by others.

One, the proposed leases of public lands must be disposed of at a public auction. I know this point is being made. The assumption is being made, unfortunately, that the ultimate lessee is going to be A & B. Even though it's been stated by Wilson people that it's not, they're still talking about what we're going to examine in this is the 30,000 acres and that we should address the impacts of those 30,000 acres. That would render this EIS inadequate. You have to address other alternative lessees. Let's, you know, think about who else might be interested in getting this land and address those impacts. Those are alternatives that have to be addressed in this EIS.

Two, when A & B applied for this lease many, many years ago, it was for a fully functioning sugar cane plantation. The plantation closed, the lands are mostly fallow. There's no need for -- there's no current need for anything like 115 million gallons a day. The current application is stale and should be withdrawn and replaced by an up-to-date application.

Three, the lease is for all four license areas. This is an antiquated concept designed to provide all of the water to one prospective lessee, A & B. DLNR is required by law to lease lands in economic units, minimum-sized areas that could be served by the water. That's HRS 171-33.3 in the Big Island Small Ranchers case. The alternative of separate leased license areas. Let's say for the Keanae-Wailua community, carving off an area that could be leased to them alone, for their purposes alone, is an alternative that has to be addressed. The alternative of a separate leased license area for the Huelo area. Carve that off. Let them go in and bid for it. And likewise, a separate leased license area for say the Haiku area. Let the Haiku community go in and bid for a lease. These are smaller units that by the statute that applies to DLNR have to be discussed as alternatives. If they are not, this EIS is going to be inadequate again.

Again, as others have said, No. 4, these are 5(f) lands. They're part of the public lands trust and part of the seed lands trust. Native Hawaiians are the beneficiaries of these trusts. Now there are three aspects of this. One is that the first priority to this water belongs to the native Hawaiian homes. That means the current and future needs of Hawaiian, of people on Hawaiian home lands must be carved out first. That has never been done, it's never been studied, and that has to be done in this EIS or it again is going to be inadequate. Also, 30 percent of the revenues from the leases must go to Hawaiian homes to be spent

February 23, 2017

for the benefit of native Hawaiians. 20 percent of the revenues from the leases must go to OHA to be spent for the benefit of native Hawaiians. That's 50 percent of the revenues from these leases is owed to native Hawaiians. DLNR, BLNR has never paid -- well, they have paid attention to it, but they've paid tiny amounts in lease amount -- in leases, for the leases. BLNR has never appraised the value of the water that it has provided to EMI and HC&S. HRS 17133.5 requires that before any notice of an intended disposition is given, BLNR must determine an upset price for that lease based upon the fair market value of the resource being leased. BLNR has never done that. It's leased everything from way below the fair market value.

So in this EIS, as part of it, a study must be done, studies must be done, and one of those studies must be an appraisal of the fair market value of these lease lands. They cannot possibly satisfy their trust obligations to native Hawaiians unless they do this. This is a point that other people have touched on tangentially. This is 6. Any lease of water rights requires a watershed management plan. That's in their statute 17158-E and F. That's being done to prevent degradation of surface water, prevent degradation of ground water quality. So what has to happen here in an EIS is that the EIS must address the current conditions of the watershed and address steps that are required to restore the condition of the watershed to an adequate level. That's never been done.

As everybody's said, they've essentially had the equivalent of a 30-year lease but they've never done a watershed management plan. And you've heard testimony about what the condition of the watershed is. That has to be addressed in the EIS 1 or it's inadequate.

Number 7, I was disappointed to see the list of water users and that the people with riparian and appurtenant rights were totally left out. Those people downstream of these diversions weren't even mentioned. And I did notice that there was a lot of misinformation that I hope will get corrected later by those that know about the number of streams that are diverted, the number of streams that are in the petition area, the number of streams, that sort of thing. The numbers I heard were wrong.

Finally, No. 8, the alternatives considered were three. I've already mentioned four or five more, but there way many more alternatives need to be considered or else this will be inadequate.

Thank you for the opportunity to speak. And I'll submit more detailed comments by March 10th.

Re: Comments on the EISP/N regarding the EIS on the  
Proposed Lease for the Nahiku, Keanae, Honomannu, and Huelo License Areas,  
East, Central and Up-Country Maui, Hawaii

Dear Mr. Matsukawa:

These comments pertain to the EISP/N for the EIS triggered by A&B's May 14, 2001 application to lease approximately 33,000 acres of state land and to divert and transfer all water arising on these lands to its approximately 30,000 acre former sugar plantation in Central Maui. The comments are submitted on behalf of The Coalition to Protect East Maui Water Resources and are intended to help establish the required scope of the EIS.

I live with my family near a diverted East Maui stream. I am an attorney who has been working to restore East Maui Streams for 40 years, since the late 1970s. My experience is not comparable in severity to what was experienced by Native Hawaiians when, over one hundred years ago, EMI first constructed its diversions and ditch systems. These ditch systems and diversions were operated to unilaterally dewater East Maui streams and to prevent downstream users from growing healthy taro and exercising gathering rights. Even now, EMI operates its diversions, not based on the needs of those below, but instead based on the needs of its parent company, A&B, on lands on the dry central isthmus of Maui.

I will cover some points that may not be addressed by others. These relate to the socio-economic impacts of this proposed action, and socio-economic issues that must be addressed within the EIS if it is to be adequate. This proposed action substantially affects the economic welfare, the social welfare, and the cultural practices of the East Maui community, the Maui Community and the State and, therefore, the issues addressed below are within the required scope of this EIS.

In addition, an EIS is meant to assure an early open forum for discussion of adverse effects and available alternatives, and that the **decision-makers will be enlightened to any environmental consequences of the proposed action.** (Emphasis added). HAR §11-200-14. This EIS is intended to "alert decision makers to significant environmental effects which may result from the implementation of certain actions" and to "ensure that environmental concerns are given appropriate consideration in decision making along with economic and technical considerations." HRS §343-1.

The statutory and regulatory framework for dispositions of public lands through leases at public auctions therefore establishes the subject matters that must be addressed in this EIS in order to alert BLNR to the environmental effects and economic and technical impacts of this proposed action in its decision making on A&B's application. See, HRS §§171-1, 2, 3, 6, 7, 10, 14, 16, 17, 18, 29, 33, 34, 35, 36, 39 and 58. Some of these provisions require planning actions prior to any disposition. See, for example, HRS §§171-10. Some of these provisions require actions by BLNR prior to any notice of an intended disposition. See, for example, HRS §§171-33 and 34. These statutory provisions establish subject matters that must be addressed in the EIS to assure that the decision maker is fully informed of the consequences of its proposed action.

**1. Proposed leases of public lands must be disposed of at a public auction. HRS §171-14.**

We cannot presume, as is being done here, that HC&S or A&B is going to be the lessee. The EIS must explore the alternatives that other persons or other entities will be the lessee(s). Studying the impact of delivering water to the 30,000 acres constituting the former HC&S sugar plantation lands, without studying, as vigorously, the options of delivering the water to other potential lessees, will render the EIS inadequate. HAR §11-200-17.

**2. The Application triggering the EIS is stale and provides no current basis for this EIS**

When A&B applied for this thirty-year lease sixteen years ago, on May 14, 2001, it was intended to provide irrigation water for a fully functioning 30,000 acre sugarcane plantation. Agencies shall ensure that statements are prepared at the earliest opportunity in the planning and decision-making process. HAR §11-200-14. This has not occurred because of the delays caused by BLNR, DLNR, A&B, EMI and HC&S, prejudicing the rights of downstream users.

The HC&S plantation has closed. The lands are now mostly fallow. A&B has no current need for anything like 115 mgd of irrigation water. A&B testified that the County of Maui and A&B were currently using 20 mgd of irrigation water on their 30,000 acres. The current application is stale and must be withdrawn. This application must be replaced, if at all, with an up to date application. The May 14, 2001 application provides no basis for the EIS now being prepared.

3. **The Lease is for all Four License Areas.**

The notion of leasing all of the state lands within the Four License Areas is an antiquated concept designed to provide all of the water arising on these lands to one prospective lessee -- A&B. DLNR is required to lease lands in "economic units" in minimum sized areas that could be served by the water. HRS §171-33(3); *Big Island Small Ranchers v. DLNR*, 60 Haw. 228, 588 P.2d 430 (1978).

The alternative of a separate leased "License Area" for Keanae and Waiuanui must be explored as an alternative. The alternative of a separate leased "License Area" for the "Huelo Area" must be explored as an alternative. The alternative of a separate leased "License Area" for the "Haiku Area" must be explored as an alternative. These are all practical alternatives that must be addressed or the EIS will be inadequate. HAR §11-200-17.

4. **Alternative Lease Terms**

DLNR must determine "the minimum tenure necessary" for the lease "to support the intended use" and "the necessity for periodic rent openings in long-term leases to assure the State a fair return." HRS §171-33(7). At the time A&B applied for a thirty-year lease, its subsidiary, HC&S, was operating a fully functioning sugar plantation on 30,000 acres of land on Maui's central isthmus. There has been a significant change in circumstances since then.

The HC&S sugar plantation has closed. The 30,000 acres are now mostly fallow. HC&S has laid off most of its workers. HC&S has auctioned off most of its farm equipment. Under these new circumstances, a thirty-year lease to A&B cannot be justified. If any lease is to be considered to A&B, the tenure must be significantly shortened given the unclear future of these lands and the inability of A&B to demonstrate that any more than a small percentage of these lands are actually being farmed.

Alternative lease terms must be studied in the EIS to address this unclear future as well as the possibility that A&B will not be the lessee.

5. **The Leased Lands are in the Public and Ceded Lands Trusts**

The lands proposed to be leased, approximately 33,000 acres in size, are Section 5(f) of the Admissions Act lands. They are part of the Public Lands Trust and part of the Ceded Lands Trust. Native Hawaiians are the beneficiaries of these Trusts. These trusts must be managed for their benefit. See, Article XII of the Hawaii State Constitution and HRS §171-18.

6. **Native Hawaiians have a long ignored financial interest in these trust lands.**

a. **First Priority in Water to Hawaiian Homesteaders**

The current and future water needs of Hawaiian Homesteaders have first priority. These current and future needs must be studied and delineated in the EIS. The amounts needed currently and in the future by Hawaiian Homesteaders must be supplied first before any other

amounts can be leased to other parties. See, Hawaiian Homes Commission Act, §221 and HRS §171-58(g).

b. **Thirty Percent of Revenues to Hawaiian Homes**

Thirty percent of the revenues from the leases must go the Hawaiian Homes to be spent for the benefit of Native Hawaiian Homesteaders. See, Article XII, Section 1 of the Hawaii State Constitution.

c. **Twenty Percent of Revenues to OHA**

Twenty percent of the revenues from the leases must go OHA to be spent for the benefit of Native Hawaiians. See, Section 5(f) of the Admissions Act. Fully fifty percent of the revenues are owed to Native Hawaiians.

BLNR has never appraised the value of the water that it has provided to EMI and HC&S. HRS §171-33(5) requires that before any notice of an intended disposition is given, BLNR must determine an upset price, based upon the fair market value of the resource being leased. BLNR has never done this. BLNR's leases, revocable permits, and holdover permits have all been issued for much less than fair market value, in breach of the public and ceded lands trusts and in breach of their fiduciary duties to their beneficiaries.

The EIS must address the fair market value of the lands and water resources that it intends to lease as determined by an appraisal, so that it can meet its trust responsibilities to Native Hawaiians and the public. HRS §171-17. An EIS shall involve at a minimum "conducting necessary studies." HAR §11-200-14. The EIS must contain this appraisal, as a required study, or the BLNR will not be alerted to the economic consequences of its proposed action.

7. **Any lease of water rights requires a watershed management plan**

Any lease of water rights requires a watershed management plan preventing degradation of surface water and preventing degradation of ground water quality. HRS §171-58(e) and (f). Any EIS must address the current condition of the entire 33,000 acre watershed and determine the steps that are required to restore this 33,000 acre watershed to an environmentally acceptable level.

8. **Downstream Users Left Out of Those Described as Water Users**

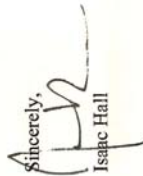

Wilson Okamoto's presentation included a list of users of the water. Oddly, the list failed to include users downstream of the diversions, who have battled for years to have streamflow restored. This is a serious error which, if not corrected, will render the EIS inadequate.

In addition, there are serious errors in Wilson Okamoto's descriptions of all of the streams that are being diverted, all of the petition streams, and restoration efforts to date. Likewise, these are serious errors which, if not corrected, will render the EIS inadequate.

9. Alternatives Considered Too Limited

Wilson Okamoto described approximately three alternatives that would be addressed in the EIS. These three alternatives are far too limited and do not represent the practical and reasonable alternatives that must be addressed in accordance with the applicable statute and regulations. HAR §11-200-17.

Thank you for the opportunity to comment on these issues and for your attention to these important matters.

Sincerely,  
  
Isaac Hall

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Hall:

Thank you for participating in the scoping process for the subject Environmental Impact Statement pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas, your oral comments at the February 23, 2017 EIS Scoping Meeting, and your written comments dated March 10, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the DLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.

3. The Proposed Action is described in Chapter 2 of the Draft EIS, including a discussion in Section 2.1.1 regarding The Department of Hawaiian Homelands' water reservation. The Draft EIS also includes in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on estimates of available of surface and ground water. The Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of surface water that can be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
4. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action, including a Modified Lease Area alternative.
5. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I)
6. For the purposes of this Draft EIS, the stream list used was from the CWRM D&O which is discussed in Section 1.3.4.
7. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the Draft EIS (See Appendix B and Appendix C).
8. The Draft EIS considers an appraisal for the Water Lease and is discussed in Chapter 8.

Your oral and written comments, and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Environmental Impact Statement Preparation Notice  
Proposed Water Lease for the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas  
Scoping Meeting Comments of

Mr. James Coon

February 22, 2017

Maui Electric Company Community Meeting Room

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. COON: Aloha kakou. My name is Jim Coon and I'm speaking as a concerned citizen. I've lived on Maui for almost 45 years and I've lived in Kula for over three decades. My home's on ag. land and I maintain a small orchard on my land. I believe as time goes on, more and more individuals need to plant edible crops to help Maui be more food sustainable. I do believe that EMI is the best entity to manage the EMI ditch system. In my opinion, it'd be a nightmare to turn this valuable resource over to the county or state.

I also want to see A&B have enough water to ensure that diversified agriculture can be viable on their vast lands. What will happen to Maui if there's no agricultural there? Not enough water means less ag. How can we ever meet our needs of energy and food sustainability if there's not enough water? Will it go to development? What about us Upcountry residents if EMI somehow gets taken out of the picture? How will we get our water? EMI must have a lease from the state that ensures that the rest of us continue to receive the water we need.

As you prepare this EIS, please ensure that all parties that need water have an adequate supply, keep EMI as the managing entity, make sure A&B has enough to continue farming instead of massive development.

February 22, 2017

TESTIMONY OF JAMES E. COON SPEAKING AS A PRIVATE CITIZEN

RE: EIS FOR STATE WATER LEASE TO EMI

To whom it may concern:

My name is James E. Coon. I speak as a concerned citizen. I have lived on Maui for almost 45 years and have lived in Kula for over three decades. My home is on Ag land and I maintain a small orchard on my land. I believe that as time goes on more and more individuals need to plant edible crops to help Maui be more food sustainable.

**I believe that EMI is the best entity to manage the EMI Ditch System and they need a long term lease to do so.** In my opinion it would be a nightmare to turn this valuable resource over to the County or State. I also want to see A&B have enough water to ensure that diversified agriculture can be viable on their vast lands.

What will happen to Maui if there is no agriculture there? Not enough water means less ag. How can we ever meet our needs of energy and food sustainability if there is not enough water? Will it just go to development? What about us upcountry residents if EMI somehow gets taken out of the picture? How will we get our water? EMI must have a lease from the State that ensures that the rest of us continue to receive the water we need.

As you prepare this EIS please ensure that all parties that need water have an adequate supply. Keep EMI as the managing entity. Make sure A&B have enough to continue farming instead of massive development.

Sincerely,

James E. Coon

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū  
and Huelo License Areas

Dear Mr. Coon:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas, your oral comments at the February 22, 2017 EIS Scoping Meeting, and your written comments received February 22, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawaiʻi Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued *"right, privilege, and authority to enter and go upon"* the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas for the *"purpose of developing, diverting, transporting, and using government owned waters"* through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Proposed Action and Farm Plan are based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Flow Standards (IFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).

10238-02  
Letter to Mr. James Coon  
Page 2  
September 23, 2019

3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.
4. The Draft EIS will include in Chapter 4 an assessment of the impacts of the Proposed Action. Various technical studies will be appended the Draft EIS and provide detailed examinations, including the Agricultural and Related Economic Impacts Report (See Appendix I), which considers water availability in the Proposed Action and alternatives for agricultural and non-agricultural uses in East, Central, and Upcountry Maui, and an Economic and Fiscal Impact Analysis Report (See Appendix H).

Your oral and written comments, and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

February 20, 2017

To the members of the scoping committee:

### **Support keeping EMI Water transference system**

My Name is Kimo Falconer, President of MauiGrown Coffee, Inc. We are the sole producer of certified MAUI origin coffee on our 400 acre farm in West Maui. Our project is the result of diversification out of sugar production at Pioneer Mill Company in 1992. I was the Vice President of operations of both Sugar and Coffee production when the sugar plantation closed in 1999 and later the coffee operation in 2001. In 2003, I formed MauiGrown Coffee Inc. as its sole proprietor to resurrect that coffee farm. Through much hardship and sweat equity, I am lucky enough to say that today we are the largest individually operated Certified coffee grower in the State of Hawaii.

I am not writing this though to provide you information about myself or my company, nor do I see the need to certify myself qualified as an expert regarding successful agricultural diversification. I do, however, consider myself qualified to speak to the importance, to any future agricultural endeavor, that diverted stream water allows. When these systems were built in the late 19<sup>th</sup> and early 20<sup>th</sup> centuries, water starved areas of these Hawaiian Islands were virtual wastelands. The sugar barons of the time only knew that they needed to move water from the wet sides of the islands to satisfy their thirsty sugar cane fields. The more water they could divert, the more cane they could plant. It was a simple profit driven equation.

What they did not realize was that by moving this water they were in a sense creating, by increasing the aquifer recharge ability, a usable reservoir of fresh water underground where before it was simply a brackish lens of infiltrated seawater. After 140 years of this activity the central isthmus of Maui has a healthy aquifer with differing levels of salinity that is not toxic for irrigation use for many crops. But this recharge will stop should the EMI flow stop. This recharge does not happen in those dry areas naturally, otherwise it would have happened centuries ago. As an example, when Pioneer Mill closed, albeit a smaller plantation but one that relied heavily on the recharge aquifer underground for irrigation, the salinity levels climbed instantly after the plantation closure to levels today that would be unsuitable for irrigation.

The HC&S issue is a different animal. At 36,000 acres, satisfying Maui's food needs can be achieved on less than 5% of those. Never mind Pioneer Mill, since 1999 that land has already been cut up by development. The general plan calling for thousands of more homes and urban growth and no one not living on the West side even knows that.

I am the only farmer of decent size on the West Side. My family has been in Lahaina for generations. While I wish to grow more coffee here, the loss of water and urban pressure is forcing me to look elsewhere.

Coffee is a very good crop for expansion throughout Hawaii. I am currently talking with A & B to possibly expand on former HC&S cane lands. For this to be possible there needs to be assurance of water. This holds true for any agricultural plan that is wishing to do the same.

While assessing the EMI situation in terms of water need, don't overlook the power of a healthy underground water system. Just because one can't see it, does not mean it is unimportant. Should you allow the stream diversions to stop, the irony is the future of our water supply can only come from them in the end.

James 'Kimo' Falconer  
President  
MauiGrown Coffee, Inc.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Falconer:

Thank you for participating in the scoping process for the subject Environmental Impact Statement pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated February 22, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued *"right, privilege, and authority to enter and go upon"* the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the *"purpose of developing, diverting, transporting, and using government owned waters"* through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui. The environmental impacts of the potential Water Lease will be assessed.
2. The Draft EIS discusses impacts to hydrology associated with the Proposed Action in Section 4.2 of the Draft EIS as well as the reports various technical reports prepared for the Draft EIS, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSheP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); and Terrestrial and Flora and Fauna Report (See Appendix C); and. Agricultural impacts of the Proposed Action and alternatives are discussed in the Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Honolulu, Hawaii 96826  
March 10, 2017

Dear Mr. Matsukawa;

I am writing in response to your request for public comment with regard to the proposed 30 year lease, by your client, of the public trust water resources that would need to be diverted from East Maui to the land they own in the central valley.

Let me say at the outset that I oppose the proposal. I have reviewed and agree with the comments you have already received from The Native Hawaiian Legal Corporation, and the attorney Isaac Hall, whose views I am

fully aligned with.

Rather than repeat what has already been so clearly explained, I wish to offer a few additional recommendations for your consideration.

As hopefully has become clear to you already the further allocation of these vital resources to your client is not supported by the community, and for good reason. Many of us feel that the company has not fulfilled it's trust responsibility for the resources it exploited for the benefit of it's shareholders as defined by the State Constitution. Additionally, as cited in the statement of Isaac Hall, it would be my position that the 30% of the gains to the company during this period, due under State Law to the Native Hawaiian community have not been paid. This represents a significant additional responsibility that your clients will need to address before their application for more water is even considered.

Additionally I am of the firm belief that an inventory of the state of our island's waters would need to be done to properly assess the degree to which they may have been polluted or contaminated by your clients' actions. To me, if such a study were to be done, and chemical contamination of these vital resources found on the land your client has been utilizing, that payment for the full complete remediation of these harms would also need to be addressed before any further allocation of new leases or rights could be considered.

Lastly for the company to begin to address the harms caused to the original inhabitants of these islands and their descendants from the time of the "annexation" of these islands (as recognized by the United States Government, Public Law 103-150), it's time for the company look at giving back (as opposed to taking even more from) the local community.

In this regard I would recommend the low cost transfer of land, with small housing construction subsidies to those who prove Native Hawaiian ancestry, for the purposes of sustainable, traditional Hawaiian farming practices to feed the island's residents. This would be a far, higher, more just and more humane "transition" than what has been requested in the proposed lease.

If any of these proposals would be of interest to you and your client to implement I would be happy to serve as a consultant (along with others I

could recommend) as to how this could all be accomplished.

Sincerely;  
Jeffrey Bronfman  
President of The Aurora Foundation and  
Co-founder of The Haiku Aina Permaculture Initiative  
Haiku-Hawaii

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Bronfman:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 10, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Cultural Impact Assessment (See Appendix F); and Social Impact Assessment (See Appendix G). Section 4.7.3 of the Draft

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

10238-02  
Letter to Mr. Jeffrey Bronfman  
Page 2  
September 23, 2019

EIS will address the amount of past revocable permit proceeds that have been allocated to the Office of Hawaiian Affairs and the Department of Hawaiian Home Lands

3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

Jette Slater

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū  
and Huelo License Areas

Dear Jette Slater:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas and for your written comments dated March 5, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawaiʻi Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued *"right, privilege, and authority to enter and go upon"* the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas for the *"purpose of developing, diverting, transporting, and using government owned waters"* through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the Draft EIS (See Appendix A and Appendix C). Sea Engineering, Inc. and Marine Research Consultants, Inc. also prepared the East Maui Irrigation Assessment of Streams and Oceans Water Chemistry report (See Appendix B).
3. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Management's (1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I)

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

cc: Suzanne Case, Chair, Department of Land and Natural Resources

**Environmental Impact Statement Preparation Notice**  
**Proposed Water Lease for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas**  
**Scoping Meeting Comments of**

Mr. John Gelert

February 22, 2017

Maui Electric Company Community Meeting Room  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. GELERT: Hello. My name is John Gelert and I'm a resident of Kihei. I've been a Maui resident for seven years. I would like the IIFS to address the needs of Native Hawaiian farmers and also the environmental concerns. So I believe that every stream should allow at least some water to go to the ocean to take care of the needs of these -- so that the environment is healthy and that the Hawaiians have more than enough for taro and other needs. As far as the rest of the water that is diverted, I fully support use for only agriculture with the exception of what is needed already for Upcountry.

And also the court did say that -- that the water is not allowed to be diverted any more, but then A&B and their lobbyist got the legislature to overturn that, so that is -- that is wrong and this water should not be going to A&B. This is the people's water and we need to have more sustainable agriculture here in Hawaii, so I would say whatever amount that is determined by the IIFS, it should be subject to review as more and more farming is actually done, but never to totally divert all of the water from any stream.

FACILITATOR SENELLY: Thank you. And just for clarification, the ES and the IIFS process are parallel processes. So there's things that found in the EIS, the -- actually, the IIFS will be -- that decision is not going to depend on what the EIS is.

Am I correct?

But we also understand the things that you said you want to see studied in the -- we'll just make sure it's in the EIS, that portion of it.

MR. GELERT: Thank you.

**Subject:** EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Wilson Okamoto Corporation,

As you know, BLNR has tasked A&B with the job of commissioning a consultant to prepare an EIS for its proposed 30 year Water Lease for East Maui streams which, if granted, would give A&B the continued "right, privilege, and authority to enter and go upon" the Nahiku, Ke'anae, Honomanu, and Huelo License Areas.

Because A&B is in charge of procuring the EIS, I am worried that it will not include a thorough study of both the full environmental impacts and alternatives to a 30 year lease. It will also give A&B an unfair advantage if and when the lease goes up for public auction, as it is legally required to do so. By tasking A&B with commissioning and paying for the EIS, this government process has lost legitimacy because it appears slanted in A&B's favor.

To remedy this, I request that the DLNR instead pay for and direct the consultant for this EIS. Only if this is done will core parts of the EIS - the definition of the current environment and the identification of alternatives - be comprehensive and encompass all the possible outcomes for the management of these waters and areas. This will also help instill trust that the completed EIS will be impartial and independent of A&B's specific wants.

No matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on aquatic stream life and Native Hawaiian cultural practices. The EIS should also explore multiple alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. It is important that this long-awaited EIS is done correctly, which means the process should be directed and paid for by DLNR and include

a thorough analysis of all possible impacts from and alternatives to A&B's proposal. I ask that DLNR take direct control of this process as soon as possible.

Mahalo for your time.

Sincerely,  
John Gelert

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Kē'anae, Honomanū  
and Huelo License Areas

Dear Mr. Gelert:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Kē'anae, Honomanū, and Huelo License Areas, your oral comments at the February 22, 2017 EIS Scoping Meeting, and your written comments dated March 10, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Kē'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

10238-02  
Letter to Mr. John Gelert  
Page 2  
September 23, 2019

(HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.

3. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Proposed Action is based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
4. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action, including discussion of alternative lease terms, duration, volume, water sources, and ownership.
5. Trutta and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
6. For the purposes of this EIS, diversion quantities from the CWRM D&O were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
7. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

10238-02  
Letter to Mr. John Gelett

**Environmental Impact Statement Preparation Notice**  
**Proposed Water Lease for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas**  
**Scoping Meeting Comments of**

Ms. Joycelyn Costa

February 22, 2017

Maui Electric Company Community Meeting Room

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MS. COSTA: Hi. My name is Joycelyn Costa. I'm the moku representative for Hamakualoa, but I'm a descendant of Nāhiku Mokuula on Makapipi. And my father, I'm sure you're going to meet him tomorrow, he's 81, he was from Nāhiku, his mother was born and raised in Nāhiku, her father was born and raised in Nāhiku, his father was born and raised in Nāhiku, he was taken to Kalaupapa.

I would like to see the original lease, I'm talking from the 1800s, if there even is a legitimate lease, before we even move forward. I would like to see critical data not of today, because we've already had too much damage and dewatering of a lot of the streams for you to even begin to measure it. So it needs to be from the beginning, not from the middle, not from the current, but from the beginning so you get accurate data.

I have to disagree a little bit with my good friend Darrell Tanaka that not every stream should be restored because there was a reason in Alexander & Baldwin he found it to be a waste which is why he decided he needed to capture all of this water and send it central. And if you go with the rule of nature, with the law of nature, it is essential when we worry about if we're underground springs and catchments underground that feeds wells are going to be able to hold the carrying capacity for elsewhere, the percolation that will be created through the restoration, you know, has anybody done a study on that? Can we -- can we restore the lands again to a more healthy environment? It's missing.

I find it really ironic that we don't have money, we don't have the resources for something more critical than a rapid transit rail, but we can find billions to put a piece of steel and concrete not even halfway around an island. So we need to reevaluate what is important. Economically, the water restored to the taro patches will be better for the state.

My father equates a bag of rice, a lot of people in here eat a bag of rice, it'll last you maybe -- depending on the size of your family, a week, week and a half, cost you ten bucks. Buy a bowl of poi for the same amount, can't even feed the whole family. So multiply that to feed the family for a week and a half equivalent to that bag of rice, you've got a major economic rally, but nobody talks about it. The fish, the ocean is key if we look at -- 'cause everyone stops at the taro patch, that's okay, but if you go all the way to the end user, then at least you have a more thorough assessment. Nobody talks about that.

And as far as environmentally conscious, you look at endangered species, the state considers a Hawaiian person to be 50 percent. My father is an endangered species, there's not many left, so you guys need to protect him too. That needs to be included in the EIS. I love what this young lady said, you need to put

the people, the sense of place, of the people of this place in that EIS considered, not just -- not just the river, not just the stream, not just the pohaku, not just the trees, not just the birds, but the actual human that cohabitates here.

**Environmental Impact Statement Preparation Notice**  
**Proposed Water Lease for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas**  
**Scoping Meeting Comments of**

Ms. Joycelyn Costa

February 23, 2017

Ha'ikū Park and Community Center

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MS. COSTA: Joycelyn Costa. First of all, I would like to address the purpose of the EISP. The purpose of the EIS process is to disclose to government agencies, the general public, stakeholders and decision-makers the anticipated impacts. I'd like the impacts to be started from the inception. I would like that to be included. I'd like to know the timetable and dates to determine these anticipations. I'd like to know why the kuleanas were omitted from this process. It's not in this process. And I would like to know what will happen if they're -- when they discover all of the irreparable harms that has already been done. I think it would be too incomplete if you started with anticipated impacts. Within the impacts, will you be studying the soil, surface water, cultural resources, and coastal waters measured from inception?

Will the data include significant knowing -- not of outside book knowledge -- to make a determination? Everyone knows who writes the book tells the story, and we have living generations that are of knowing, that have survived the direct historical impacts. Please include them.

As far as page 1-1, the description, description of the purpose, "Background:" Since 1878, A & B or its predecessors and EMI have held various -- blah, blah, blah -- permits. And use of water from the State lands, please correct them. It should reflect that the lease came from the Kingdom of Hawaii. There was no such thing as State land in 1878.

Also I want to propose, in accordance to 1.2 "Approval," meaning the direction of consent, include the consultation of the representatives for all affected areas that will not only provide but receive water included in this EIS. We should be part of the consultation board. We shouldn't be on the outside, speaking into the EIS. We are part of DLNR.

So I think it would assist in your scoping if you were to have each representative be a part of this process. And on 1.3, "Proposed Action." And so I just briefly went over this, but I'm going to be doing more extensive written. Okay. A correction and/or addition to the fourth sentence of your 1.3. "Purpose of developing, diverting and transporting the use of government-owned waters." It should read "kuleana waters" only.

**Subject:** Re: Proposed Lease for A&B from Nahiku, Keanae, Honomanu and Huelo

Thank you for confirmation.

If I could I would like to also include:

Data to impact of shoreline life and the impact that may have lead to the decline in fish possibly affecting a bag limit on the Native Hawaiian way of gathering.

Perhaps there could be other ways to share the water as written in the Kanawai also referred in the State Constitution of Hawaii. Instead of looking at the quantity and volume we find a more cohesive way to live with the water. I would suggest "Time". Within the original leases there was an understanding of time for use. Knowing the Kalo required temperature for proper health the water from the rivers and streams ran to the ocean from 4am-4pm. From 4pm-4am the plantation ie ditches could take what it needed.

Thank you for this consideration.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Keʻanae,  
Honomanū and Huelo License Areas

Dear Ms. Costa:

Thank you for participating in the scoping process for the subject Environmental Impact (EIS) Statement pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas, your oral comments at the February 22 and 23, 2017 EIS Scoping Meetings, and for your written comments dated March 9, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawaiʻi Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued *"right, privilege, and authority to enter and go upon"* the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas for the *"purpose of developing, diverting, transporting, and using government owned waters"* through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.
3. Section 2.1.5 of the Draft EIS discusses the phasing and timing of the Proposed Action.

Mr. Justin Tombe

February 22, 2017

Maui Electric Company Community Meeting Room

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. TOMBE: Justin Tombe. Water is life and when we're talking about it here like a lease and we're making agreements, we're reviewing ones that have been made like it's an economic commodity and that's okay, but that process is incomplete if we don't remember, right, that it's more than that. So this process, I want to invite everybody participating in this process here all the way through to remember to stretch further than just the legal considerations; otherwise, we're failing our responsibility to the generations. Okay? That's how I feel it in my heart.

The vision of how you steward the land and the water together has to be considered in this process. Right? So it's not just water goes to someone for 30 years, they get a sign off and an agreement and a fee. It's like what's the land use that it's going to be used for? Specifically how is that vision articulated? I think 30 years, again to echo, is too long of a process. Five years, one year at a time if that's what it takes to figure it out. And you can't do that without accountability of the past, what has happened. Now someone step away from the awaas in the shape that they're in and now that it's kind of falling apart and they've made their money and they've exported all these crops with the water embodied in it and all that wealth off the island, and now they're gonna step away, no responsibility to take care of what's behind? No. That should be addressed, that should be a part of this as well. Okay? So accountability.

And then for me, like I got a little chance living over in Huelo on the Hoolawa to do a little pilot project, an eco village in an ahupuaa kind of style. Right? And so what that was, what is that, it's a vision of how the land should be organized and used, how to steward the water all the way through. Okay? So if it's going to end up being in a golf course and there's nitrate fertilizers being dumped on there and there's organophosphate pesticides sprayed on it and they're gonna end up in the ocean and the fish, is that -- like if we can't address that here in the use process, then we're not really doing the job.

And so I want to know from A&B what's their 30-year vision, what do they see, where is this going, how is this going to get used much more articulated. And I love hearing -- thank you so much -- like stream-by-stream impact. That's the kind of granularity, that's the kind of attention to detail, that's the kind of responsibility that this EIS process really needs to try and address even though it's beyond its scope a little bit.

FACILITATOR SENELLY: Okay. Future uses, you mentioned, to my -- there is no golf course. I mean, you mentioned that and it's just I kind of want for the record that you know, we're talking about existing uses in the central plains and all that kind of stuff.

Scoping Meeting Comments of Mr. Justin Tombe

Page 2

February 22, 2017

MR. TOMBE: So diversified agriculture.

FACILITATOR SENELLY: And diversified agriculture.

MR. TOMBE: Right. So that's poly-culture, no more mono-crop, monolithic institution. I'd like to see some addressing of what the land use looks like that makes room for small-time agriculture producers. I'd like to echo that again.

FACILITATOR SENELLY: Okay.

MR. TOMBE: For sure. Yep. And put a plug in also, you know, if there is a place for a pilot project for industrial hemp to find its place on Maui here as a medicine, as a food source, as an industrial product, then that's something that really ought to be part of that looking forward too.

FACILITATOR SENELLY: So different types of agriculture, not monolithic. Okay.

MR. TOMBE: Yeah. Absolutely.

FACILITATOR SENELLY: You pau?

MR. TOMBE: Absolutely. Mahalo.

Mr. Justin Tombe

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Tombe:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your oral comments at the February 22, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued *"right, privilege, and authority to enter and go upon"* the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the *"purpose of developing, diverting, transporting, and using government owned waters"* through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Ma'hi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.
4. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action. Various technical studies will be appended the Draft EIS and provide detailed examinations, including an Agricultural and Related Economic Impacts Report (See Appendix I) and an Economic and Fiscal Impact Analysis Report (See Appendix H).

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

10238-02  
Letter to Mr. Justin Tombe  
Page 2  
September 23, 2019

Your oral comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning  
cc: Suzanne Case, Chair, Department of Land and Natural Resources  
A&B / EMI, Applicant

**Environmental Impact Statement Preparation Notice**  
**Proposed Water Lease for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas**  
**Scoping Meeting Comments of**

Mr. Kaleikoa Ka'o  
February 23, 2017  
Ha'ikū Park and Community Center  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. KA'EO: Aloha. First of all, I'd like to just say exactly what has already been said, which is I find it strange that this isn't being heard, first of all, in Hana or Keanae, first of all. And that's a clear sign or a sign to the community that we're being set up. So I don't know what the intentions were perhaps, but it's clear to us that the community wasn't looked at first.

So I want to start off by making clear, this I think has to be clear, is that this EIS needs to be careful in making sure it has the correct historical, political, economic and cultural history of Koolau and East Maui, not one that provides a settler, colonial mentality of justifying how we got here. But let's be clear, because there's a lot of great historians out there. So the EIS has always failed to do that, so I want to make sure that you get somebody that knows the history of this area, and that's up front at the very beginning, prior to the taking and stealing of the water from East Maui. So let's not start with when the water was taken. Let's start with how the water was managed for many, many years, and generations, let me just say.

You know, our people has been here for 2,000 years, for many, many generations. So we're not Johnny-come-Latellies into this area. However, when you look at this process, the fact that the EIS is looking on a 30-year lease extension, extension, these are extensions for the continued stealing of this water, that's the starting point, not the starting point says this water belongs to the people of East Maui. That's who it belongs to. And if HC&S, A & B, EMI, whoever they are, want that water, they should bring their plans to the people and prove to the people. This process, it's backwards, it's backwards. We gotta defend ourselves to go prove that that's our water. This is part of the confusion. That's why for me, it's very important we start with that point. And that's why I'm wondering why hasn't it started at that point. I can go straight to the EMI administration and the State process, which wants to continue business as usual. But I'm here with many other Hawaiians, and we say no more. No more we allow this to occur.

So I want to make sure that we have a correct political, economic history that's at the forefront and that we have a true Hawaiian historian involved at the forefront. Secondly, let's make sure -- we talk about this EIS, but it also does a terrible job in explaining -- not the potential impacts, but let's look at already what the impact has already been for over a hundred years. The degradation to the environment. Let's ask how much billions of water has been taken out of East Maui already? Billions. Every year, we talking billions that they take. Well, how much? What is the total?

What have been the effects of the (Hawaiian) already that have been killed off? We're not talking maybe might kill. We're talking already has been wiped out in many of those streams that used to run

every day. That's an environmental crime that has already occurred. For me, it was just a crime, before we talk about continuing crime.

Secondly, let's also look at its effects already. How much fish has already been lost? How much shellfish? What degradation has already happened to the fisheries that depend on their fresh water to go into that stream, to get the smaller fish, to get the bigger fish and the limu. What has already been the destruction that people pretend as if -- see, people believe this is the normal state as is now. This is not the normal. This is the abnormal. This is what happens when corporate mentalities comes in and rapes the land, destroys the land. So let's make sure we tell the right story. Let's tell the true story. And during the course, water has already had many impacts upon the community, the Hawaiian community already, who lost, lost food sources already, who has cultural practices already because associated with those streams, have already been harmed.

In other words, that has already been done. Let's recognize the ea first. We cannot talk about what we gonna do if you don't recognize that So let's start with that and understand what are the crimes that have already been against the native Hawaiian people. Because these are crimes against humanity. And that brings me to the third point. We should also be clear to understand what is going on between the lahui kanaka and native Hawaiian community. We are no longer afraid to speak and say we demand our human rights as human rights, our humanistic rights as an occupied people by the military foreign power that continues to exist and allows these kinds of crimes against humanity to occur.

So I want to make sure in this report we also investigate all of those things. What are our rights as native Hawaiians internationally, our human rights, our humanistic rights? You know, look at things like the UN resolution 1514, look at the Proxmire Act. These are all international covenants that are already there to protect the rights of not some human beings, but which human beings? All human beings. And I therefore would say, you know, Hawaiians, we are human beings. And therefore, we deserve the right of a state agency that will make sure, even on international law, our rights are protected.

Number four, all I'm going to say is remember Maunakea. Maunakea is occurring today because of the failure of the EIS, the EA cultural impact, all those kinds of impacts that was ever done. Even when the people came out and drove, testified against it, didn't matter. No. The State of Hawaii, the University of Hawaii went ahead anyway, anyway. And you saw what happened recently in the past few years. There's an uprising.

So part of this should also address what happens when you say yes, what happens when you say yes to A & B. You guys should be prepared to know that you gotta deal with all these Hawaiians. You guys should understand, you guys should address that question, because you're going to have to deal with us in the courts and every Planning Commission meeting. Anything to do with the taking of our water, our people gonna be there. And so these are some things even outside of the courts we gotta realize, because at some point, we as Hawaiians understand sometimes we need to stand, sometimes we need

to defend. And I believe that's something that the EIS should address by looking at examples, Maunakea and like Haleakala. It's really the same BS that's going on. The rights of developers, settlers, colonizers, investors, land speculators, are treated as if they're some golden child that needs to be protected, and our concerns as the people of this land is thrown to the wayside, our commentary to the side.

See, I understand. I've been coming to this thing for many, many years, and I've seen a whole lot of meetings. But you might even have 99 percent of the people testify against something. And what does the EIS say? Oh, let the project go through. So the point I'm trying to say, we let fools come in here and participate, but we get asking, we get demanding, and we're here also to declare that we will do whatever is necessary for us to protect our resources to return the water back to the community where it starts. If any water should be taken from the community, it's for the community to decide, first of all. So I just want to say mahalo to you guys for coming and giving us the opportunity to share. But at the same time, I would say this to everybody here: Our voices, whether one word or a thousand words, are all important.

Because it's for us, it's for us to decide for ourselves what is this for ourselves. It's not going to be the government, it's not going to be the Board of Land and Natural Resources, it's not going to be land speculators from outside, because in the end, it's going to be us.

So if the EIS doesn't listen to these voices, I blame the EIS for not listening to the voices of our people. Mahalo.

10238-02  
September 23, 2019

Mr. Kaleihoa Ka'eo

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Ka'eo:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and your oral comments at the February 23, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. Section 1.3.4 of the Draft EIS discusses the Commission on Water Resources Management's (CWRM) Interim Instream Flow Standard (IIFS) Decision and Order (D&O) and the authority of the BLNR to issue a Water Lease for non-instream uses pursuant to Hawai'i Revised Statutes § 171-58, that is subject to the IIFS set by CWRM.
3. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the D&O were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

4. Cultural Surveys Hawai'i, Inc. prepared a Literature Review and Field Inspection report of the License Area (Appendix E) as well as a Cultural Impact Assessment (Appendix F) in support of the Draft EIS. These studies are discussed in the Draft EIS in Section 4.5 Historical and Archaeological Resources and Section 4.6 Cultural Resources.
5. Section 2.1.2 of the Draft EIS discusses the amount of water diverted by the EMI Aqueduct System during sugar cultivation.
6. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action and alternatives on indigenous freshwater species, and terrestrial flora and fauna, respectively. The Draft EIS discusses the impacts of the Proposed Action to freshwater species in Section 4.2.1 and impacts to terrestrial flora and fauna in Sections 4.4.1 and 4.4.2. Both reports are appended to the Draft EIS (See Appendix A and Appendix C).
7. Sea Engineering, Inc. and Marine Research Consultants, Inc. prepared an assessment of streams and the ocean water chemistry in support of the Draft EIS. The Draft EIS summarizes this assessment in Section 4.2.3. The report is also appended in the Draft EIS (Appendix A).
8. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I)

Your oral comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

**Scoping Meeting Comments of**

Ms. Kamalani Pahukoa

February 22, 2017

Maui Electric Company Community Meeting Room

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MS. PAHUKOA: My name is Kamalani Pahukoa. Mahalo for everyone for coming and I respect everyone's comments from our country farmers to, you know, our residents and commercial users and everybody. I'm from East Maui, I'm from Keanae. I mainly come here today to give specifics on what I think the EIS should address, so I'll get to it. So East Maui streams holds one of the world's most diverse ecosystems and native species, mollusks to arthropods and vertebra. I ask that you honor the recommendations of our state biologists, scientists, Hawaiian practitioners, and Maui community. It is crucial that habitat mapping would be incorporated into the environmental study.

I'd like to see the estimated amount of water that is wasted from the diversions. The leakage of the water from diversions have proven to contribute to landslides in some areas of the Hana Highway. Without these studies it's hard to explain to our highways engineer the detrimental effects of waste water from these diversion pipes, the effects it can cause to erosion and landslides and whatnot. The erosions of some areas along the Hana Highway are from natural material like water; however, they are caused by unnatural waterways also known as EMI's diversions. Maintaining the natural patterns of water flow and streams is the single most important requirement for protection of native Hawaiian stream animals. So I guess what I'm saying is I'd like you to be very specific and broad in your habitat mapping for the EIS. I'd like --

FACILITATOR SENELLY: What do you mean, "specific and broad"?

MS. PAHUKOA: Everything.

FACILITATOR SENELLY: Okay.

MS. PAHUKOA: I'd like to see that -- I know there's random -- it's called random --

FACILITATOR SENELLY: Sampling?

MS. PAHUKOA: -- sampling, yeah, and random insect monitoring and whatnot, but I'd also like you to consider our ecosystems, the forests, oopu, hihiki, and everything that flows upstream. I'd like you to conduct the EIS not just below the water diversions, but above.

FACILITATOR SENELLY: Okay.

Scoping Meeting Comments of Ms. Kamalani Pahukoa

Page 2

February 22, 2017

MS. PAHUKOA: And so to wrap it up, I hope that everyone can come out to tomorrow's meeting because I know there's a lot more East Maui residents that will be able to attend tomorrow's meeting as opposed to today, 'cause it's kind of far and (inaudible) and whatnot.

But I ask that all records of the EIS and data collection regarding East Maui streams be made public and updated weekly as important data collection become available. So if that's something that can be done, I'd like that to be done, you know, as soon as that data becomes available, as soon as possible. Other than that, I just wanted to state that I don't support EMI obtaining this lease. I think that the county has the resources to manage these diversions on our own. I think that the community has the power to manage the diversions on our own. And for people to be relying on A&B and EMI is kind of a -- you know, we should just have more -- we should have more -- we should more respect to those who have been managing these ahupuaas since -- for several generations. I mean, sustainability has been out there since the beginning and in these streams from Koolau, from Hana to Haiku and Huelo. So for people to say that we have to only rely on A&B is kind of -- it's not right, yeah, because Hawaiians have been managing our water resources since the beginning.

So I just wanted to say that and thank you guys for your time. Thank you, everyone, for coming.

Ms. Kamalani Pahukoa

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Pahukoa:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your oral comments at the February 22, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued *"right, privilege, and authority to enter and go upon"* the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the *"purpose of developing, diverting, transporting, and using government owned waters"* through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. Trutta and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
3. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
4. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the

**Proposed Water Lease for the Nāhiku, Keʻānae, Honomanū, and Huelo License Areas**  
**Scoping Meeting Comments of**

Ms. Kamalu Kaho Okele

February 23, 2017

Haʻikū Park and Community Center

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MS. KAHU'OKELE: I would like to start by reading something that disturbed me very much. This is a proposed action from A & B. The proposed action constitutes the issuance of one long term of 30 years, water lease from the DL BLNR for the continued right -- now follow me, my people -- the continued right, privilege and authority to enter and go upon the Nāhiku, Keānae, Honomanu and Huelo licensed areas for the purpose, for the purpose of developing, diverting, transporting, and using government-owned waters. The water is owned by God. Excuse me.

Through the existing EMI is Maui irrigation aqueduct system, which supplies water to domestic and agriculture water users. I just thought I'd share that. And by the way, (Hawaiian name), founder and president for the past 11-plus years for the Lower Nāhiku Community Association. why was this information not sent, e-mailed, mailed, to the Nāhiku Community Association or the residents of Lower Nāhiku, informing them on the proposed application, EISPN, for A & B's 30-year water lease. Mahalo to Dick Mayer, Alliance of Community Associations, for sending this information to us or we would not have known of this matter earlier on.

Why was the Hana District not included in these public meetings involving East Maui streams? Speaking on behalf of my ahupuaa of Lower Nāhiku, and for our streams and diversions from (Hawaiian), remember what I just said. The true name of Makapipi is (Hawaiian), better known today to everyone as Makapipi River. Kopiliula and Hanawi, of which currently flows from the Koolau, down through our (Hawaiian). You don't hear that no more, because today they call it the landing, the Lower Nāhiku landing. This is where these streams (Hawaiian.) There should be no more diversions, people. All waters should be returned to each and every ahupuaa, for it is their streams; it is their livelihood; it is their battle of survival; it is their (Hawaiian) of healing.

Requesting a 30-year long-term lease would be very damaging to our community. We all know that since the closing of the sugar cane plantation, no firm decisions have been released or open for public review on their so-called diversified ag. There was talk about in the absence of sugar. Just talk? Instead they are selling sugar cane land to developers from anywhere. For what, I ask.

As I review the EIS information -- here, hold this; you need a podium, honey -- provided by the County of Maui Water Supply could become promised and that the 30-year lease will enable A & B to continue to maintain the aqueduct systems that is currently maintained by EMI. The County should maintain it to provide domestic water to Nāhiku and not have a third party dictate the control of this water source for our community of Nāhiku. Remove all metal gates -- which I know what they look like, I've been up

there, walked the road -- and have all streams returning to its full capacity. Also cap, close, remove all diversion systems that moves water from Makapipi to Hanawi and so on. The County Water Supply should lease or maintain the aqueduct that supplies water to the County, water tanks that currently supply Lower Nāhiku with domestic water, farming water, (Hawaiian) animals, yeah. They gotta drink water too, not only from the rain.

In closing, A & B, the applicant, needs to be fully transparent on their intent, their needs, their wants, and not smoke-screen and quietly do things to further divide the communities as they did with HC&S, I believe that our kupuna (Hawaiian) will guide our pathway, to be sure that our precious resource isn't solicited for their money gain, while our entire livelihood and quality of life is jeopardized. We must protect, preserve and perpetuate for the future generations to come. Our voices now and forever will be heard, as we cannot sit here no longer and watch our island become more overly developed, culturally desecrated, and our lahui is left behind, and not have a voice to our island. We will stand for what is right, and the right thing is to maintain truth and not deception. Just to add, it's not just the water that is life; it's the mana that the (Hawaiian) hold from the days of our not ali'i, (Hawaiian), for it holds that strong (Hawaiian) of our ancestors. I close by saying much of our (Hawaiian) throughout East Maui is (Hawaiian) with debris, fallen trees and not maintained for proper flow from mountain to sea. What are we going to do about that? Is it only about power, money, and greed?

Let us think about it. Mahalo.

Email: [ian.e.hirokawa@hawaii.gov](mailto:ian.e.hirokawa@hawaii.gov)

Phone: 808-587-0400

Address: Board of Land and Natural Resources-1151 Punchbowl St., Honolulu, Hawaii 96813

To Whom It May Concern:

We the Nahiku Community Association Strongly OPPOSE this applicants request for a 30 year water lease of East Maui Land and Water Lease and that the State of Hawaii (BLNR) should deny this applicants request till matters that has been brought forward by testimony in the last 2 meetings held on Maui is clarified and that Alexander & Baldwin is transparent and has fully disclosed the affirmed use of the sugar cane land that is now not in use and not just a proposed use map that has been issued and distributed which really does not affirm the confirmed use. It's quite clear that the intent of A&B while the last plantation was being closed that 339 acres of sugar cane land was sold in Paia, Maui, and now a new shopping center in their Kahului Industrial Park is quite the obvious that as they develop and or sell off these lands water will be in higher demands to accommodate the land use and the question is when the proposed diversified agriculture rolls in to play more water will be diverted to cover all aspects of their intentions.

It's concerning to us on how the notification of this EISP/N was NOT distributed either by mail or other written notification to the residents of Lower Nahiku and was not even included or notified of this request earlier on as others had the opportunity to have and early consultation process.

1

Also, We would like to have comment by CWRM on the current status of the IIFS standards as we were advised earlier on the Makapipi and Hanawi streams will have a mountain to ocean flow all year round and how would this lease impact the status of the rivers on the their decisions increase or decrease the current flow release for the next 30 years

We have requested that Hana District of East Maui have the opportunity to meet on this applicant's request and should not have been excluded from this process.

#### ALTERNATIVES:

Allowing the County of Maui DWS have the opportunity to take on the Aqueducts that supplies 3 main water tanks to continue the domestic water for the Nahiku Community and to maintain it for that purpose only and remove these two rivers from the applicants request for lease. So we the community of Nahiku can continue to gather and to avoid the damaging ecological impacts that this lease can cause to endanger to wildlife and cultural quality of life for the people of Nahiku as it did for generations. Our rivers should not ever go DRY because of excessive development use and a full-continued full flow all year round. As A&B has a current year to year lease with the STATE OF HAWAII for the next 3 years it should remain as such to maintain the current use and a more formalized confirmation on the use of all that sugar cane land that they have submitted just a proposed plan and no confirmation on if diversified AG will ever happen.

We believe that the water is the source of life and should not be controlled by A corporation for their long-term benefits but for the people of Maui and the future generations. We have so many concerns on its current use and how we can better distribute water during drought periods that really have not been addressed and the ongoing current concerns on water meter issuance on the COUNTY level, We cannot have further back logs on the current needs to be fixed NOW then to give A & B that control on the WATER SOURCE for further control or more unwanted development of Maui Island and for any one else for that matter until the current situations are addressed.

We would appreciate a continued notification on developments on this measure and if the recommendation we have listed will be addressed at a EAST MAUI HANA MEETING and or further discussions on applicants request for lease, and or when further actions are taken on the applicants proposed permit application as it goes under review by BLNR.

Sincerely,

Kamalu Kaho'okele, Founder/President

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū,  
and Huelo License Areas

Dear Ms. Kaho'okele:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas, your oral comments at the February 23, 2017 EIS Scoping Meeting, and your written comments dated March 1, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued *"right, privilege, and authority to enter and go upon"* the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the *"purpose of developing, diverting, transporting, and using government owned waters"* through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.
4. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

10238-02  
Letter to Ms. Kamalu Kaho'okele  
Page 2  
September 23, 2019

be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I)

5. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the Draft EIS (See Appendix A and Appendix C).

6. The Office of Environmental Quality Control, State of Hawai'i, Department of Health (OEQC) is responsible for the processing and publication of Environmental Assessment and Environmental Impact Statement documents. Pursuant to the requirements of Chapter 343, HRS, the subject EISPN document was made available for public review and comment. Similarly, the forthcoming Draft EIS will also be made available for public review and comment.

Your oral and written comments, and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Earl Matsukawa, AICP  
Vice President, Director of Planning

Testimony by Kathy Pang  
February 23, 2017

My family has been in Hawaii since the 1890's and we were finally able to call ourselves landowners on Maui, when my grandparents were able to move out of McGerrow Camp around 1940. We don't have such a long history, but we do call this home, in every meaning of the word.

As residents of West Maui, we finally reached the end of about 7 years of testimony and hearings to get surface water rights in the Na Wai Eha contested case process. The Richardson School of Law Ka Huli Ao provided legal assistance. In the end, people who were granted rights to surface water were those who had the strongest legal claim to water, either historical, with ownership or continued farming dating back to the Mahele. In our case, we have no legal claim because Wailuku Water has a clause, slipped into our deed that extinguished our claim to water, even with 'auwai running through the middle of our land.

Should it come to this in East Maui, be warned the fair distribution of water, even to existing users is never to be taken for granted.

Governor Ige has set a goal to double our food sustainability by 2020. We need to dedicate water for this, not just "put it out there" and hope it will happen. How does his state Department of Agriculture have 122 job vacancies unfilled, and pretend that we support agriculture? We need to have true action by our government

Back on topic, I believe that the proposed EIS should include:

KSP 1 of 2

1. Information about exactly how much water there is in the East Maui system, prior to, and after removal of diversions. We seem to have a lot now because HC&S has quit operations. Maybe this is a false sense of plenty, and there is not that much left for diversified agriculture.
2. Information regarding how open ditch systems are to be maintained (in addition to who will carry this out). What chemicals, and how much needs to be applied to A: keep the edges clear and 2B: how often flow has to be stopped to apply the aquatic formulation of Roundup or something similar, to keep the vegetation under control?
3. An evaluation of the required amounts for different uses of water. It is known that Ag uses a lot of water, far more than for a mall or housing. Big use may just mean bigger payoffs.
4. Consideration that water dedicated, in advance, towards our goal of sustainable, diversified agriculture should be part of the EIS. What will the be overall and long-term benefits to the environment (including jobs, tax revenue, energy efficiency, water and resource management, health and well-being of the beneficiaries of these practices)?

Respectfully Submitted  
Kathy Pang

KSP 2 of 2

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Keʻānae, Honomanū  
and Huelo License Areas

Dear Ms. Pang:

Thank you for participating in the scoping process for the subject Environmental Impact Statement pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Keʻānae, Honomanū, and Huelo License Areas and for your written comments dated February 23, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawaiʻi Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Keʻānae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
3. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

quantities from the CWRM D&O were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area.

4. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action. Various technical studies will be appended the Draft EIS and provide detailed examinations, including an Agricultural and Related Economic Impacts Report (See Appendix I), an Economic and Fiscal Impact Analysis Report (See Appendix H), Social Impact Assessment (See Appendix G), and an Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Steam Habitat Evaluation Procedure (HSHEP) Model (See Appendix A).
5. The Draft EIS will assess the long-term productivity of the Proposed Action in Chapter 7.

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

**Environmental Impact Statement Preparation Notice**  
**Proposed Water Lease for the Nāhiku, Keʻānae, Honomanū, and Huelo License Areas**  
**Scoping Meeting Comments of**

Mr. Kawika Stoner  
February 23, 2017  
Haʻikū Park and Community Center  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. STONER: Hi, how's it going? My name is Kawika Stoner. I am from Lower Nahiku. And I know you guys only want to hear about the EIS and what it should address. But, you know, first off, I think there's kind of an agenda behind the EIS and just the way you guys got it, step one, step two, step three.

And maybe next time you guys should hold the meeting or you should maybe hold another meeting out in Hana side, because most of the people -- if you look on the list of places, Haiku is not on that list, and most of the people affected by these decisions actually live out there. Some of them is Kupuna. They can't just go and drive this long road. Some people have babies, kids, they can't just drive this long road, like I said. They gotta work, all this kind of stuff.

But also I see that you guys -- I see that you guys are on top -- if I can go to the slide show real fast, I see you guys mentioned -- there's some things you guys mentioned in here. Where is it? Okay. Right here. "General description on the proposed action," you guys put "economic, social, cultural and environmental" characteristics on there. But what you guys gotta understand is economic -- if we're talking about Hawaiian and Hawaiian culture, you put "cultural" on there. Hawaiians, economics is cultural. If you think about it, the mauka to makai, that's from the mountains to the ocean, that's just the way things go.

But you guys', EIS, it's based off of -- you guys said that it has to meet the laws, right, of the State; it has to meet certain requirements of the law. But that's the law of the state, but there's also the law of nature, which doesn't really get mentioned. Even though you guys mentioned cultural and environmental, it's a contradiction, because economic is what? Money, right? But in the ancient days, the Hawaiians, they never used money. So if you think about that for a second, the Hawaiians used to trade. The people who lived by the ocean, makai, they would trade food with those who live in the mountain, according to what they have. Like if you're by the ocean, you have fish; people by the mountain, they have other things that isn't right next to the ocean. So they would trade, and they would -- that's how -- that's our economics, as Hawaiians. So you can take that "economic" out of there because that's a contradiction, because cultural -- how you guys gonna talk about cultural when economics and all that is in there?

And then how the EIS is supposedly -- this is just a prep, right, like a preparation for you guys' main decision. This is just like -- this isn't for us to testify, but where do we testify? Where do we testify?

Scoping Meeting Comments of Mr. Kawika Stoner  
Page 2  
February 23, 2017

MR. MATSUKAWA: The decision is by the -- for the permit, there will be proceedings, I imagine. So again, I'm not the attorney, I don't know the exact process, but I would think there should be.

MR. STONE: Well, if it was me -- I'm not trying to -- but if I was the one running this meeting, you know, I would definitely know everything that's going on, especially what's going on in the future. Okay. Where's the other page, though?

MR. MATSUKAWA: We should clarify that. We are doing the EIS. You know, I'm still -- in order to do the EIS, I have to learn things. I don't know all of the legal -- this thing has had a long history. I got into this not that long.

MR. STONE: I'm not saying you personally.

MR. MATSUKAWA: I don't know everything. That's why I don't answer some of the questions. I don't know.

MR. STONE: Okay. You know, I'm not -- you know, it's not a personal thing

MODERATOR SENELLY: Can I say one thing?

MR. STONE: It's not a personal thing or anything like that.

MODERATOR SENELLY: By the time the EIS is pau, we will know. Okay? But coming out here, part of it is when you, people like you --

MR. STONE: Yeah, you guys are hearing our testimony.

MODERATOR SENELLY: Yeah.

MR. STONE: You guys are hearing us speak.

MODERATOR SENELLY: What you guys are saying. And so that helps --

MR. STONE: That helps you make the decision.

MODERATOR SENELLY: Right. That helps us put what's going to be in it.

MR. STONE: I understand your process.

MODERATOR SENELLY: So that by the time we're pau, we're gonna get.

10238-02  
September 23, 2019

MR. STONE: Okay. I understand you guys' process and stuff like that, but like I said, you guys might need to remake a whole new PowerPoint, just by -- whoever made it, that's cool. But just think about where you're at, Hawaii. Who are the people? who's native to this place? Hawaiians. So when you talk about the actions of anything, you guys should base it off of that first. And also when you talk about culture, people get religions and this and that. Hawaiians' religion is our culture. So if I was to bring up another religion, people's ears would perk up. But they don't see Hawaiian as a religion, but Hawaiian is a religion. It's not a religion, but it is because you know what I mean.

MODERATOR SENNELLY: Kawika, we're going to move on, okay? You know, I have two more people from East Maui.

MR. STONE: I'm going to wrap it up with what you guys should address in the EIS.

MODERATOR SENNELLY: Okay.

MR. STONE: You guys should address the area, think about the areas that you're talking about, think about the people, and maybe you should -- oh, yeah, address the gatherers and the providers, which are the same thing. Okay. So if I can't go out to the other side to get food or anything like that -- some people go to the store, that's how they get their food. Some people rely on nature, things around them to get their food and to provide for their family. So you guys should address, mainly on the gatherers and the culture -- you guys put the word in there, "cultural." And "environmental." That's the two big words right there. Social and all that can go right now. And cultural and environmental, that should be you guys' main basis, but, you know, it's -- this is words and these are documents and stuff like that.

But when it comes down to it, it's not words and documents and signatures that will determine how the river is going to flow, because that's nature. So when it comes to nature -- oh, yeah. When you talk about meeting the laws of the State, just think about meeting the laws of nature before anything.

Mr. Kawika Stoner

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Stoner:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and your oral comments at the February 23, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. Cultural Surveys Hawai'i, Inc. prepared a Literature Review and Field Inspection report of the License Area (Appendix E) as well as a Cultural Impact Assessment (Appendix F) in support of the Draft EIS. These studies are discussed in the Draft EIS in Section 4.5 Historical and Archaeological Resources and Section 4.6 Cultural Resources.
3. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the

September 23, 2019

- EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.1.2).
4. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I)

Your oral comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Attention: Mr. Earl Matsukawa

SUBJECT: EISP: PROPOSED LEASE (WATER LEASE) FOR THE NAHIKU,  
KE'ANAE, HONOLULU, AND HUELO LICENSE AREAS -  
SCOPING MEETING, FEBRUARY 22-23, 2017

Aloha, I am a resident of Nāhāhā, Maui & was born & raised here. I want to express that I don't support A&B renewing their lease for East Maui because they haven't been good stewards to this precious public resource. They have neglected to fix damaged ditches resulting in a lot of wasted water. In the EIS I would like to see alternative options that could reduce harm to the ecosystem & environment. Some alternatives would be: leave 60% of the water in the stream, that way the aquatic life can begin to replenish and heal itself including our reefs & inshore fish. Letting the water flow make it to Nāhāhā would be healthy for our streams, oceans, and kalo farmers. I would like to see water access be given to kalo farmers and other small farmers so we can start to feed our island again. I would like the EIS to include the impact of diverting water from East Maui Stream on native plants, ecosystems, and the impact diverting the stream has on aiding the growth of invasive species including the mosquito breeding grounds. If the lease is renewed I would like to see a much shorter lease term such as 5 years. This would be much easier for the public to see. If you are not interested in the water (include additional sheets as necessary)

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Konaneakamahina de la Nux:

Thank you for participating in the scoping process for the subject Environmental Impact Statement pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 8, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action, including discussion of alternative lease terms, duration, and volume.
3. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the Draft EIS (See Appendix A and Appendix C).
4. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams

designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I)

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

Honolulu, HI 96826

Subject: Stream restoration at Honopou, Maui.

Dear Mr. Matsukawa;

I read with interest the document prepared to discuss the EMI, Inc. bid to renew the lease on the East Maui Watershed.

As a resident of Honopou for more than four decades I was drawn to the issues that surround me and may affect me as a land owner.

On page 1-12, Table 1-2 License Area, the Honopou Stream is cited as "planned for full restoration".

On page 3-19, Item 3-12 Secondary and Cumulative Impacts, "none are reported".

If the Honopou Stream were to receive "full and permanent restoration" we can expect to live with stream flows that were typical of over 125 years ago! In the intervening century, with stream flows reduced by EMI exports of water, local families have improved and built on their land in areas that may soon be inundated. Access into Honopou Valley requires passing over an old iron bridge, located on State Land, that will surely fail if stream flows return to their pre-1900 levels. The iron portions of the bridge are reasonably sound. At risk are the head walls which are a combination of dry stacked rock with some mortar and concrete. Seasonally heavy rainfalls cause violent swirling of stream water as it forced to turn and narrow it's path as it flows under the bridge. Frequently stream water floods to a level that it flows over the bridge!

There will be un-intended consequences of restoring Honopou Stream to full flow. The Honopou Bridge and the few downstream properties with improvements near the stream bed need to be surveyed and accounted for. I for one feel that there will be "Secondary and Cumulative Impacts".

On page 6-2, Other: Consulted with..... Your list of consulted parties must include the Honopou Road Association. We are a non-profit 501-3C, organized to maintain the road, which is held privately by prescriptive easement. We have the access interests of our landowners, tenants, guests and service providers to worry about. The loss of the bridge or the flooding of homes and properties could easily displace upwards of 100 people. The president of the Honopou Road Association, Ms. Lynn Scott, can be reached at 808 280-2359.

002438

Page 2,

If someone from your staff would like a guided tour of the impacted area I would be willing offer my time to conduct the tour. Your staff can park at my home and we can take my 4wd truck into the valley. We can examine all of the critical impact points between the Hana Highway and where the Honopou Stream enters the ocean. Sending someone familiar with civil engineering issues would be wise since getting a grip on the bridge soundness should be a very high priority.

We will attend the community meeting this afternoon at the Haiku Community Center. Besides this mailing I will hand carry a copy for your staff.

Sincerely,

  
Lafayette Young

Addendum to the above letter, 24 February 2017.

There will be unintended consequences when and if EMI is allowed to restore certain streams to their full potential. The EIS must address these unintended consequences. A minimum condition that must be imposed on EMI and addressed in the EIS would be EMI's accepting and assuming and indemnifying the risks to down stream property owners from stream inundation and any damage or loss of access to their land and homes. Restoring certain stream flows to 120 year old levels will, in certain low lying areas, re-define the stream bed. Added to this new paradigm will be the impact of storms and freshets on improvements in the low lying areas of the affected valleys. Certain non-governmental civil works likes bridges and their approaches may also be at risk too. EMI should not be allowed to walk away from these potential problems without indemnifying the affected land owners and users from loss and enjoyment of their properties.

9 March 2017

Mr. Earl Matsukawa  
Wilson Okimoto Co.

RECEIVED  
MAR 13 2017  
WILSON OKIMOTO CORPORATION

Subject: Stream restoration at Honopou, Maui. EIS

Dear Mr. Matsukawa;

The Hana Hwy. in its present alignment at Honopou was constructed in the early 1940's.

The Federal Aid Project map is FAP 32AC1.

The highway essentially dams Honopou valley with the exception of the natural flow of the Honopou Stream.

There is a single concrete conduit built-in to the Highway base to accommodate stream flow and freshet volumes. I would imagine that the design engineers used stream flow data provided by EMI. Co.

The basic assumptions may be flawed since EMI's data would not have accounted for all the water that they were with drawing upstream. If the Honopou Stream is restored to it's full natural flow rates the conduit may be overwhelmed during peak flows. We have seen this occur multiple time when limbs and trees flow downstream and partially block the conduit. Several upstream properties are at risk!

I believe that the EIS should address this issue.

Once the water flows under the Highway there are still the un-intended consequences to the bridge and downstream properties. These too should be accounted for.

Sincerely,

  
Lafayette Young

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū  
and Huelo License Areas

Dear Mr. Young:

Thank you for participating in the scoping process for the subject Environmental Impact Statement pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas and for your written comments dated February 23 and March 9, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. The Draft EIS assesses flood hazard impacts associated with the Proposed Action in Section 4.3.3 of the Draft EIS.

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process

Sincerely,

  
Earl Matsukawa, AICP

Scoping Meeting Comments of

Mr. Lani Young

February 23, 2017

Ha'ikū Park and Community Center

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. YOUNG: Well, this one, it comes from knowledge. (Hawaiian.) As we help others, we will find help for ourselves. Hawaiians lived in two distinctive areas of the islands: Those who lived near the shoreline, those who lived in the uplands. Goods traded with one another, those goods only available in their own area, this system created a mutually beneficial relationship that supported sustenance, living.

This one comes from the heart. Like the veins that flow your blood through the human body and feeds the limbs is the water that flows through the valleys and feeds life among us. You stop the blood flow, the arm, the leg, the brain goes dead. You stop the streams from their natural flow, life around us suffers. The only native (Hawaiian) will diminish. The only true native opai will be sacrificed. For what? The river mouths, or (Hawaiian), as it is called, is a place of birth. Like the wound, you stop the flow to the wound, you stop the beginning of life for many, many species, species that bigger species depend on for survival. Species like us. But who cares about all this when you can have money in the bank? Is this right? Is this pono?

I oppose redirecting 150 million gallons of water per day from East Maui. By the mile marker 10, Waikane Bay once had a water fountain that was an underground spring. You and the other money-hungry corporations took that for your profit. Everybody who drives on that, everybody that lives on the island and the visitors use that water to sustain their life. The County and State government, they all fall in the same corporation. So the reason why they wanted to destroy it is because the road needed to be more wide, and also for their profit. Give back what the corporations stole from the community. So I say no to the 30-year lease. We don't need development and added progress, nor diverting or transporting of our water. It's not the government's water. It's ours.

Aloha. Thank you.

September 23, 2019

Mr. Lany Young  
Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Young:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and your oral comments at the February 23, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. Section 1.3.4 of the Draft EIS discusses the Commission on Water Resources Management's (CWRM) Interim Instream Flow Standard (IIFS) Decision and Order (D&O) and the authority of the BLNR to issue a Water Lease for non-instream uses pursuant to Hawai'i Revised Statutes (HRS) § 171-58, that is subject to the IIFS set by CWRM.
3. For the purposes of this EIS, diversion quantities from the CWRM D&O were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area.
4. Cultural Surveys Hawai'i, Inc. prepared a Literature Review and Field Inspection report of the License Area (Appendix E) as well as a Cultural Impact Assessment (Appendix F) in support of the Draft EIS. These studies are discussed in the Draft EIS in Section 4.5 Historical and Archaeological Resources and Section 4.6 Cultural Resources.

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

5. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).
6. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action and alternatives on indigenous freshwater species, and terrestrial flora and fauna, respectively. The Draft EIS discusses the impacts of the Proposed Action to freshwater species in Section 4.2.1 and impacts to terrestrial flora and fauna in Sections 4.4.1 and 4.4.2. Both reports are appended to the Draft EIS (See Appendix A and Appendix C).

Your oral comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

**Scoping Meeting Comments of**

Mr. Larry Koss

February 22, 2017

Maui Electric Company Community Meeting Room

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. KOSS: Thank you for doing this and for the manner which you're doing it. It's very supportive. My name is Larry Koss. I live in Wailuku. I'm a member of the Maui Farmers Union -- the Hawaii Farmers Union, although I'm not a big farmer. I'm a backyard bachelor farmer. My -- I don't have all the details, the specifics that some of the people here have, but I would like to draw a distinction between a couple of things that I think would be helpful in the process. One is a distinction between systematic remediation and shifting of context.

FACILITATOR SENELLY: Say that again.

MR. KOSS: Systematic remediation, which we're doing here --

FACILITATOR SENELLY: Right.

MR. KOSS: -- dealing with water. Right? And addressing the underlying context that's driving this in the first place.

FACILITATOR SENELLY: Okay.

MR. KOSS: Because we could be -- we could be addressing this issue now in February 2017, if we don't deal with the underlying context, we could be addressing it again and again and again on the diversions. Right? The other is the notion of sustainability. And when that concept first came out, I was on Orcas Island in '96 and I published a journal, a 60-page journal that we delivered to the entire San Juan Islands of 14,000 people and it draws a distinction between -- I don't use the word sustainability anymore.

Most people don't know what it means, it's been manipulated and abused, and truth is: Who gets to be sustainable? Is it the top 1 percent of 1 percent? And do sustain all the people that are -- all the people that are homeless or without food, does that number sustain itself and keep on going? So the term that I use is whole community well-being.

FACILITATOR SENELLY: Whole?

MR. KOSS: Whole community well-being.

FACILITATOR SENELLY: Thank you.

Scoping Meeting Comments of Mr. Larry Koss

Page 2

February 22, 2017

MR. KOSS: There's no wiggle room with that. Either everybody is cared for and it's all in the funnel, or it's not. So I have -- there's a couple of things that come to mind for me. Number one, I think water and electricity ought to be public trust, period, that handles a lot of issues. I think that's a good thing.

And the other is -- this may sound really outrageous, but I -- and I might get choked up doing it. But I have an invitation for A&B that I would like to have it step up to or be compelled to, to step up to, and that is given its history and given what it's done, it's time to clean up its karma and I would like to see that 36,000 acres dedicated to public trust for the local farming, organic farming, and for affordable housing. And that may sound too wild and crazy, but I just need to think that we do one more -- you know, a whole continuing series of these kinds of things across a number of issues 'cause we're not dealing with the underlying context that drives it, so --

FACILITATOR SENELLY: What do you want to see in the EIS?

MR. KOSS: Pardon?

FACILITATOR SENELLY: What do you want to see addressed in the EIS of all the things you said?

MR. KOSS: Well, I don't know if -- any way that that could fit in there, you know.

FACILITATOR SENELLY: Okay. I appreciate --

MR. KOSS: I just throw it out as a possibility.

FACILITATOR SENELLY: Thank you.

MR. KOSS: Thank you very much.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Koss:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and your oral comments at the February 22, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).

3. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D);

Address: [REDACTED]  
Email: [REDACTED]

Dear Wilson Okamoto Corporation - Attention: Mr. Earl Matsukawa

A&B or any related corporation or other business entities (such as a co-op or a business in partnership)

SHOULD NOT BE ALLOWED TO LEASE WATER

Until the residents of the license areas

(Nahiku, Ke'anae, Honomanu and Huelo)

Are fully provided for in their needs for water.

These residents are not being sufficiently provided for NOW

and they have not been for years that A&B or other related business entities linked to A&B (which have been used to make short term leases adding up to a long term lease) have been obtaining the water using subversive business tactics.

YOU MUST STOP ALL LEASING ACTIVITIES

until the people of this land are compensated and provided for in reimbursement for the incredible detriment that A&B and related entities have caused upon this land for decades.

Furthermore, this EISPN should not be conducted by a corporation that is HIRED BY the corporation that wishes to obtain a lease!!! This is a conflict of interest and it can impact the EISPN process in favor of the corporation. This is not the right way to do this.

THIS IS NOT PONO.

THIS IS NOT PONO.

THIS IS NOT PONO.

AND NOW IT WILL STOP .

THIS IS THE TIME FOR ALL THIS KIND OF ACTIVITY TO STOP .

The Wilson Okamoto Corporation  
MUST SUPPORT THE COMMUNITY OF MAUI  
by stopping the leasing process NOW.

And I will tell you on behalf of all the ancestors that have lived upon this land, that if Wilson Okamoto Corporation does NOT do what is PONO, Wilson Okamoto Corporation will fail to exist upon these islands. It is the only way for spiritual justice now.

SO DO WHAT IS PONO.

DO WHAT IS PONO.

DO WHAT IS PONO.

And all of us will be safe and provided for.

All of us will have the prosperity that we seek.

But if you do not serve what is truly PONO.

The islands will have their way with you.

Because now is the time for justice.

NOW IS THE TIME FOR HO'OPONOPONO

The only thing for you to do for your client in this EISPN process is to bring A&B to HO'OPONOPONO with the communities

Nahiku, Ke'anae, Honomanu and Huelo

THAT IS YOUR TASK

mark my words

if you do not do THIS

you and your corporation will fail

your client's corporation will fail

MAUI and all the islands of HAWAII! NEI

will have their justice.

Mahalo for your attention.  
Lehua

Simon  
[REDACTED]

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū,  
and Huelo License Areas

Dear Ms. Simon:

Thank you for participating in the scoping process for the subject Environmental Impact Statement pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 10, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued *"right, privilege, and authority to enter and go upon"* the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the *"purpose of developing, diverting, transporting, and using government owned waters"* through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended to the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSheP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I)

3. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the DLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.

4. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Vice President, Director of Planning

cc: Suzanne Case, Chair, Department of Land and Natural Resources  
A&B / EMI, Applicant

#### Leslie Kuloloio Scoping Meeting Comments

February 23, 2017

MR. KULOLOIO: Aloha everybody. We are all related to all the people all the way around the island, and the same water, I'm here to talk about what the EIS should not do. The last time I see an EIS performed was by the United States Navy for the island of Kahoolawe. And when we went inside there, we thought that we had to bring all the people together to bring back what you call Kana'loa, is a sacred place, a sacred place. And when the EIS was done, they did not clean up the island of the ordinance. This will not clean up, the (Hawaiian) of Alexander & Baldwin, who is the Roman empire.

The Roman empire is the guys that came here from the pilgrims, called Americans, came over here and put their feet down at the Sea of Kulolua, which now they are calling Honolulu Harbor. And guess what? We just had a settlement agreement of Alexander & Baldwin who owned and make the molasses, who gave it to Matson, who is on EIS, who is a subsidiary of water, like EMI, done by consulting companies.

I'm going to respect Okamoto. And guess what, they killed all the fishes in Honolulu Harbor by the sugar cane plantation molasses. Let's think big now, let's think big. So did Lahaina Pioneer Inn. So did Wailuku Sugar. All of the missionary families from Connecticut, and Pennsylvania, Rhode Island. You know what Aloha Tower is? Just like the Statute of Liberty: Come, come, come immigrants, come into my land on the Sea of Kulolua, now called Honolulu Harbor. Who fought the war for the Pauwela Lighthouse? Yours truly. And guess what the first used to run. The EMI, EMI is part of the Spreckelsville Beach that haole bought from Waiehu, the grant, the grant, 3343, all the way to Pauwela. That's the railroad. That's the fight land.

So let's talk bigger than that. It is the ending of A & B, on the plantation product of many generations. But A & B pau. Go home, go home. You folks had the aina for a long time. Give back the water. And water should be free for the homeless family in Kahului. The Hawaiians who are homeless, they're all on Alahama Street, down the harbor, they're all over the place. We're all related. We're all ohana, we all ohana. You know what freedom of religion is? Then you'd better know so that your culture impact will affect what you should address.

Why don't you have -- you folks have a cultural person tonight, sir? Well, you'd better. You said you don't have the experience. If you don't have the experience, you don't deserve to be here tonight...

MR. KULOLOIO: And so all I'm saying is that native rights gotta be protected. We had enough. We had enough. Our ditches -- I want the Kuiaha ditch to run again. That was the first one they took over to run the cannery, the pineapple industries. Are you listening? And Pauela ditch came all the way down to the lighthouse. Look at the maps. Show me the maps. You know what you don't have? You don't have the map of Maui. All our families are affected. No treat us kanakas (Hawaiian). We food of abundance, we navigators. Make sure you're listening. Put it down in your notes. We navigators, we farmers, we gatherers, like all you said, and we protectors, and we are really just people. That observatory on top there need to come down, in Halekala. You know why? It get Inouye's name on top there.

Mr. Leslie Kuloloio

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Kuloloio:

Thank you for participating in the scoping process for the subject Environmental Impact Statement pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your oral comments at the February 23, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
3. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action, on indigenous freshwater species, and terrestrial flora and fauna, respectively. The Draft EIS discusses the impacts of the Proposed Action to freshwater species in Section 4.2.1 and impacts to terrestrial flora and fauna in Sections 4.4.1 and 4.4.2. Both reports are appended to the Draft EIS (See Appendix A and Appendix C).

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

You folks listening? And one mayor said the rocks are not sacred. What? Then the water is not sacred. In the name of the Father, Son, I baptize you in the name of the Father, Son and Holy Ghost. So let's do a cultural impact. Let's talk Hawaiian religion. Have Hawaiian religion here, it's about time. And the fishermen are Hawaiian religion, yeah. They treated us like the teepees. They took away all our abundant places. Everybody say: (Hawaiian.) That's the gill of the fish that travel. We are related to the fishes of the world. The fish go around the world. We don't stay in swimming pools, we don't stay in those aquariums. Our family go around the world. Okay?

And guess what, say: (Hawaiian.) We seek knowledge from the gills of the fish. That's who we are, (Hawaiian). And the ocean is part of us. We navigators, we gatherers, we know what is the reefs. We don't need one haole tell us guys how to protect the reef. But you know what, thank you folks for listening. I'm kind of P-ed off. You know why? This process is one insult.

Thanks. Mahalo.

10238-02  
Letter to Mr. Leslie Kuloio  
Page 2  
September 23, 2019

4. Cultural Surveys Hawai'i and Earthplan prepared reports in support of the Draft EIS assessing the cultural and social impacts of the Proposed Action, respectively (See Appendix F and Appendix G). The impacts of the Proposed Action to traditional cultural resources and practices is discussed in Section 4.6 of the Draft EIS while impacts to the social environment can be found in Section 4.7.

Your oral comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

**Subject:** RE: EISPN: Proposed Lease (Water Lease) for the Nahiku, Ke'anae, Honomanu, and Huelo License Areas

Aloha kakou,

My name is Lipoa Kahaleluahi. I write this brief email as a child of the next generation remembering the ongoing fight for water to be restored in the above mentioned streams since I was a little girl. My family hails from the other side of the Hana district, from Koali, Kipahulu and Kaupo, yet as a moku, a district, we know when and how to unite as one community. And at this time, this issue of a proposed water lease of 30 years is such a time.

My concern is that an EIS on these streams within our ahupua'a will not be thorough nor substantial enough to paint a clear picture of the needs within our community. Don't misunderstand my message; I am not entirely against the sharing of our resources to the communities that are now developed and live off of this water (Upcountry in particular). I write to express that these waters must be better accounted for, so that our communities on the east end suffer no longer. I am with the kalo farmers, as I am a part of restoration projects in Wailua Nui. It's not just about streams being restored; it's about being able to monitor and "control" the auwai or water systems into lo'i so that kalo survives. It cannot just come and go as someone else pleases. Please, come to Wailua Nui, to Ke'anae and see. Please, go up mauka to the forests and take data of how our native forests, birds, and natural habitats are affected by

002448

the inconsistent flow of our streams. Past experiences and years of inconsistency and organizations left unaccountable for their actions is unacceptable.

We are island communities. We cannot survive without water. Yet, our water is a finite source and it is being treated - A&B and EMI are treating it - like it is an infinite source. This EIS cannot be a mere checking of the boxes. It must contain stories, quotes, cultural, ecological, and scientific data from Ke'anae to Kaupo. It must state how concerned our island community is of the development of the once sugarcane lands. Add these concerns to the EIS and you will find that a 30 year lease is absurd. It will not lend the amount of accountability necessary to ensure the security and sustainability of our 'aina.

With sincerity and deeply rooted concern,  
Lipoa

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Kahaleuahi:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 10, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action, including discussion of alternative lease terms.
3. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the Draft EIS (See Appendix A and Appendix C).
4. For the purposes of this Draft EIS, the stream list used was from the Commission on Water Resource Management's (CWRM) June 20th, 2018 Interim Instream Flow Standards (IIFS) 1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

Findings of Fact, Conclusions of Law, & Decision and Order (D&O) which is discussed in Section 1.3.4. The D&O IFS were also used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area.

5. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended to the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I)

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

  
Earl Matsukawa, AICP

**SUBJECT: EISPN: PROPOSED LEASE (WATER LEASE) FOR THE NĀHIKU, KE'ANAE, HONOMANŪ, AND HUELO LICENSE AREAS – SCOPING MEETING, FEBRUARY 22-23, 2017**

Aloha KāKōni,  
I am submitting written testimony concerning the diversion of water. I have several questions regarding the proposed water lease: what are the intentions for the diversion? We have all seen how big diversified ag on O'ahu has lasted after the release of Waiahole River... it quickly turned into housing developments. How long are we planning to lease for diversified ag? I believe that the attempt to secure the lease, it is not for diversified ag, but a ploy to secure the water for development. Until last year's legislative session the permit that EMI was operating under was 'ILLEGAL'. It is time for the govt to stop catering to corporate interests and fulfill the needs of the community you are mandated to serve.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū  
and Huelo License Areas

Dear Ms. Pauahi:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas and for your written comments dated February 23, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawaiʻi Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued *"right, privilege, and authority to enter and go upon"* the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas for the *"purpose of developing, diverting, transporting, and using government owned waters"* through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process  
Sincerely,

**Environmental Impact Statement Preparation Notice**  
**Proposed Water Lease for the Nāhiku, Keʻānae, Honomanū, and Huelo License Areas**  
**Scoping Meeting Comments of**

Mr. Lloyd Fischel  
February 22, 2017

Maui Electric Company Community Meeting Room  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. FISCHEL: And I think it should address what is happening to the water today? From the time that the farming of sugar cane stopped to today, what is happening to that water? Is it being dumped? In a world where water – people die for water, is it being dumped? We should know.

MR. FISCHEL: Thank you, ma'am. Just a few, a few things I'd like to see the EIS address. Of course, I'm a farmer and we all have to recognize that most of the food that we eat, maybe even more than 90 percent is imported. And being where we are, given the problems in the world today, given what could happen to the cost of petroleum, of oil, of energy, this decision must reflect an understanding of the importance of small farms growing food for Maui.

It's insanity to think of giving all that water to one company, one company that has not been a good partner with small farmers over the years, one company that has spewed lots and lots of chemicals into the air, into the ground. One company that's in partnership with who? Monsanto. It's insanity to think that they would get this water and that we would call it the people's water, that we would think that the water then would be used for growing crops. As Mr. Balthazar said, it's so important that this water must be used for agriculture and not developments.

And the second thing I want to mention is in the -- in the documents that have been put forward up to this point, as in the screen presentation earlier, the word "state owned land" was used. The EIS should address: What does that mean, state owned land? Who is the state? And where are the Hawaiian rights within that concept of state owned land? And any of you working on this EIS that can talk about having Hawaiian friends and loving Hawaiian people and loving Hawaiian culture that don't then address this issue, it's really a (inaudible).

And the second thing is in this -- words that have been used here in these papers and in the screen as well, "government owned waters." It said government owned waters. I'd like the EIS to define what does that mean, government owned waters? Thank you.

FACILITATOR SENELLY: Okay. You had two things. The first one was -- the first one was make sure that the -- you want the EIS to address having the water go to small farmers or, you know, like diversified and small farmers and not just industrial type; right? And the second thing is define what state owned lands means and also define what state owned water means. Okay.

MR. FISCHEL: I'd like to add one more thing to that, please.

FACILITATOR SENELLY: Okay.

10238-02  
September 23, 2019

Mr. Lloyd Fischel

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Kē'anae, Honomanū  
and Huelo License Areas

Dear Mr. Fischel:

Thank you for participating in the scoping process for the subject Environmental Impact Statement pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Kē'anae, Honomanū, and Huelo License Areas and your oral comments at the February 22, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued *"right, privilege, and authority to enter and go upon"* the Nāhiku, Kē'anae, Honomanū, and Huelo License Areas for the *"purpose of developing, diverting, transporting, and using government owned waters"* through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
3. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action. Various technical studies will be appended the Draft EIS and provide detailed examinations, including an Agricultural and Related Economic Impacts Report (See Appendix I), an Economic and Fiscal Impact Analysis Report (See Appendix H), and an Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Steam Habitat Evaluation Procedure (HSHEP) Model (See Appendix A).

Your oral comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

**Proposed Water Lease for the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas**

**Scoping Meeting Comments of**

Mr. Lorrin Pang

February 23, 2017

Ha'ikū Park and Community Center

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

**MODERATOR SENNELLY:** All right. First speaker, Dr. Pang.

**DR. PANG:** Thank you. There's nothing special about speaking first. I was -- there was a glitch. I wasn't speaking last night. Not their fault, not my fault. So I'm really last from last night, I'm not first from tonight.

**MODERATOR SENNELLY:** It actually was my fault.

**DR. PANG:** Okay. That's all right. The EIS, you know, I think they should address some real, how shall we say, radical things, things that we think are impossible, for a couple reasons that really are good and they're a little bit far out. But we shouldn't just look at what we do now and say, well, you know, these ten guys, let's give more to him, he'll be happier, he'll be mad, and throw a bone to the fighting dogs. You shouldn't look at your status quo and argue about the money and the water right now. And to put this in perspective, you know, I have to give you my background. I'm not from this side. I'm not fighting for East water. I fought for the Na Wai 'Eha water. So this -- I have no conflict of interest in here. So sometimes people will say, well, then shut up, you're not a stakeholder. Sometimes the best people are those who have no conflict of interest and are interested enough to give a fair assessment.

You don't think that's true? I have reports from Big Island people, Kauai people, who look at this and say, we have no stake in this game, so let us give an opinion. My background opinion is, already last night, they said "share the water," "share the water," "share the water." You want to know what share is? Really? To the Big Island people, the Kauai people and the Na Wai 'Eha impacted people, they said here's what share is, somebody took our water for 120 years, they took 95 percent at some cheap cost. So that's your time. Now it's time to share. The East Maui guys get it for 120 years, and then when it's 120 versus 120, let's --

(Audience clapping.)

**DR. PANG:** Stop that clapping, because people who don't get clapped for feel bad. So now when it's 120 versus 120, then we talk about sharing. But with that in the background, let me give something kind of practical, some far-out things which you think are impossible because we haven't done them for so long, it must be impossible. First of all, can we feed ourselves? And I don't mean ag, ag, I mean food, food, food. Now if you want to say Maui, Maui. If you want to say can we kind of feed Oahu, ship some stuff over there, fine. But Hawaii has to be food self-sufficient. Okay? That means chemical --

(Incomprehensible due to clapping.)

**DR. PANG:** The minute we say, oh, look, I made so much, I shipped it out, and I'm on the world market; and then the world market gets undercut, then all the macadamia nuts get buried, et cetera, Et cetera. So feed ourselves first. Now I know you're going to go through the details, and, oh, that's so expensive. Well, food security, security costs a little more money. Okay. So that's what I wanted to address. Next thing -- there's only three things. Next thing I want to say is when we feed ourselves, can we do it based on smaller farmers, startup, diversified, no spray. And if you say, well, gee, I just saw the report where that's just unfeasible, well, I'm sorry, I've prepared a report, I'll give it to you 2011, I visited the Big Island guys called Wild Tomatoes. That was just a practice to show that homestead land guys had a terrific operation. It was published in the on-flight magazine. And that was just a test to show they could do tomatoes. They're going to convert to taro, high-fiber carbs. The guy's wife is off insulin because she helps a little bit in the garden. They can do it. The financial is sound. They're hiring their own family to distribute on Oahu. It can be done. The technical part is in the report, four pages. So look at that. Don't just say, well, we're going to feed ourselves and the big corporate guys say we can't do it, so we can't do it.

There are alternatives. We used to. We used to do this. And the final thing is -- I really have to say this. And here's something, you say, well, that's impossible, we never did that before, here's one we never did before. But outside of Hawaii, water, fresh water, potable water, water for ag, is like gold, it's like liquid gold. And people look at Hawaii, and they say, oh, look, every time it rains here, the muddy water chokes the reef, the muddy water chokes the reef. Why don't you guys catch it. So the Na Wai 'Eha -- that's the other side, right. The Na Wai 'Eha report said you catch the 17 rainiest day of Wai 'Eha -- I'm not talking about just the water on the east side -- you put it in a big -- I call it the dam, and my wife said call it the reservoirs. You put it in three big reservoirs. You don't let the water dirty the reef. I checked this with the Sierra Club. Maybe we should go natural. The water is so muddy and dirty, it's hurting the reef. Hold it, and that's more than enough water for everything you can imagine for the near future. But you have the 800-pound gorilla. You got that much water? There's no fighting? I'm going to move in. I cannot solve the 800-pound gorilla, but this has some beautiful concepts to it. Locate the reservoirs where you want, near the ocean, so when they break, like, you know, the California dams, you don't flood out people. Put it low, pump up the water with solar energy. No battery. Just pump it. When the sun shines, you pump it up. And you control the damage to our reef. And what happens to this? How we talking about the east side water? Technically, now it comes into play. Now to share your chance to get it, I feel bad about diverting clear water. Clear water should flow in the streams when it's driest and needed. But if your side here generates dirty water -- say Haiku is developing, every time they flood, wow, look at that, look at what we did to the reef in Haiku. Divert that. Maintain enough EMI system so that all the dirty waters about to choke the reefs, whatever, goes into these holding reservoirs, settle it, pump the water high to the Kula when you need it.

Now all this stuff is like, yeah, great pie in the sky. But, you know, that's how things get started. I'm not asking for tomorrow, where the Kula guys say, well, no water. Give them the status quo. But I want to

see some progress moving to some things that are worthwhile. For 35 years, all we do is fighting and, oh, that's your stream, that's your stream, and we never move at all. I can guarantee you to fund the reservoirs, I think there's \$350 million per billion-gallon reservoir. You can float a bond. If you can float a bond for the Super Whale that's never going to be self-supporting, you can surely float a bond out of state, because fresh water that's potable, that's usable for ag, is like gold. But I only like this if your EIS says long-range plan. I want to see every three years, we're moving forward, moving forward a little bit more towards the idea that we choose. Otherwise, it's so frustrating. And I'm a patient guy, but I like to see a little progress, sincere progress.

Thank you.

MODERATOR SENELLY: Thank you, Dr. Pang.

Trip Report to WOWFarms, Waimea Hawaii  
2 November 2011  
From: Lorrin Pang representing Maui CPPW

I visited Trisha and Mike Hodson of WOWfarms ([WWW.wowfarms.com](http://WWW.wowfarms.com)) in Waimea (Big Island of Hawaii) the afternoon of 28 Oct 2011. The article in the Oct/Nov of Hanahou Hawaiian Airlines magazine talks about their achievement but barely touches the surface of the obstacles they had to overcome to get there. The purpose of my visit was to determine their "business model" used to become successful. We queried key Maui CPPW members for questions which are answered in the text below. If I forgot to address any please call me and we can discuss.

This farm project is really the brain-child of Mike, who has no formal education beyond high school where his main focus was on football. He had no mentors who taught him farming at anytime in his life. In fact he had obstacles discouraging his proposed organic techniques. After high school he worked about 25 years with the police as a crime/narcotics investigator. Throughout this time he coached high school football. Five years ago near the end of his career he felt "burned out" and began gardening to relieve his stress. He built one 20' X 100' "greenhouse" on their 5 acre homestead property and began to raise tomatoes. The UH College of Tropical Agriculture and Human Resources (CTAHR) held a \$250,000/year contract with Hawaiian Homestead Lands to get homesteaders to farm (only 3 of the estimated few hundred in Waimea actually farm) and they told him he absolutely needed pesticides (spraying) to grow tomatoes. Mike was also helping his relatives spray pesticides on their tomato farm and despite full protective suiting had his feet burned repeatedly from the pesticides. From his football and anti-narcotics experience Mike likes a challenge and decided to show CTAHR and his relatives that he could grow organic tomatoes in the soils (as opposed to aquaponics) of Waimea.

Only five years ago Mike and Trisha started with one greenhouse to grow tomatoes in the soil, studied and solved problems on his own using information on the internet, "trial and error", and a good deal of observation. My note; this is an important, often forgotten discipline called empirical science which depends upon statistics (biostatistics for biological systems)

as the academic cornerstone. He had no grant money but started on a relatively small scale. He initially sold tomatoes at farmer's markets and as word spread demand picked up to restaurants. He reinvested to two to four then to eight green houses each time doubling his production. During this phase he had disastrous crop losses three times. Often Trisha wanted to quit – but each time Mike tinkered with the conditions and moved forward with modifications which proved successful. He now has about 36 green houses and will go to 54 soon. He now ships overnight by barge to Honolulu and produces about 8000 pounds of tomatoes per week. He has a several family members working with him, including those in Honolulu to handle receiving and distribution of his tomatoes. He says the current demand is more than double of what he could produce. He is “organic” but avoids “certification” since that process would take 1% of the profits. While retailers need certification for “organic labeling”, Mike says that restaurants don't. But chefs do come on his property to see what he does. Mike sees a more long term negative effect of pesticides – they poison the soil (good as well as bad microbes) and his children will forever be obliged/addicted to use them. He currently sprays when absolutely necessary with three things: Sulfur compound, Neem, and something else I cannot recall. As far as soil preparation – his soil was never used by plantations but pasture for grazing cattle. He does occasionally bring in composted material from Waikoloa, which has a large composting program as part of their green waste disposal. In addition he tries to compost at his farm, but decomposition is slow due to the cool climate. He feels that composting is not really essential for nutrients but it does help “loosen” the soil.

An example of Mike's meticulous “scientific” approach is the decision to go to wider greenhouses (20 to 30 feet width) to increase the air circulation, which in turn affects temperatures and reduces crowding of the plants. This modification is a large undertaking and will be done first to a few green houses with the effects carefully studied. All his practices, from the tilling of the soil, composting, density of covering screens, etc have been learned from trial and error (empirically). Ideas might have originated from the internet but whether they have value under his unique conditions can only be learned from observation.

He grows other crops, English cucumbers, Kalo and native sweet potatoes (uala) on a smaller scale for use by his extended family. Between two covered green houses we came upon a massive jumbled, impenetrable patch of very healthy dry land Kalo with stalks several feet tall! Mike said this

was all kinds of white (kea) varieties and was to be harvested soon by his extended family. I have never seen anything like this. Next he took us to an unprotected, seemingly abandoned plot (maybe 400 square feet) where he had planted and was harvesting 24 native varieties of uala (excluding the Okinawan type). Mike's goal with this plot was to share with potential farmers that even with minimal care uala could grow (that there is no excuse not to farm something). Mike's next five year plan is to grow so much Kalo on homestead land that it becomes as cheap as rice. We talked about the health value of high fibre carbohydrates (kalo, banana, ulu and uala) versus low(er) fibre carbs (white rice, bread, potatoes, etc). Mike says that commercial kalo farmers may worry about the low price if homesteaders undercut the market – but in the name of culture and health he would press on.

Trisha's diabetes responds well to high fibre carbs and sugar reductions (technically carbs are sugars linked together and released slower than the big blast of a sugar sweetened beverage) – and she has gone on a diet with Uala as her carbohydrate. She and Mike say that pounded uala was a Hawaiian staple equal or more common than kalo/poi. Hence the uala patch described above. He said that Kalo master Jerry Konanui will soon be studying/working on the native uala varieties to grow and promote their plantings.

CTAHR is trying to return to Mike's place now to study how/why he was so successful. Mike questions the status of their contract with Hawaiian Homestead lands given the low farming rate and their reservations about alternative approaches, till shown to be successful.

In summary, what the Hodsons have done in such a short amount of time is nothing short of miraculous, both scientifically and from a human perseverance point of view. That they had to do this against a backdrop of negative advice from “seniors” is unfortunate. They seem to have the spirit of teenagers but the wisdom of elders. But most inspiring is that their hearts are in the right place and they will be doing the right thing with the best intentions. Under these circumstances we can be honest and straightforward in our communications. We should be honored to work with them and look forward to future collaborations.

September 23, 2019

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū and Huelo License Areas

Dear Mr. Pang:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas, your oral comments at the February 23, 2017 EIS Scoping Meeting, and your written comments dated February 22, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawaiʻi Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.
4. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

10238-02  
Letter to Mr. Lorrin Pang

September 23, 2019

be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your oral and written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

**Scoping Meeting Comments of**

Ms. Lucienne de Naie  
February 23, 2017  
Haʻikū Park and Community Center  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MS. DE NAIE: Mahalo. My name is Lucienne de Naie. I've lived in Huelo for 30 years. Me and my neighbors are the ones that kind of started this process, along with the folks in Nāhiku and Kēānae and Wailuanui, and we've been waiting for more than 20 years for this EIS. So I'm going to speak to what I think should be in the EIS exclusively.

First of all, this is not about taro farmers and rural residents versus upcountry farmers and residents. So the EIS should be very clear that there may be alternate ways for folks upcountry to get the water they need. And we all support the ranchers and farmers having water, the ag parks, the Department of Hawaiian Homelands, and even folks that want to farm in Central Maui. The thing is how. And this EIS needs to look at real alternatives of how. We need to see if there should be crops that would use less water. We need to see if improving our soil would mean that all crops need less water. We need to take a hard look at the stuff that would affect how much water we use.

We need to look not at the status quo, as many people have said, but the existing conditions and impacts, and there are many. And we need to address the impacts of our overgrown streams. We see this in Huelo. Just letting the water out is not going to solve the problem. Someone needs to take care of those streams. The EIS also needs to have better maps. The maps, you know, they don't meet the standards that you're going to need to have information. First of all, there are not 39 streams. The decision and order of the hearings officer has named 43 streams in the lease area. And there are more if you count the tributaries. But these main 43, I suggest you look at his decision and order. It's being used by everybody. There are not five streams being proposed to be restored. There are eight streams, and they are by name. And I'm not going to take time to name them, but if I turn in written stuff, you'll get their names. The EIS needs to look at alternative management plans, like several other people have said, and look at the economic side of it. So what else could be done. Could we have these smaller leased areas? Could we have partnerships in leasing the land? Does it just have to be the one, you know, big banana there, A & B? You really need to take a look at that. The three alternatives are not enough. The EIS needs to look at alternatives for managing the watershed lands.

Let me tell you, boys and girls, we're not going to keep having water unless we take care of the lands. It's like in 30 years, I've seen them go so downhill. They're not going to produce the same amount of water. So we'll be fighting over less and less. We need to grow water and grow our care. And that needs to be examined in the EIS, what the strategies for that would be, how much it would cost, because it's part of awarding any leases, the kuleana part.

The EIS needs to have specific stream-by-stream information, both historic use and proposed diversion. We have no idea what's being taken out of these streams. That needs to be in the EIS. There also needs to be specific info on how much water is derived from the streams that are outside the lease area. And those, you know, we can list those, too, but there's dozens of streams that are not in the lease area that all go to A & B right now and are part of their, you know, potential water source. But we don't know how much that is. So they're asking for 115 billion on top of all those? That's just like double dipping.

I'm getting to the end. The last thing we really need to look at is the upcountry water system the county has. This water system is being very inaccurately portrayed in the draft prep notice.

First of all, there's no map that shows that the County's two-pipe system was supplied. Half the water, they use in the upcountry system. So all the farmers and ranchers that want water, the Hawaiian homeowners, that's the water that's sent to them. The Kula pipeline, the lower one and the upper one, they are not on your maps. They do not go in the lease area. They go to streams, they go to five streams, four streams in East Maui. They do not go in the lease area. So half the County's water is not even affected by this lease. The EIS should make that very clear, and it should analyze what the wells of the County produce. They're barely using their wells. Half a million gallons a day for that Dowling well. I read the well reports. I don't see any information like that, you know, even proposed to be discussed. It should be in there, and I will write some comments.

And I'm going to conclude by saying that if you put all this information together correctly, you will understand what really needs to be taken from East Maui streams, and that number is going to drop a lot lower, and then we can talk about how long the lease should be. But 30 years, I think should – there should be alternatives, like fish and wildlife and others that have suggested. 30 years is not the only number that should be discussed. And public access to the lands needs to be discussed, too, as has been brought up by many others.

Thank you.

Ms. Lucienne de Naie

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū  
and Huelo License Areas

Dear Ms. Naie:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas and your oral comments at the February 23, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS will assess anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.3, a description of the Upcountry Maui Water System. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).

10238-02  
Letter to Ms. Lucienne de Naie  
Page 2  
September 23, 2019

3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action, including a discussion on alternative water sources, lease area, and ownership.
4. For the purposes of this Draft EIS, the stream list used was from the D&O which is discussed in Section 1.3.4.
5. The Draft EIS will include in Chapter 4 an assessment of the impacts of the Proposed Action. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the Draft EIS (See Appendix A and Appendix C).
6. For the purposes of this EIS, diversion quantities from the D&O were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area.
7. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended to the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your oral comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Aloha Mr Matsukawa,

My name is Lurlyn Scott. I am a taro farmer in Honopou, Maui. I am also a plaintiff in the East Maui water case, previous to me in this very long case was my mother Marjorie Wallett. She passed in 2010 waiting for some kind of settlement.

Please excuse my late admittance of my suggestions. I appreciate you coming to Haiku to face the crowd, Mahalo Nui.

I would like to say I agree with comments made by our Attorneys at NHL, Summer Sylva and Camille Kalama: the Dept. of Fish and Wildlife. The impact on taro farmers and their families, stream degradation, silt at our favorite fishing grounds, the loss of o'opu without the natural flow of our streams.

East Maui Irrigation has finally admitted to dumping water that they cannot or have no use for into Honopou Stream. This has caused the inability for our family to utilize for swimming and gathering and to maintain the stream.

My family was not able to farm due to the lack of water especially during the summer months. Taro would rot or not grow sufficiently. This was a financial and nutritional loss to

our families. That to me is an impact.

When hiking in the forest we have noticed o'opu that were stuck in the closed ditches with out much water. We need to take this into account, please.

Because we have been found by the internet we have been bombarded by tourist when the weather is good. They trespass onto private property up stream and leave their rubbish and who knows want else and some end up in our auwai. So the impact of tourism is a concern of mine.

We were once told by the BLNR to work together with East Maui Irrigation and kind of get along, I would like to see more of that happen.

Hogs have been a problem so I guess that's part of invasive species.

Mahalo for your time.

Lurlyn Scott

Honopou

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Lurlyn Scott:

Thank you for participating in the scoping process for the subject Environmental Impact Statement pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 10, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C);, Historical Structure Assessment (See Appendix D);

Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I)

3. Truttia and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the Draft EIS (See Appendix A and Appendix C).
4. The Draft EIS discusses impacts to hydrology associated with the Proposed Action in Section 4.2 of the Draft EIS as well as the reports various technical reports prepared for the Draft EIS, including: Assessment of Streams and the Ocean Water Chemistry (See Appendix A); Terrestrial and Flora and Fauna Report (See Appendix B); and Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Steam Habitat Evaluation Procedure (HSHEP) Model (See Appendix C).
5. Cultural Surveys Hawai'i, Inc. prepared a Cultural Impact Assessment for the Draft EIS which assesses the potential impacts of the Proposed Action on native Hawaiian traditional and customary resources and practices. (See Appendix F). Impacts to agriculture, including traditional agriculture, are discussed in Chapter 4 of the Draft EIS and the Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Subject: Testimony. Water diversion.

Madeline Migenes

Aloha,

I am writing to urge you to respect the water rights of the Hawaiian and original residents of Huelo, Nahiolo, Kipahulu and Hana.

Alexander & Baldwin (A & B) must

Cease to withhold water from these residents and farmers. It has not been pono or right action to favor corporation over the collective for water use and diversion.

I agree with the position of the Sierra Club and Together for Maui.

Mahalo.

Madeline Migenes, MFA

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'e'anae, Honomanū  
and Huelo License Areas

Dear Ms. Migennes:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'e'anae, Honomanū, and Huelo License Areas and for your written comments dated March 13, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued *"right, privilege, and authority to enter and go upon"* the Nāhiku, Ke'e'anae, Honomanū, and Huelo License Areas for the *"purpose of developing, diverting, transporting, and using government owned waters"* through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. Diversion quantities from License Area are based on the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). The D&O used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area.

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Subject: A&B request for Water Lease from East Maui

I am one of 325 people who signed affidavits proving who I am as a native kanaka maoli. Affidavits have been sent to county, state, federal and congress levels of law on my behalf by my grandfather Eric Kanakaole. In the early 90s my grandfather and his cousin Edward Kaiwi exercised their mineral rights and shut down a portion of E.M.I's water contraption. The act made local news on KGM 9. Point is 10,000 acres of East Maui land has been returned to my family and 30 other family heirs of Queen Emma. The water A&B is requesting for continues to be stolen by A&B themselves. Part of the stolen water comes from the 10,000 acres I mentioned before which means EMI and A&B are stealing from my Ohana. To this day we know A&B has only 32% stake of the water. So that means from all the decades A&B have been mishandling their stake there is still 68% unaccounted for. 68% of money over decades of thievery not accounted for which is owed to Kanaka Maoli, more specifically, to the 325 signees on affidavit. So no. No is my response for A&B's request for water from East Maui. And I will continue to defend my land and mineral rights by paper already on record.

**Scoping Meeting Comments of**

Ms. Mahealani Wendt  
February 23, 2017  
Haʻikū Park and Community Center  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

My name is Mahealani Wendt. I'm a board member, I'm also a board member of Na Moku Aupuni 'O Ko'olau Hui. As a founder and executive director of the Native Hawaiian Legal Corporation for 32 years, I filed the petitions to set interim instream flow standards for all the streams within Koolau on behalf of Na Moku. This was in 2001. In a free and Democratic society, we should all have a reasonable expectation that the rule of law will apply and result in a fair and -- fair outcome, a fair and just outcome for all disputants. This is how we have been taught things operate in a free and Democratic society. A & B's last long-term lease expired in 1986.

From 1986 until 2016, when the legislation passed, when the legislation passed the so-called permit, A & B operated outside the law for 31 years. From 1986 until 2016, it had no valid permit. And you know, it's, you know, kind of an outrage. But more than that, I think when things like that happen, as people, as citizens, we lose respect for the law. They lose heart. They feel like they cannot trust. So, you know, as yourself, as consultants and other decision-makers go through this process, please consider this. Because, you know, honestly, I feel like we're being herded into another process with a predetermined outcome. A lot of us feel that way. You know, you tell us that, you know, it's going to open bid and all of that, but there is every appearance, especially given the history, that, you know, A & B is going to get the lease and that the politicians and the people at DLNR Board are inclined to push it through, the same way they did at the legislature. So this is kind of like editorializing a little bit, but I think these are things that we're all feeling.

Nevertheless, operating outside the law, A & B siphoned every drop of water from the East Maui watershed, while A & B, HC&S, upcountry and other county users enjoyed water, our families went without. You have no idea. We never did not want to share. We always wanted to share. Nobody shared with us. And it was really, really, really, really hurtful, because the origin was right there. We could look at the water, we could look up mauka and see the water, but we couldn't use it. It wasn't for us. And so, you know, it was really, really hurtful. And we went through these processes, and we would hear, you know, the other people who have access to this water accuse us of being selfish and not wanting to share. That was not the case. We didn't have anything. So, you know, so this was the situation and, you know, we were for so many generations, the taro from -- you know, generationally, traditional taro farming went out. There was no water to farm taro. The fishing grounds were depleted. The doctor probably knows, Dr. Lorrin Pang probably knows that in our area, the empty streambeds were nesting places for mosquitoes. It was a very unhealthy situation that we lived with every day.

Several speakers from East Maui did know that the EMI ratcheting up is a diversion. So that you took everything in 1990, just happened to coincide with a water conference that was held at Kēānae around the same time. And it seemed like on EMI's part, it was maybe perhaps a preemptive move or something to send a signal to the people over there don't try anything. You know, the water conference was attended by a lot of attorneys from both sides. The attorneys who were sympathetic to the East Maui farmers were saying you have rights, you really do have rights. They don't have a right to come in here and take everything. And these are what your rights are. And I think it came to a shock and surprise to some of the EMI operatives on the ground who were accustomed to behaving in the old way, you know, where, you know, like an Imperial, somebody from outside that comes in and tells you: This is how it's going to come down, and you have nothing to say about it. This is how they treated the people, very disrespectful, very condescending.

So the EMI process should actually have started a long time ago. A lawsuit was filed. And in 2005, EMI and A & B were ordered to do an EIS, and they did not. They fiddle-farted around, you know. And actually, in the interim 30 years since they -- since the other long-term lease expired, they have what amount to a de-facto long-term lease, because it's been 30 years, and they have had continuing access to the water. That's exactly what happened. So there is this -- I mean, I know you're only interested in knowing what's supposed to go into the EIS, but this is a really important historical framework for people to understand. So I actually do have some comments on the Environmental Impact Statement, but I just have another point about that, that all of this would not have been possible but for the collusion of DLNR.

The DLNR attorneys with the A & B attorneys were working together and came up with these wonderful legal strategies to issue these so-called temporary interim leases, I mean temporary permits, which did not exist, which were false, and which were finally declared to be illegal. So given that framework, it's really hard to trust that this process is going to go, you know, in any other way but in A & B's direction. But here are some comments for the EIS.

The degraded watershed, which has resulted from decades of A & B's unlawful occupation, should not be the standard. You know, that point was made last night, that they have, you know, all of these many, many, many decades to go out there and wreck the watershed. And that is not the starting point or, you know, the standard toward which we should aspire in terms of the EIS. Never again must aina be transformed into killed areas, disturbed so severely that the people are deprived of their constitutional rights and human rights to live the subsistence traditions of their kupuna, including growing taro, fishing and gathering from the streams and shoreline areas nourished by fresh water. These also include rights of access to these areas.

We have had to humble ourselves and beg and go through a monthly permitting process just to be able to go up mauka and clean the streams so that the water can flow. Streams must flow continuously and uninterrupted from the mountain to the ocean shores so that aquatic animals can live. Gauges to collect

accurate water, transfer and collect, collection data are critical. Regulatory oversight and enforcement are also critical. Without enforcement, EMI has run roughshod over the people, you know. The public can say whatever they want, but EMI really does whatever they want. You know, they think whatever they want, we go up there, we say, hey, you know, we're supposed to be getting water, but you've completely closed, you know, closed your gate and nothing is coming to us. And they say, oh, well, you know, take it up with our attorney. And then their attorney calls our attorney, and their attorney says, oh, well, my client is in full compliance. And that's the kind of BS our people have been going through for decades. I have one last point. DLNR should seriously consider alternatives to awarding A & B a 30-year lease. I'm totally opposed to A & B receiving the 30-year lease.

Mahealani Wendt o Ko'olau Hui

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease for the Nāhiku, Ke'ānae, Honomanū,  
and Huelo License Areas

Dear Ms. Wendt:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas and your oral comments at the February 23, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. Section 1.4 of the Draft EIS explains that in 2016, the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area.

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

4. Truttia and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action, on indigenous freshwater species, and terrestrial flora and fauna, respectively. The DEIS discusses the impacts of the Proposed Action to freshwater species in Section 4.2.1 and impacts to terrestrial flora and fauna in Sections 4.4.1 and 4.4.2. Both reports are appended to the Draft EIS (See Appendix A and Appendix C).
5. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended to the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).
6. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action, including a discussion of alternative lease duration.

Your oral comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

**Scoping Meeting Comments of**

Mr. Edward Wendt

February 23, 2017

Ha'ikū Park and Community Center

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. WENDT: Aloha.

MODERATOR SENELLY: Aloha.

MR. WENDT: My name is Ed Wendt. I am president of Na Moku. Our community has been involved with this water contested case for many years. In these years, DLNR and (inaudible) have never displayed their leadership in enforcing the laws, protecting our native rights and the public trust doctrine, which are our constitutional rights. Who will enforce these laws? Each stream and river that is diverted has a major impact on our environment and our constitutional rights, when we have never had accurate measurements of the volume of water that is being transferred out of the watershed. We need gauges in the ditch systems and regular intervals to determine how much water is actually being diverted. We are also concerned about invasive species, such as Miconia, Gardenia, and African tulips, which are overtaking the watershed and claiming our native plants. From Maikiko to Honopou, which are outside the permitting areas, streams and rivers are diverted by East Maui Irrigation for free. The State has allowed them to take this water also. This should be accounted for. It is in the public trusts interests.

Well water. A & B has 15 wells on its property. The amount of water available to A & B from these wells needs to be accountable. Gray water. We need to know if gray water from the treatment plant can be used for Alexander & Baldwin Irrigation needs. USGS studies were done on the streams and rivers, it took three years to do this, specifically for East Maui watershed. Their recommendations should be considered. Water needs to flow uninterrupted into the ocean. It is critical for our health, a healthy environment. Based on USGS studies, we have noticed since the recent release of water that our native species, such as the Koloa bird, Hawaiian stilt and species of the dragonfly, found only in East Maui and Halawa Valley, are returning. OHA should have a say in the wording of the 30-year lease. Honomanu, Keanae, Nāhiku are on so-called ceded lands. We'd also like to know how much water Hawaiian Homes is entitled to.

My last comment for the people of upcountry, Kula Farms and Alexander & Baldwin, you have enjoyed the privilege of receiving water from these four areas. As Father Tomoso stated, water is for life and water is for everybody. And we agree. While you all were enjoying this privilege, we in the four areas went dry. Dewatered completely. This does not match (Hawaiian). This is called sacrifice and culture genocide.

Mahalo.

*Ha'ikū, Hawai'i 96708*

March 10, 2017

Earm Matsukawa, Project Manager  
Wilson Okamoto Corporation  
1907 South Beretania Street, Suite 400  
Honolulu, Hawai'i 96826

**SUBJECT:** Early Consultation for the Preparation of an Environmental Impact Statement  
Preparation Notice; Proposed Lease for Nāhiku, Ke'ānae, Honomanū, and  
Huelo License Areas, East, Central and Upcountry Maui, Hawai'i

Dear Mr. Matsukawa:

Thank you for this opportunity to comment. Na Moku Aupuni o Ko'olau Hui ("Na Moku") is a 501(c)(3) non-profit organization whose members include lineal descendants of the original settlers of the adjacent ahupua'a of Wailuanui and Ke'ānae, Ko'olau Moku, current tenants and their spouses.

Na Moku was organized for the following purposes:

- A. to promote the general welfare of the tenants and descendants residing in the Ahupua'a of Keanae-Wailuanui and elsewhere in social, spiritual, cultural, educational and economic affairs;
- B. to preserve and protect, and enhance the quality of the existing life of the people within the Keanae-Wailuanui Ahupua'a;
- C. to provide and improve communication and mutual understanding among the tenants and descendants of Keanae-Wailuanui Ahupua'a themselves and with other community associations concerning their mutual welfare;
- D. to provide a formal voice and organization through which the residents of the community can participate fully and more meaningfully in the determination and development of policies and decisions affecting their destiny.

Accordingly, Na Moku respectfully submits the following comments.

**Conflict of interest.** We respectfully question the appropriateness of Alexander & Baldwin (A&B) preparing this EIS, rather than the state Board of Land & Natural Resources, which shall award the lease, inasmuch as A&B has always had exclusive control of the proposed subject

license area, there has never been another lessee/licensee for over a century, and this arrangement not only gives a strong appearance of a conflict of interest, but also suggests the successful awardee is a foregone conclusion notwithstanding a public bidding process.

**Environmental harms, 1986-2016.** Because of A&B's monopoly, its exclusive use and control of public trust resources for over a century, the EIS should include an assessment, at the very least, of environmental damage which has occurred during the 30-year period since its long-term 25-year license expired in 1986 up to the legislature's enactment of House Bill 2501, the temporary holdover permit legislation which legalized a theretofore illegal practice; i.e., issuance of "temporary" short-term revocable permits. The EIS should include an assessment of damage and steps A&B/EMI will take to repair that damage. There was no interruption of A&B/EMI's massive diversions during the 30-year period 1986-2016, when A&B/EMI held no long-term lease/license. The state DLNR allowed A&B/EMI to continue its up to 450 mgd per day diversions without any accountability for the environmental, social, economic, health, etc. consequences caused by its actions and in contravention of existing environmental laws which were circumvented but which should have applied. Some of the environmental impacts include 100% kill of all aquatic life within completely dewatered streams below A&B/EMI diversions; devastating economic, social and cultural impacts Native Hawaiian taro farmers, gatherers, fishermen and cultural practitioner communities that had historically relied on these streams; proliferation of invasive species and the choking off of natural waterways within the 33,000 license/lease area, causing catastrophic flood events, among other impacts;

The EIS should also include:

- Full disclosure of every single diversion along the East Maui Irrigation system;
- Full disclosure of how much water it diverts from every stream;
- Full disclosure of all maintenance and access roads for the diversion system, including identification of all access points at public roads and highways;
- Maps identifying the entirety of every single stream and tributary that would be affected by this lease;
- Alternative proposed sources of water, including ones that involve no diversions from the East Maui proposed license areas;
- Full disclosure of the amount of water proposed to be taken from each stream daily (average, minimum and maximum);
- Full disclosure of the amount of water proposed to be taken from each license area daily (average, minimum and maximum);
- Impacts of diverting water from every East Maui Stream within the proposed license areas on traditional and customary Hawaiian practices (including kalo farming, gathering of native stream flora and fauna for food, and recreation);
- Impacts of diverting water from East Maui Streams on aquatic life;
- Impacts of diverting water from East Maui Streams on estuaries, including aquatic plants and animals, spawning grounds for fisheries;
- Impacts of diverting water from East Maui Streams on native plant and animal species;

- Impacts of diverting water from East Maui Streams on invasive species, including the creation of mosquito breeding grounds, proliferation of invasive plants within dewatered streambeds and surrounding areas;
- Impacts of diverting water from East Maui Streams on outdoor recreational activities, the maintenance of ecosystems and aesthetic values such as waterfalls and scenic waterways.

**Customary and Traditional Practitioner Input:** Na Moku respectfully requests that every effort be made to contact and gather information from our traditional practitioner family members, attestations as to likely impacts of the proposed lease upon their taro farming, gathering of traditional foods from the streams, fishing practices which depend on healthy estuaries, and related cultural traditional and customary practices.

Thank you for this opportunity to comment.

Sincerely,  

Edward Wendt  
President

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease for the Nāhiku, Ke'anae, Honomanū,  
and Huelo License Areas

Dear Mr. Wendt:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas, your oral comments at the February 23, 2017 EIS Scoping Meeting, and your letter dated March 10, 2017. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued *"right, privilege, and authority to enter and go upon"* the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the *"purpose of developing, diverting, transporting, and using government owned waters"* through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. For the purposes of this EIS, diversion quantities from the D&O were used to estimate the total amount of water to be diverted by the EMI Aqueduct System from the License Area, a description of the EMI Aqueduct System and its operation is included within the DEIS (refer to Sections 2.2.1 and 2.1.2).

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

10238-02  
Letter to Mr. Edward Wendt  
Page 2

4. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action, on indigenous freshwater species, and terrestrial flora and fauna, respectively. The DEIS discusses the impacts of the Proposed Action to freshwater species in Section 4.2.1 and impacts to terrestrial flora and fauna in Sections 4.4.1 and 4.4.2. Both reports are appended to the Draft EIS (See Appendix A and Appendix C).
5. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended to the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).
6. Cultural Surveys Hawai'i, Inc. prepared a Cultural Impact Assessment for the Draft EIS which assesses the potential impacts of the Proposed Action on native Hawaiian traditional and customary resources and practices. (See Appendix F).
7. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action, including a discussion of alternative water sources.
8. Section 2.1.1 discusses the Department of Hawaiian Home Lands' water reservation.

Your oral and written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

**Scoping Meeting Comments of**

Mr. Maluhia Stoner  
February 23, 2017  
Haʻikū Park and Community Center  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. STONER: My name is Maluhia Stoner, and I've lived in Lower Nahiku all of my life. Now before I begin, I would like to inform you that this is specifically for the East Maui Irrigation Company and A & B and does not portray my opinion of the council before me. This is a Hawaiian proverb handed down for generations: When the earth is ill, what is its medicine? Rain. Because when the heavens cry, the earth is healed.

By this saying, it is easy to understand the Hawaiian connection of water and health. The rain that falls from the heavens causes the waters to flow; and they, in turn, gives life to the earth. The earth in turn sustains the people. The waters of life which flow from the mountains and which will sustain our generation and future generations are of great importance to me and people who love and care for the land and culture. The initial development of the ditch system was authorized as a part of the Hawaiian Kingdom's program to promote prosperity for all the people of the Kingdom. Of importance to the native Hawaiian families of the land, each of the water licenses issued under the Kingdom included clauses which protected the water rights of native tenants of the respective lands through which the ditch system was developed.

The original license stated: The continuance of the right here before granted is upon this condition, that existing rights of present tenants of said lands or occupiers along said streams shall in no wise be affected injuriously by reason of anything herein before granted or covenanted.

Now before I continue, I would like to point out that during the time of February 2015, during the drought on the other side of the island, you cut off not only the rivers but the aqueduct that supplies Lower Nahiku with water. May I inform you that we had children under the age of three at the time, and this threatened not only our health but the health of the land, the native plants and animals, and the native fish, both fresh water and salt water. It took having the County workers of our community go all the way to the water blockage and turn it back on. This is a clear violation of the license issued under the Kingdom of Hawaii and is ineligible to pass in court. But regardless of the laws and regulations stated above, you don't only break the laws of the state but the laws that nature itself has set for every man, woman and child who sets foot on these sacred lands; and you are in no position to determine what is and isn't sacred. You're making us pay for our water that you take too much of; and you don't even have the courtesy of doing it within the legal boundaries of the laws you agreed upon years ago.

You take 450 million gallons of water a day and waste a huge percentage on releasing it on the ground. When will you realize there's no more cane fields to feed and that the industrial progression which you

support is the very reason why you feel you must take that much water. You are the reason that there's no water in certain sections of the island. Nature has taken the waters of life from you because you had the nerve to abuse such a sacred element. You have already deprived our culture of the once abundant source of life, and you dare take more. I testify that the East Maui Irrigation Company and A & B is guilty for the theft of our culture, the endangerment of native and indigenous species, the choice to ignore the claims of the Hawaiian people, the people of this island, and the destruction of the home in which we will always and have always resided in.

Thank you very much.

be very grateful.

~~~~~

Now before I begin I would like to inform you that this is specifically for the East Maui Irrigation co. and does not portray my opinion of the council before me. Here is a hawaiian proverb handed down through generations-When the earth is 'Ili, what is it's medicine... rain, because when the heavens cry, the earth is healed. By this saying, it is easy to understand the Hawaiian connection of water and health — The rain that falls from the heavens causes the waters to flow, and they in turn, give life to the earth; the earth in turn, sustains the people. the waters of life which flow from the mountains, and which will sustain our generation and future generations, are of great importance to me and those who love and care for the land and culture. While testimonies in some public hearings have expressed the sentiment that 'the waters were taken without permission', the initial development of the ditch system was authorized as a part of the Hawaiian Kingdom's program to promote prosperity for all the people of the Kingdom. Of importance to the native Hawaiian families of the land, each of the Water Licenses issued under the Kingdom included clauses which protected the water rights of native tenants of the respective lands through which the ditch system was developed. The original license stated: and the continuance of the right herebefore granted is upon this condition...that existing rights or present tenants of said lands or occupiers along said streams shall in no wise be lessened or affected injuriously by reason of anything hereinbefore granted or covenanted... now before I continue I would like to point out that during the time of feb 2015, during a drought on the other side of the island, you cut off, not only the rivers, but the aqueduct that supplies Lower Nahiku with water. May I inform you that we had children under the age of three at the time, and that this threatened not only our health, but the health of the land, the native plants and animals, and the native fish, both freshwater and saltwater, it took having the county workers of our community to go all the way to the water blockage and turn it back on. this is a clear violation of the license issued under the kingdom of hawaii, and is eligible to pass in court, but I am nowhere near done. According to chapter 174, part 9 of the state water code, native hawaiian water rights state that Traditional and customary rights of ahupua'a tenants who are descendants of native Hawaiians who inhabited the Hawaiian Islands prior to 1778 shall not be abridged or denied by this chapter. Such traditional and customary rights shall include, but not be limited to, the cultivation or propagation of taro on one's own kuleana and the gathering of hihwai, opae, o'opu, limu, thatch, ti leaf, aho cord, and medicinal plants for subsistence, cultural, and religious purposes. The appurtenant water rights of kuleana and taro lands, along with those traditional and customary rights assured in this section, shall not be diminished or extinguished by a failure to apply for or to receive a permit under this chapter, which states that if we must travel upstream in search of hihwai, opae, o'opu, or other

native plants or animals that cannot be acquired in our vicinity due to the East Maui Irrigation co. taking too much water, then we have all the right to pass on to your lands to do so with or without your permission. According to chapter 174, section 71, part 6, instream uses of water, The commission shall establish and administer a statewide instream use protection program. In carrying out this part, the commission shall cooperate with the United States government or any of its agencies, other state agencies, and the county governments and any of their agencies. In the performance of its duties the commission shall:

- (A) Establish instream flow standards on a stream-by-stream basis whenever necessary to protect the public interest in waters of the State;
- (B) In acting upon the establishment of instream flow standards, the commission shall set forth in writing its conclusion that the public interest does or does not require, as is appropriate, an instream flow standard to be set for the stream, the reasons therefor, and the findings supporting the reasons;
- (C) Each instream flow standard shall describe the flows necessary to protect the public interest in the particular stream. Flows shall be expressed in terms of variable flows of water necessary to protect adequately fishery, wildlife, recreational, aesthetic, scenic, or other beneficial instream uses in the stream in light of existing and potential water developments including the economic impact of restriction of such use;
- (E) After giving notice of its intention to set an instream flow standard, the commission or other agencies in participation with the commission shall investigate the stream. During the process of this investigation, the commission shall consult with and consider the recommendations of the department of health, the aquatic biologist of the department of land and natural resources, the natural area reserves system commission, the University of Hawaii cooperative fishery unit, the United States Fish and Wildlife Service, the mayor of the county in which the stream is located, and other agencies having interest in or information on the stream, and may consult with and consider the recommendations of persons having interest in or information on the stream. In formulating the proposed standard, the commission shall weigh the importance of the present or potential instream values with the importance of the present or potential uses of water from the stream for non instream purposes, including the economic impact of restriction of such uses. In order to avoid or minimize the impact on existing uses of preserving, enhancing, or restoring instream values, the commission shall consider physical solutions, including water exchanges, modifications of project operations, changes in points of diversion, changes in time and rate of diversion, uses of water from alternative sources, or any other solution;

Maluhia Stoner

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Maluhia Stoner:

Thank you for participating in the scoping process for the subject Environmental Impact Statement pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated February 23, 2017, and oral comments at the February 23, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The forthcoming Draft EIS will assess anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).

3. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

(F) Before adoption of an instream flow standard or modification of an established instream flow standard, the commission shall give notice and hold a hearing on its proposed standard or modification.

According to my knowledge, the public is not satisfied with the current instream flow standards and/or the stream-by-stream basis in which the commission has set, and the public is not only entitled to a new instream flow standard, but the ability to build the foundation for a new one. Now regardless of the laws and regulations stated above, you don't only break the laws of the state, but the laws that nature itself has set for every man, woman and child who sets foot in these sacred lands, and you are in no position to determine what is and isn't sacred. You're making us pay for our water that you take too much of and you don't even have the courtesy to do it within the legal boundaries of the laws that you agreed upon years ago. You take 450 million gallons of water a day, and waste a huge percentage on releasing it on the ground, which if I must remind you, kills many native reefs, and destroys the homes of native fish. When will you realize there is no more cane fields to feed, and that the industrial progression which you support, is the very reason why you must take that much water. You are the reason that there is no water on certain sections of the island, nature has taken the waters of life from you because you had the nerve to abuse such a sacred element. You have already deprived our culture of the once abundant source of life, and you dare take more? I testify that the East Maui Irrigation co. and A&B are guilty for the theft of our culture, the endangerment of indigenous species, the choice to ignore the claims of the Hawaiian people, the people of this land, and the destruction of the home in which we will always and have always resided in, thank you very much.

Mr. Mapu Kekahuna

February 23, 2017

Ha'ikū Park and Community Center

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. KEKAHUNA: Mahalo to all our kupuna for being here. Thank you for being here. Today I'm very disappointed as -- I'm going to (inaudible) the vice chair tonight of the community association. And I'm insulted that A & B, your organization, to bypass Hana and involve East Maui, all of East Maui, from Kaupo, Kipahulu, Hana, Nāhiku, and everybody else. This is big geographics, yeah. And not have them participate in this EIS, whatever you want to call this. Okay? It's not pono. You know, people, our people here in Maui are seeing the desecration. We see it every day. Gradually we have to keep our Maui, all of us in this room. People, wake up. Because Maui will be gone. It will protect this island.

Seven generations, my family -- I'm a seventh-generation from Nāhiku. You know, like you guys said, that EIS, you guys, I was reading through it, that you could probably compromise our domestic drinking water if A & B don't get this 30-year lease. That's what I was reading. Is that a threat?

You know, for me, as a kanaka, I feel like, wow, if A & B don't get what they want, we don't get drinking water, my kupuna have to go to the river and haul water from the river, as they did when they were growing up? Is that what the answer is? I think the County of Maui has a fiduciary responsibility. We have three County water tanks in Makapipi. Like the lawyer said before, carve it out, take Hanawi, Kapaula, Makapipi, carve it out, take out that diversion, let the County of Maui take care of their aqueduct that feeds the county to provide us domestic water, which is our right too, yeah. And then take us out of your palapala. Take the word "Nāhiku" out. Take it out, take it out. We don't want it.

You know, our people of Maui can see this, right, plain as day. I drive to Paia every day, Monday through Friday, going back to Nāhiku. The traffic is nasty. Selling land quietly, use the term "quietly," they sell it to a businessman in California to supplement that development. People, we're not stupid. We're not stupid. The sooner A & B realizes all the illegal actions -- and I thank the na moku aupuni people that started this battle. It shouldn't be a battle. Not for the kanaka, not for the people of Maui, born and raised, bred, to have to sit in a meeting when we have to work, work, to come listen to this nonsense.

It's expensive to live here in Maui, in our homeland, our one hanau. Expensive to live here, but we have to take that -- our passion for our island is important to all of us. Even for you malehinis that moved here to Maui, you guys can see the desecration going on. Keep Maui Maui. Oahu is already messed up. Leave Maui alone. Take Nāhiku out of that equation. That's my recommendation. Cut it out, like the attorney said, cut it out. Take the diversion, feed on the other county tanks, that's it, and let our rivers, rivers flow.

Mr. Mapu Kekahuna

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Kekahuna:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your oral comments at the February 23, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. Section 1.3.4 of the Draft EIS discusses the Commission on Water Resources Management's (CWRM) Interim Instream Flow Standard (IIFS) Decision and Order (D&O) and the authority of the BLNR to issue a Water Lease for non-instream uses pursuant to HRS § 171-58, that is subject to the IIFS set by CWRM.
3. For purposes of this Draft EIS, the list of streams assessed as part of the License Area is taken from the CWRM D&O.
4. Section 2.3.1 of the Draft EIS discusses the Maui Department of Water Supply (MDWS) system, including water sourced from the EMI Aqueduct System. Figure 2-4 depicts the MDWS surface water supply system.

Honolulu, Hawaii 96826

RE: EISPN East Maui Water Lease 2017-02-08-MA-5E Testimony

My name is Mark Kijima. I support EMI's application for a long-term lease to divert and convey water from East Maui to Central and Upcountry Maui.

I live in Kula so I benefit from water being diverted from East Maui to Upcountry Maui.

I work for BEI Hawaii. Our company sold products that supported agricultural and industrial operations at HC&S. In late 2014 we had 10 employees here on Maui before HC&S announced their closing. We will be down to five employees by the end of this year. There is little prospect that things will improve in our base business without seeing agricultural operations resume in Central Maui.

It is in the public's interest that water continues to be diverted from East Maui to the highly productive, though arid agricultural land in Central and Upcountry Maui whether it is used for organic farms, diversified agriculture or energy crops. These lands would be valuable in helping realize Governor Ige's goal of doubling local food production by 2020 that cannot be met without an adequate, reliable supply of fresh water.

EMI has infrastructure in place to efficiently divert and transport the water from East Maui. It would be a tremendous waste of resources to see this valuable infrastructure fall into a state of disrepair because of a lack of use and maintenance. The costs of restoring an abandoned water conveyance system would be cost prohibitive for the state and county.

Thank you for the opportunity to offer this testimony.

Sincerely,

  
Mark H. Kijima

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Kijima:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated February 22, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
3. The social impacts from modification or removal of diversion structures in streams designated for full restoration are discussed in the Social Impact Assessment by Earthplan (See Appendix G). The agricultural and economic impacts are assessed in the Agricultural and Related Economic Impacts Report done by Plascch Econ Pacific, LLC (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

**Subject:** Comments on EISPN Proposed E. Maui Water Leases

Dear Mr. Okamoto:

Mahalo for the opportunity to comment on EISPN for the use of water from four license areas consisting of 33,000 acres of public lands and water in East Maui.

I have been a Haiku resident for over forty years, own 10.5 acres of land through which flows the dewatered Kuiaha stream. My farm operations which are extensive have been directly impacted by diversions.

The comments from Native Hawaii Legal Corporation need to be addressed in the Draft EIS. The information they request should be included.

The Draft EIS needs to consider a wider range of management alternatives. I do not think that EMI has been a good steward of the lands. Because they have been gifted public waters at a bargain rate, EMI has allowed the ditch system to deteriorate with unacceptable losses as high as 30mgd. Nor have they worked to protect the watershed. I don't believe Maui county or the state of Hawaii would do much better, so I favor a trust type of watershed partnership to manage the resource with first priority to be repair of the system along with work to control invasive species that are degrading the watershed.

002478

I look forward to the publication of the EISPN as soon as possible.

Respectfully,

Mark Sheehan

Mr. Mark Sheehan

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Sheehan:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 7, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.
4. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action. Various technical studies will be appended the Draft EIS and provide detailed examinations, including an Agricultural and Related Economic Impacts Report (See Appendix I) and an Assessment of the Environmental Impact of Stream

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

Diversions on 33 East Maui Streams using the Hawaiian Steam Habitat Evaluation Procedure (HSHEP) Model (See Appendix A).

5. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the Draft EIS (See Appendix A and Appendix C).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Vice President, Director of Planning

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MS. MARTIN: Thank you. I appreciate all of the work that is being done on the EIS. I think it's going to be a very interesting document. And some of my comments that I have I think go -- should be directed to the Department of Land and Natural Resources, not to the EIS.

I have -- I've lived on Maui for 50 years and I see that agriculture is changing on Maui. We're not going to have a big mono crop cultivation of sugar that we -- and pineapple that we used to have. And so what I would like added to the EIS is for the EIS to address the condition of the ditches and the amount of water leases that exists today. It may be in there, but in my hurried look at it on the computer, I didn't see anything that reported that, the condition of the ditches and the amount of leakage in the ditches.

Also I would like the EIS to recognize what the priority is for water use. To me, that land that they're drawing water from is watershed and the primary use of the water should first be watershed and stream protection and forest preserve.

And the -- for me, the second priority should be the farmer taro users of the streams and restoring flow of the water in the streams which maintains animal and reef life in the ocean.

And then I think the third user that should have priority should be the county.

And then No. 4, I think the small farmers, both old and new, should get priority because we don't produce enough of our food locally. And when sugar and pineapple were grown, they didn't support our state with enough diversity.

And then No. 5, the last bidder allow -- the last bidders allowed to bid I think should be corporations and I think they should get only short-term leases, not -- not 30-year leases.

And I think bidders who are working to make Hawaii more self-sustaining in food and energy should be given priority over private profit. And so thank you for this chance to speak and I hope we're going to make a good decision on this.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Martin:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for your oral comments at the February 22, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action, including discussion of alternative lease terms.
4. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the

**Scoping Meeting Comments of**  
Mr. Albert Perez  
February 22, 2017  
Maui Electric Company Community Meeting Room  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

Do you want stop me?

FACILITATOR SENELLY: I'm going to -- you said that you were going to turn something in?

MR. PEREZ: I am.

FACILITATOR SENELLY: Because it's still gonna be on record. Is that okay?

MR. PEREZ: That's fine.

FACILITATOR SENELLY: All right. And here's what I'm saying, here's what I'm saying, we do have limited time and --

MR. PEREZ: I'm almost pau.

FACILITATOR SENELLY: Okay.

MR. PEREZ: I think it would be very important that we get actual stream flow data. We just participated in the --

FACILITATOR SENELLY: No, no. I'm acknowledging that.

MR. PEREZ: Okay. I'm just watching that finger. (Laughter.)

FACILITATOR SENELLY: No, no. Because I -- we've heard that and I'm just acknowledging.

MR. PEREZ: Okay. We don't have stream flow data for each stream that's proposed to be diverted and we should have. We should explore alternatives and shorter lease terms, an alternative of just leasing the ditches and roads instead of the entire 30,000 acres. What about the possibility of state acquisition and repair and maintenance of the diversion system and charging of market rates for water to generate enough money for that repair and maintenance?

And then it can be administered in accordance with the public trust instead of -- I mean, let's face it, the county relying on a private corporation for its Upcountry water system is really, really risky. What if they change their minds, what are we going to do Upcountry?

And then, finally, I'd like to ask about if the EIS could analyze -- and I don't know if this is appropriate or not because A&B is applying for a lease, DLNR is evaluating the impact of that lease to them, but what about the possibility of having other bidders for a lease on these waters?

MR. PEREZ: I have a lot of comments and I'm not going to read them all because I'm going to submit written testimony, but I did want to talk about what I consider to be a major flaw in the initial premise of the EIS preparation notice. So there are many places where it says the proposed action will maintain existing conditions subject to the pending stream flow decision and those significant impacts are anticipated for various topic areas of like geology and things like that. To me, that is a flawed premise, you are -- sorry.

Currently HC&S is using very little water and it may be years before they use much more. In terms of the environmental impacts of the proposed action, it does not matter what their stated future intent is, we have to evaluate from the existing situation, which is that opae and other stream life are currently using habitat that currently exists. The proposed action will reduce or eliminate this habitat and that is an impact that must be analyzed. Kalo farmers currently have water available that will be reduced or eliminated by the proposed action and this is an impact that must be analyzed. So your -- I think if you -- if you go ahead on this basis, that the entire EIS will be flawed.

I also wanted to say that no one is talking about either/or, you know, it's not either Central Maui gets water or East Maui gets water, it could be both. There's plenty of water, but it should be used wisely. I'm hopeful that some of the people here today will share what positive impacts they've already seen from the increased water flow, and we have heard some of that. We need to insist that this EIS has real information about real impacts and not just gloss over what has happened in the past, because we can learn from that and incorporate that into the EIS. And then I'm not going to go into detail about what should be discussed, I'm going to leave that out, but I did want to talk about some alternative actions that could reduce harm to the environment and to cultural users such as: Leaving more water in the streams than A&B has requested, using other water sources like wells or streams that A&B already diverts outside of this lease area. Maybe they have enough already, maybe they don't need this, this lease. Making sure that the water is used for agriculture. A&B does not have clear plans for agriculture. They keep changing it and the land is being sold, so what assurance do we have that leasing this thing for 30 years, that the water is going to be used?

How about growing crops that are appropriate for the environment out there in Central Maui that -- I mean, you don't have to grow mangos in the middle of the arid part of the island. Using less thirsty crops that would use less water. Currently 42 million gallons per day is lost from the ditch system and the reservoirs. How about the alternative of reducing ditch system and reservoir losses? How about allowing more access to public lands so that we can see what's actually going on there?

February 22, 2017

FACILITATOR SENELLY: There -- actually, that is going to be happen.

MR. PEREZ: Okay, Good. And I'll wrap up here. There's also a problem with the analysis in the EIS preparation notice. It says that the -- the no action alternative says that no entity, including A&B, would have the right to use waters derived from state lands if they don't get the lease, but this is not true. Downstream riparian and appurtenant users would have that right. The water's gonna flow and people can use it; so it's incorrect to say that nobody would have the right to use that water. The other thing that I found odd was that the preparation notice raises the possibility that continued maintenance of the ditch system outside of the leased areas might not be economically feasible. I don't understand why that would be true outside, but not inside the leased area.

FACILITATOR SENELLY: Okay. I'm going to -- and we'll make -- we have your oral and you're going to turn in your written and I -- is that okay?

MR. PEREZ: I am actually done.

Attention: Mr. Earl Matsukawa, Project Manager

Re: Environmental Impact Statement Notice: Proposed Lease for the Nāhiku, Ke`ānae,  
Honomanū, and Huelo License Areas of Public Land, Maui, Hawaii

Dear Mr. Matsukawa:

Maui Tomorrow Foundation (MTF) is grateful for this opportunity to provide comments on the Environmental Impact Statement Preparation Notice (EISP/N) for the use of water from four license areas consisting of 33,000 acres of public lands and waters in East Maui. We have been part of a coalition that has long requested environmental review for the removal of such large quantities of water - which is a public trust resource held in trust for all the peoples of Maui - from public lands.

Following, please find our comments on the type of information that must be included in the Draft EIS to comply with the content requirements established by Hawai'i Administrative Rules (HAR) Sections 11-200-16 and 11-200-17. Without this information, the document will not disclose enough information to government agencies, the general public, stakeholders, and decision-makers about the anticipated impacts of the project, alternatives to the proposed action and feasible measures that might be taken to mitigate potential impacts, sufficient to allow informed decision making.

Scope of the Draft EIS:

We do not concur with the EISP/N statement:

*"The Proposed Action is limited to the issuance of the Water Lease for the subject License Area, which would enable A&B to continue operation of the EMI Aqueduct System that has been in operation for over a century. In general, the Proposed Action will maintain existing conditions, subject to the pending IIFS decision and any reservations in favor of DHHL."*

The DEIS document needs to acknowledge that "existing conditions" and operations of the East Maui Irrigation (EMI) system for over a century already have multiple impacts on streams, stream life, aquifers, watershed health, local subsistence agriculture, traditional farming and gathering and economic viability of rural families...these current conditions need to be

discussed, and viable alternatives to the status quo presented, in the alternatives section of the DEIS. The scope of alternatives discussed in the EISPN is too narrow to comply with the standards set out in HAR 11-200.

The EISPN states in many places that the Proposed Action will maintain existing conditions, and that no significant impacts are anticipated. This is a seriously flawed statement that will invalidate the entire EIS if it remains unchanged. Currently, Alexander and Baldwin/East Maui Irrigation/Hawaiian Commercial & Sugar (A&B) is using a lower amount of water than they were prior to the end of sugar operations; it may be years before they use much more. In terms of environmental impacts of the Proposed Action, it does not matter what their stated future intent is. Opaie and other stream life currently have access to habitat that currently exists. The Proposed Action will reduce or eliminate this existing habitat. The impacts of the proposed action that must be analyzed in the current context.

Similarly, kalo farmers currently have water available for kalo that will be reduced or eliminated by the Proposed Action. The reduction in available water, as compared to existing conditions, is an impact that must be analyzed.

Many people at the EISPN hearings on February 22nd and 23rd, 2017 testified regarding positive impacts that they have already seen from increased stream flow resulting from the cessation of sugar operations. The EIS must discuss the following:

1. information about known impacts that occurred in the past, which are likely to occur again if water is diverted as it was in the past
2. present impacts that are continuing (such as watershed degradation as a result of invasive species having gained a foothold as a result of low stream flows)

Maps Need More Clarity:

Fig 1-1 ditch system map does not very clearly delineate the EMI ditch systems. The colors used to indicate abandoned or active ditch sections are not very distinguishable. The dotted lines used to indicate ditch tunnel sections make the relationship of the various ditches hard to determine. Using a contrasting color to mark tunnel sections would make more sense.

Fig 1-3 shows the Alexander and Baldwin (A&B) use area for diverted water but does not indicate:

- the County of Maui Department of Water Supply (MDWS) use area that depends upon the EMI diversions
- the location of the MDWS aqueduct systems (Upper and lower Kula Pipelines) which occur almost entirely outside the lease area and are not dependent upon continued water diversion by EMI.
- the area containing streams outside the lease area that are diverted by EMI and provided to the A&B use area regardless of the outcome of the License agreements

All of these are important parts of the information the Board of Land and Natural Resources (BLNR) needs in order to understand what the EMI system does. If these items are not included on this map, new maps should be created to clearly include this information.

## Section 1.2

The BLNR instructed that the scope of work should distinguish between those matters that can be undertaken prior to the (Commission on Water Resources Management (CWRM) decision on the petitions to amend the Interim Instream Flow Standards (IIFS), and those matters that require the final CWRM IIFS decision. The EIS needs to follow the advice of the U.S. Fish and Wildlife Service (USFWS) and provide analyses based upon different ranges of IIFS restoration, not wait until IIFS is resolved.

## Sec 1.3

The description of the Proposed Action states that the Lease agreement “will also allow the continued provision of water to approximately 30,000 acres of agricultural lands (formerly in sugarcane) in Central Maui owned by A&B (See Figure 1-3).”

The recent maps and charts provided for the East Maui Stream IIFS Contested Case (A&B Exhibit C-156-A) refer to 3,954 acres of that 30,000 acres being used for “unirrigated pasture” and a total of 26,996 acres that will need some form of irrigation from A&B water sources in the EMI system. The DEIS should be consistent with these figures.

Section 1.3 also states: “The Water Lease will not allow the lessee to use more water than the amount that will be available for diversion after CWRM issues a decision on the pending IIFS matters.” The Draft EIS needs to clearly indicate how much diverted surface water will be available to meet A&B’s diversified ag needs from streams outside the lease area that are also heavily diverted by the EMI system. Specific information should be provided about these streams and their output to the EMI system.

There should also be specific delineation of provision for water needs for Department of Hawaiian Home Lands (DHHL) lands, within East Maui and the upcountry MDWS service area, as noted in the DHHL comments.

## Section 1.4

The EISPN states that, “Settlements along Hāna Highway from west to east, toward Hāna, include Huelo and Kailua makai of the Huelo License Area, Ke’ānae and Wailua makai of the Ke’ānae License Area and Nāhiku makai of the Nāhiku License Area.”

This description should add the communities of Honopou, Hanawana and Hoolawa to the Huelo Lease area. These communities have no public water systems, and the DEIS needs to specifically discuss mitigation plans to restore sufficient flows to Puniawa, Hoolawa, Mokupapa, Honokala,

Waipio, East Waipio, Waipio Iki and Hanawana streams to provide domestic water to hundreds of families who live in these communities. Their streams are not part of the 2001 IFS petition for the East Maui Lease areas, yet the continued diverted conditions of their streams impact their daily lives and their rights to have sufficient water for their domestic needs.

#### Section 1.5 Purpose and Need

Section 1.5 states: "The "need" for the Water Lease is due to the lack of existing adequate alternative sources of water and infrastructure to meet these demands."

This section should clearly define the amount of A&B acreage actually needing irrigation and additional EMI sources of stream water outside the lease area, or reclaimed water from the Kahului treatment plant, to provide that irrigation. It should also note that a portion (around half) of the Upcountry MDWS system comes from diversions outside the proposed lease area, or from fresh water wells, and is not dependent on the EMI system. It should also discuss new upcountry wells being planned by the MDWS and DHHL as potential "alternative sources"

#### Section 1.6 Environmental Characteristics

Section 1.6 states: "There are 39 identified streams within the four License Areas (See Figure 1-4), several of which are the subject of the pending IIFS decision before CWRM (See Table 1-2). Some have identified Waikani as a stream, but it is a waterfall on the Wailuanui stream, and not a stream itself."

IIFS hearings Officer, Dr. Lawrence Milke identified 43 streams in the Lease area in his 2016 Findings of Facts/ Conclusions of Law (FOF/COL) and Decision and Order. This information should be reflected in the DEIS.

Fig 1-4 "License streams" is incorrect - a number of stream names are left out.

Table 1-2 is also incorrect. For example: Hanehoi and Puolua and Huelo stream are all separately diverted streams. Honokala stream and Waipio Iki stream are left off. East and west Wailua Iki are separate streams that are each diverted. This Table should list all 43 streams found in Dr. Milke's 2016 Findings of Facts/ Conclusions of Law (FOF/COL) and Decision and Order.

#### Section 1.7 EMI Service Area

Section 1.7 states: "While DWS has worked diligently in recent years to bring additional sources of water online for Upcountry users, the County's dependence on water received through the EMI Aqueduct system cannot be overstated." "Three DWS water treatment facilities rely on water from the EMI Aqueduct System."

The DEIS needs to clarify that two DWS water treatment facilities only rely on the EMI system during the driest portion of the year.

The DEIS needs to clarify that DWS has around 4 mgd in existing well capacity for its upcountry system and usually uses about 25% of that due to expense of pumping the wells. The EMI water, under current conditions, is not the only water available to DWS; it is the cheapest water. That should be made clear. If renewable technologies were available to pump the wells, as A&B has done for many years to operate some of their wells, additional water could possibly be feasible for the upcountry system.

Section 1.7 refers to the current "Memorandum of Understanding" (MOU) executed between the two parties." It should also refer to the section of the MOU where both A&B and DWS agree to work on plans to restore stream flows if agricultural needs change (which they have!!) The DEIS should specify those plans for stream restoration that have been discussed by A&B and DWS.

Section 1.7 states: "The Kamole-Weir Water Treatment Facility relies on water from the Wailoa Ditch, which receives water from diversions of several streams: Honopou, Hanehoi, Puolua, Alo, Waikamoi, Puohokamoa, (West, Middle and East Branches), Ha'ipua'ena, Kōlea (East and Punala'u), Honomanū, Nua'a'lua, Pī'ina'au, Wai'aka, Kapā'ula, Hanawī, and Makapipi (East and West). The average daily production at this facility is 3.6 MGD, but it can process up to 6 MGD at maximum capacity."

This list leaves off the following streams that are diverted by the Wailoa-Ko'olau Ditch: East & West Wailua Iki, and East & West Wailua Nui, Waipio, Hoalua, Ho'olawa, Na'ilili haele, Kailua, Waiohūe, Kopili'ula, Wahinepe'e, Waiokamilo, Puakea, Puakā'a and Palauhulu. The DEIS should have an accurate list.

Section 1.7 states: "The EMI Aqueduct System continues to serve a critical role in providing Upcountry Maui with water, and should the delivery of water from the EMI Aqueduct System to DWS be curtailed, Upcountry Maui and the Nāhiku community would be left without a reliable source of water."

The DEIS should clearly state what level of "curtailed" delivery of water from EMI would begin to effect the DWS Upcountry system, since a very small portion (3 to 10 mgd) of the EMI system capacity goes to DWS, and around half of that amount travels thru their own systems, which are not currently pictured on EISPN maps.

Section 1.7 states: "Agricultural Users: Upcountry Maui was once the center of vegetable production in the State, but over recent decades, many of the large farms changed ownership leaving the KAP as the only large continuous farmland in the region."

Details must be provided to support this claim. According to CWRM reports used in the IIFS proceedings, the upcountry system supplies around 40% of its water to commercial farmers.

Section 1.7 states: “When under sugar cultivation, the full needs of the 30,000 acres of Central Maui fields could not be met by stream waters diverted by the EMI Aqueduct System at all times of the year. Every month, HC&S would be required to utilize its brackish wells to supplement available surface water supplies to meet the demands of its sugar cultivation operations in Central Maui.”

Given this fact, the Alternative’s section of the DEIS needs to discuss crops and growing methodologies that will use significantly less water than the 115 mgd currently discussed in the EISP. The Maui Tomorrow Foundation’s report “Mālama ‘Āina: A Conversation About Maui’s Farming Future” provides information on these proven methods. HC&S historically used their brackish wells for up to 40% of their water needs up to 2002. They are part of a reliable system. A&B also reported being short of water 10 months out of the year, even though they had unrestricted access to all of the water they could divert from East Maui, and 25 mgd from Na Wai Eha and their system of 15 wells.

#### Section 1.8 Project Setting

Section 1.8 states: “Immediately upon acquiring HC&S, the partners started construction on the Lowrie Ditch, which started in the rainforests of Kailua in the Makawao District of Maui. The ditch had two sources, the first was a reservoir at Papaaea that was fed by two five- to six-mile ditches, and the second was Kailua Stream where a diversion intercepted the source of the older Ha ‘ikū Ditch and ran parallel to that ditch.”

This description of the Lowrie ditch diversions is incorrect. Lowrie also intercepts and diverts dozens of other streams along its route. A complete chart of all the ditches and diversion points in the lease area should be provided in the DEIS, as has been requested by Native Hawaiian Legal Corp in their comments.

This section also has no mention of construction of the New Hamakua ditch, Manuel Luis and Center ditches, and no mention of construction of county upper and lower Kula pipelines. These pipelines traverse EMI lands and are serviced by intakes on the upper reaches of around five streams that flow through the East Maui lease area. The intakes, mostly above the East Maui lease area, are maintained by EMI, which charges the county for “water delivery” that arrives at the DWS reservoirs through the Kula pipelines. It is important that the DEIS clearly explains the workings of this system.

#### Section 1.8 states:

“In 1938, the Territory of Hawai‘i and EMI entered into an agreement intended to set the stage for competitive bidding when the existing water licenses expired. The 1938 agreement provides for the joint use of the EMI Aqueduct System. “In the agreement, both parties granted easements to each other for portions of the aqueduct facilities that crossed land owned by each respective party,”

The DEIS should discuss the alternative of the system being managed as a public irrigation district, being managed by a partnership of agencies and stakeholders, and other possible management scenarios. Maui DWS also referred to a need to have the DEIS discuss these options in their comments. EMI/A&B would then be one user of the system. The DEIS should also discuss the option of individual lease areas being awarded to the residents of the area who depend upon the streams.

Section 1.8 states: “Another aspect of the agreement set forth the manner in which the Territory was to charge for water collected. The amount charged was to be in inverse relation to the distance between the source and the delivery point. Thus, the government received less for Nāhiku water, which had to travel the greatest distance to Central Maui fields, than it did for water taken from the Huelo license area, which was closer to the Central Maui fields.”

The Nāhiku lease, according to EMI, delivers much more water than the lease areas further west. The lower flat fee based upon distance does not account for this windfall. The alternatives section should discuss a variety of updated fee schedules and a funding structure that creates enough revenue to actually actively manage the lease lands for watershed productivity.

Section 1.8 states: “Over the course of the 20th Century, A&B retained the rights to the use of water from the License Area by being the successful bidder for water leases, the last of which expired in 1986, issued by the State of Hawai‘i Board of Land and Natural Resources (BLNR).”

The DEIS should clearly explain that no one else bid on the leases and A&B/EMI had a defacto monopoly on their use.

Section 1.8 states: “The industrialization of agriculture served as a catalyst for radical social, cultural, and economic change that the islands experienced over the course of the latter half of the 19th century, and much of the 20th century.”

The DEIS also needs to discuss that this industrialization and dewatering of streams has left lasting and continuing impacts on the watersheds and the communities who dwell there as well as native Hawaiian cultural practices. The EIS should acknowledge those impacts and address the following mitigations:

- 1) restore watershed health and productivity in lease areas
- 2) Restore native stream life and viable stream flows for traditional agriculture
- 3) restore soil health and productivity and reduce water demand in central Maui

Section 1.8 states: “While the sugar industry on Maui has steadily declined and all but disappeared (prompted largely by the decline in relative value of sugar as a commodity and the steady increase in production costs), the aqueduct systems that enabled the mass cultivation of previously arid, non-arable lands remain in place and may continue to service the community in

support of Maui's rich agricultural tradition and history, and may serve as an asset to ensuring the sustainability of Maui's economy moving forward."

The DEIS must discuss the relative benefits of regenerative agricultural methods in future plans for the irrigated former sugar lands. Examples would be: rotational grazing; extensive cover cropping; contour plowing and water collection swales (see MTF "Mālama `Āina report referenced earlier). The DEIS cannot conclude that "sustainability" will be achieved by using the same outmoded methods that lead to past chronic water shortages.

## Section 2. ALTERNATIVES CONSIDERED

Section 2 states: "The Draft EIS, in addition to the No Action alternative, however, will identify alternative(s) that contemplate a lease that permits less than the IIFS-enabled diversions, and will evaluate environmental impacts, benefits, costs, and risks of such alternative(s)."

Alternatives should include:

- shorter lease terms
- high, medium and low IIFS levels set by CWRM
- A&B use of only diverted waters outside of Lease area and County use of some lease area waters
- creation of additional large capacity storage, and A&B use of high flow waters to fill these new and existing reservoirs
- measures that can reduce the 22.7% system water losses and deliver more water with less diversion
- alternative management systems for the ditch system and watersheds, including:
  - o State acquisition, repair and maintenance of the diversion system
  - o Operation of the irrigation system by a nonprofit water system operator, providing water to multiple users in a manner consistent with the public trust,
  - o Charging market rates for water to generate sufficient funds for repair and maintenance of the system.
- alternative fee structure for the water leases
- alternative size of lease area, freeing public lands for more recreational use.
- elimination of whole lease areas from the proposed license agreement to allow for streamlife habitat
- restoration of stream flows to communities with no public water supply in the Huelo license Area who are not part of the East Maui IIFS Contested case petition
- using other water sources like wells, or streams that A&B already diverts outside the lease areas.
- making sure the water is used for agriculture. A&B does not have clear plans for agriculture, and their agricultural land is continuing to be sold.
- growing less thirsty crops
- allowing more access to public lands

- postponing action until actual streamflow data is gathered for each stream proposed to be diverted, including an evaluation of the benefits that would accrue by having real information on which to make decisions.
- just leasing the ditches and roads, instead of the entire 30,000 acres mentioned in the EISPN
- Leasing of a smaller area than is included in the four license areas.

o  
*[Note that per HAR 11-200, the discussion of alternatives shall include, where relevant, those alternatives not within the existing authority of the agency.]*

## 2.1 No Action Alternative

Section 2.1 concludes that: "As a consequence of this Alternative, in order to meet the objectives set forth in Chapter 1, both domestic and agricultural water demands in Upcountry Maui, as well as agricultural demands in Central Maui, would need to be met by alternative water sources that may include but are not limited to: desalinization of seawater or brackish groundwater or the extraction of fresh groundwater from wells that currently do not exist."

The DEIS should analyze what portion of A&B's water needs have been and can be met thru water from A&B lands outside of the License Areas through the EMI Aqueduct System. The system diverts at least 10 streams that are not part of the License areas.

Many sections of the EISPN conclude that the are No Impacts from the proposed action, therefore, none will be discussed in the DEIS. We believe the DEIS should consider the following impacts and discuss them in.

## Section 3.1 Climate

DEIS should mention of impacts of continued large scale diversions proposed in the event of climate change, and provide strategies for the EMI system to respond to changes in rainfall patterns. There should also be a discussion of funding needed to be resilient and grow the capacity of our watersheds to store and release surface and ground water that supplies the EMI system in response to changing weather events. The continued mass dewatering of streams will have impacts if rainfall patterns change.

## 3.8 Visual Resources

The DEIS should discuss impacts of proposed large scale diversions on the dry and diminished appearance of streams, pools and waterfalls enjoyed by the public during hiking and nature study and by local residents in areas like Ho'olawa, Hanawana, Mokuropa and Waipio.

### 3.10.4 Recreational Uses and Park Facilities

Section 3.10.4 states: "No significant impacts on parks and recreational facilities within the subject License Area are anticipated as hunting and hiking access to the License Area would be maintained under the issuance of a State Water Lease."

The EMI leases limit public use and enjoyment of public lands, as noted in comments from DNR lands division and Na Ala Hele. The proposed lease area also includes streams that are part of recreation use at such facilities as the Garden of Eden arboretum, Twin Falls Community and Camp Ke'anae. Recreational use of many streams in the lease area, especially in local neighborhoods such as Hanawana, Hoolawa, Mokuapapa, Honokala, Honopou and Huelo is already significantly impacted under the former lease conditions. The proposed diversions will continue those impacts and should be discussed.

### 3.10.5 Solid Waste

Section 3.10.5 states: "No significant impacts on solid waste disposal services or infrastructure are anticipated from the Proposed Action."

The DEIS should discuss EMI plans to remove decades worth of debris and waste from ditch system maintenance that has been left to clutter the natural features of the lease area. It is not accurate to conclude that the project will not generate any solid waste, when past activities already have generated significant waste, and this waste has not yet been removed.

### 3.10.1 Police and Fire Protection Services

If stream water is used for central Maui development there will be a cumulative impact on public facilities and services that must be considered. The EISPN is silent on those proposed uses, but A&B has "provided" stream water allotments to Maui County in the past to secure additional water meters for developments on A&B's own former agricultural lands (such as Haiku Hill, Haiku Makai). The full range of potential development impacts resulting from this type of water allotment should be discussed.

### 3.11.2 Traffic

The cumulative effects on traffic of A&B having access to millions of gallons of water to use for development if Ag operations "fail to be profitable" needs to be discussed as a real scenario. Even Maui County DWS has suggested in their comments that A&B's diversified agriculture plans may not be viable.

10

The following topics need to acknowledge existing and continuing impacts in the DEIS.

### 3.3.1 Hydrology

Section 3.31 states: "Of these 40 streams, A&B has historically operated diversions on 37, but abandoned the diversion of one stream in 2007, and is in the process of permanently abandoning all of its diversions on 5 additional streams, all as shown in Table 1-2."

There are far more than diversions than on the 37 streams in the license area. Dr. Milke's Decision & Order names 43 streams. Many of these streams also have multiple tributaries which are each individually diverted. The EISPN needs to fully describe the extent of the resource being impacted by the diversions.

Also, A&B already has or intends to abandon diversions on 8 streams: Waiakamilo, Wailua Nui (East and West) Palauhulu, Pi'ina'au Hanehoi, Puolua and Honopou. (July 18, 2016 CWRM order re: Interim Restoration of Stream Flow). The DEIS should contain this accurate information.

The DEIS needs to provide information on every stream in the lease area, including the amount of water that is diverted or planned to be diverted, from each section of each stream, each stream as a whole, each license area, and all licensed areas as a whole. This is not currently mentioned as needed data in the EISPN.

### 3.3.2 Groundwater

Nahiku to Keanae aquifer is believed to be fully saturated with no separated levels between Kula and Honomanu basalt layers. (Gingerich, 1998) This implication and the deep connection between surface and ground water in a "saturated" aquifer should be discussed in the DEIS. It should also acknowledge that diversions over the last century had significant impacts on the aquifers and watershed health, which continue to progress; the proposed lease would cause a resumption of those impacts.

### 3.3.3 Coastal Waters

Existing and ongoing impacts to our coastal waters and fisheries need to also be discussed in the DEIS. It should also acknowledge that East Maui diversions over the last century had significant impacts on coastal waters and fisheries, not just on Maui, but throughout the Hawaiian Islands; the proposed lease would cause a resumption of those impacts, and those impacts should be discussed.

11

### 3.5.1 Flora

We fully support the comments of USFWS regarding impacts of diversions on threatened and endangered flora and fauna in the Hanawi section of the lease areas. Significant native plant communities are also found above Puohakamoa, Waikamoi, Haipuana. Impacts of maintenance equipment bringing in invasive species needs to be discussed and mitigated.

### 3.5.2 Fauna and Aquatic Habitat

Impacts on endangered fauna and flora (plants and avian species) should be discussed, as well as impacts on existing native stream life resources and anticipated impacts on all native stream life species used for traditional practices. We concur with USFWS comments, which should be used to formulate content of the DEIS.

### 3.5.3 Historic and Archaeological Resources

Previous and ongoing impacts to archaeological resources such as lo'i, 'auwai and house sites in the lease areas should be fully documented, as these can be expected to continue if the proposed lease is granted.

### 3.5.4 Cultural Resources

Hamakupoko has cultural sites in A&B agricultural fields that should be identified and protected; Hamakulaoa also has cultural sites in the lease area lands that should have proper recording and protection. Old ditch structures such as the Spreckels Old Haiku ditch, are also deteriorating and drifting downstream in chunks. Impacts to gathering and cultivation of traditional crops should be addressed, including impacts in areas where no restoration is being proposed, such as the Hanawana and Kailua areas, Waipio and Waipio Iki, Hoolawa, Honokala, Makapipi and Mokupapa.

The DEIS should use Kepa Maly's East Maui study as part of the Cultural Impact Assessment.

### 3.9 Socio-Economic Characteristics

Cumulative Socio-Economic impacts of A&B controlling use of such a large amount of water for 30 years, as proposed, must also be discussed.

### 3.11.1 Diversion Infrastructure

DEIS needs to discuss abandonment of ditch structures on permanently restored streams and what happens to diverted water on streams while they await "permanent restoration." It should also discuss, the effect of diversion design and its impact on native streamlife migration, as well as the impacts/benefits of permanently removing all ditch structures on the

12

permanently restored streams. In addition, there should be a discussion of who controls the diversion structures, how any allowable streamflow amounts will be enforced, and the relationship that public access to the leased areas has on the likelihood of streamflow violations being reported.

### 3.11.3 Potable Water System

Some DWS Kula Pipelines intakes appear to divert streams in the lease area. The intake for the Nahiku DWS supply is in the lease area. Community water systems for Huelo, Honopou, Hoolawa, Waipio resident are in the lease area. What happens there affects many potable water users; this should be discussed in DEIS.

### 3.12 Secondary and Cumulative Impacts

The DEIS should include impacts of utilizing water for any uses other than agriculture that are anticipated over the 30 year term of the proposed lease.

### 4.2 Required Permits and Approvals:

If the IIFS limits diverted amounts on some streams in the lease area, it is possible that EMI may seek to obtain more water thru greater exploitation of the remaining streams in the lease areas. This should be discussed as a possible cumulative impact. Permits are already required and not complete for proposed restoration of 8 streams.

The DEIS should provide details of plans to restore stream courses and watersheds in the lease area where diversions are being permanently abandoned and removed, as well as impacts of such restoration.

Mahalo for the opportunity to comment.

Albert Perez  
Executive Director  
Maui Tomorrow Foundation

13

10238-02  
September 23, 2019

Mr. Albert Perez, Executive Director  
Maui Tomorrow Foundation  
55 North Church Street, Suite A-4  
Wailuku, HI 96793

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū,  
and Huelo License Areas

Dear Mr. Perez:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas, by providing your written comments on the EISPN, dated March 10, 2017, and your oral comments at the February 22, 2017 scoping meeting. We also appreciate Maui Tomorrow Foundation's early consultation comments provided by letter dated December 27, 2016 from Mr. Isaac Hall, Esq., on behalf of Maui Tomorrow Foundation, wherein he stated that Maui Tomorrow Foundation joined in the early consultation comments made by Native Hawaiian Legal Corporation (NHL/C) dated December 26, 2016. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments and the NHL/C comments have been appended to the Draft EIS in Appendix J (Pre-Assessment Consultation Correspondence) and Appendix M (Scoping Meeting and EISPN Comments and Responses). We have also enclosed a copy of our response to NHL/C's comments.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. Section 1.4 of the Draft EIS explains that in 2016, the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

10238-02  
Letter to Mr. Albert Perez  
Page 2  
September 23, 2019

mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.

3. Chapter 1 of the Draft EIS discusses the purpose and need of the Proposed Action.
4. Chapter 4 of the Draft EIS discusses the existing environment, impacts of the proposed action and mitigation measures. As relevant and appropriate, the discussion of impacts includes those pertaining to conditions before and after the closure of sugar cultivation in 2016.
5. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action, including alternative duration and diversion volume, as well as a No Action alternative. Section 3.1.1 of the Draft EIS discusses water source alternatives. Section 3.1.2 of the Draft EIS discusses alternative aqueduct ownership.
6. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
7. Truttia and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action and alternatives on indigenous freshwater species, terrestrial flora and fauna, and invasive mosquitoes. The Draft EIS discusses the impacts of the Proposed Action to freshwater species in Section 4.2.1 and impacts to terrestrial flora and fauna in Sections 4.4.1 and 4.4.2. Both reports are appended to the Draft EIS (See Appendix B and Appendix C).
8. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full or partial restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of Streams and the Ocean Water Chemistry (See Appendix A); Terrestrial and Flora and Fauna Report (See Appendix B); Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment

(See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

9. Figure 1-1 in the Draft EIS illustrates the EMI Aqueduct System overlaid on the Department of Land and Natural Resources (DLNR) Division of Aquatic Resources (DAR) geographic information system (GIS) data of streams. An electronic drawing of the EMI Aqueduct System was georeferenced by Akinaka & Associates, Ltd. to depict major diversions on East Maui streams on a United States Geological Survey (USGS) GIS base map. Due to the complexity of the EMI Aqueduct System and the level of detail shown on the map, not all of the minor diversions could be associated with a stream or tributary. The stream names shown are from the DAR GIS database but a few of those stream names may differ from how some East Maui residents may refer to them. Moreover, certain streams that were identified during certain proceedings before the Commission on Water Resources Management (CWRM) do not have associated GIS data and therefore could not be precisely located on the map. Table 1-2 in the Draft EIS reconciles discrepancies between stream names used in the February 2017 EIS Preparation Notice and the D&O.
10. Section 2.1.4 of the Draft EIS includes a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on estimates of available surface and ground water. Information from the D&O was used to estimate the maximum amount of water that can be diverted by the EMI Aqueduct System from the License Area. Section 2.1.1 discusses the Department of Hawaiian Home Lands' water reservation.
11. Section 1.3.4 of the Draft EIS discusses the D&O and the authority of the BLNR to issue a Water Lease for non-instream uses pursuant to HRS § 171-58, that is subject to the IIFS set by CWRM.
12. Section 2.3.1 of the Draft EIS discusses the Maui Department of Water Supply (MDWS) system, including water sourced from the EMI Aqueduct System. Figure 2-4 depicts the MDWS surface water supply system.
13. Section 2.1.3.2 of the Draft EIS discusses water needs for the Kula Agricultural Park.
14. Section 1.3 in the Draft EIS incorporates additional historical information from the Archaeological Literature Review and field inspection report (Appendix E).
15. Section 4.3.1 and 4.3.2 of the Draft EIS discuss climate change and sea level rise, respectively as well as the Assessment of Streams and the Ocean Water Chemistry (See Appendix A).
16. Section 4.9 of the Draft EIS discusses Visual Resources.
17. Section 4.8 of the Draft EIS discusses recreational resources and park facilities.
18. Section 4.14 and Section 4.15 of the Draft EIS discuss how the amount of water available through surface water diversion may impact public services and facilities; and, infrastructure and utilities, respectively.

19. Section 4.13 of the Draft EIS discusses potential traffic impacts of Mahi Pono's proposed diversified agricultural operations.
  20. Section 1.3.4 of the Draft EIS discusses the D&O.
  21. Section 4.2.2 of the Draft EIS discusses groundwater hydrology, including in East Maui.
  22. Sea Engineering, Inc. and Marine Research Consultants, Inc. prepared an assessment of streams and the ocean water chemistry in support of the Draft EIS. The Draft EIS summarizes this assessment in Section 4.2.3. The report is also appended in the Draft EIS (Appendix A).
  23. Cultural Surveys Hawai'i, Inc. prepared an archaeological report as well as a cultural impact assessment, which are summarized in Section 4.5 and 4.6 of the Draft EIS, respectively. These reports are also appended in the DEIS (Appendices E and F, respectively).
  24. Earthplan prepared a social impact assessment which is summarized in Section 4.7.1 and 4.7.2 of the Draft EIS. The report is also appended in the Draft EIS (Appendix G).
  25. Implementation of the D&O through modifications and adjustments to the EMI Aqueduct System is independent of the Proposed Action, which is the issuance of a Water Lease. Section 1.3.4 of the Draft EIS discusses the D&O.
  26. Section 4.16 of the Draft EIS discusses secondary and cumulative impacts of the Proposed Action.
  27. Section 5.8 of the Draft EIS discusses the permits and approvals related to the Proposed Action.
- Your written and oral comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

Ms. Mavis Oliveira-Medeiros

February 23, 2017

Haʻikū Park and Community Center

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

Enclosure (NHLC response letter)

MS. OLIVEIRA-MEDEIROS: But my name is Mavis Oliveira-Medeiros, and I come from Hana, Maui, Hamoa. But my mom and dad was -- my dad actually came from Nahiku, and my mom came from Olahino, both places that we were water people. So my mom was a gatherer. I don't know if anybody said that yet, but the gathering people need to be on that EIS. She taught us how to gather all the stuff growing in the fresh water ponds and rivers, and that's what we ate, that's what we ate to subsist. And then A & B took the water, and then we had our kids, and our kids had their kids, and it was never able to be passed on to the next generations.

So two generations, including me because I was a little girl when she used to take me in the rivers, so it's like three generations of people that were robbed of gathering, gathering food in the rivers. I cannot tell you how awful that feels. What was taught to us, we haven't been able to teach our kids. It feels like genocide, cultural genocide, when you cannot teach your children and theirs how to survive from the aina that they grow up around. That is a terrible, horrible thing. So I hope that you put that in your EIS, the gatherers.

There's also -- in Hana, there's tons of fishermen. So I wish you guys come to Hana too, on the list of wishes. Lots of fishermen, hula dancers, they rely on the water. And gatherers, we still have people who actually go in the EMI's ditches. I don't feel comfortable because it says "keep out, no trespassing." But there's people who still go in there and gather opai. So, you know, we still eat that stuff. In Hana, a lot of people in Hana still fish to subsist, to survive, to help put food on the table. That's another thing that you can add to the EIS. Subsistence. And if you ask me, I think you should put the people first and the corporation last.

Ms. Mavis Oliveira-Medeiros

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Oliveira-Medeiros:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and your oral comments at the February 23, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. Cultural Surveys Hawai'i, Inc. prepared a Literature Review and Field Inspection report of the License Area (Appendix E) as well as a Cultural Impact Assessment (Appendix F) in support of the Draft EIS. These studies are discussed in the Draft EIS in Section 4.5 Historical and Archaeological Resources and Section 4.6 Cultural Resources.
3. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian

Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

4. Sea Engineering, Inc. and Marine Research Consultants, Inc. prepared an assessment of streams and the ocean water chemistry in support to the Draft EIS. The Draft EIS summarizes this assessment in Section 4.2.3. The report is also appended in the Draft EIS (Appendix A).

Your oral comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

cc: Suzanne Case, Chair, Department of Land and Natural Resources  
A&B / EMI, Applicant

**Environmental Impact Statement Preparation Notice**  
**Proposed Water Lease for the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas**  
**Scoping Meeting Comments of**  
Ms. Megan Loomis Powers  
February 23, 2017  
Heʻiʻiū Park and Community Center  
**Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.**

MS. POWERS: Thank you, everyone, for all your incredible sharing and your spot-on, you know, right to the number responses. I grew up right next -- I grew up on Hoʻolawa Stream, which was an absolutely dry stream. And thank goodness for Stephen Cabral. He was the guy who managed the gates most of my life, the EMI gates. He knew that streams needed a certain minimum amount just to try and survive. And so every year, he would give us at least six weeks of uninterrupted stream flow. And what was so amazing is you would watch life start to return. And all the mosquitoes would get washed away, and the frogs would come back, and they'd eat the rest of the mosquitoes that were growing in the bananas.

And what we're here defending is that we know that is -- the East Maui watershed is the supply of water for the big half of Maui, and it's -- everybody's water depends on that. And if we don't steward that mountain, if we don't steward that watershed, if we don't take care of the plants that gather the rain and bring it down to the earth we're cutting off future generations. And we know that because we've lived there and witnessed it, like your beautiful child with some mysterious disease that you don't have any way to fix just withering in front of you. And the thing is living systems, they can only take so much abuse until something breaks, until you get cancer, until, oh, my goodness, how many species have gone extinct on the East Maui watershed in the last 120 years.

You know, that should be something in the EIS. How many species have gone extinct. So what I am observing is that there's been 120 years of severe mismanagement of this watershed that serves not only the people living here now but future generations and future generations and future generations. And that mismanagement also includes the 36,000 acres of A & B land that now doesn't even hold water because they never, not once, let land be fallow. They never gave back to the soil. There's no humic acid in the soil to hold water. I mean, we've seen studies. We've done it at the farm conferences. You pour water into A & B's soil, and it doesn't even make the dirt wet. It just runs around the outside and drips out. If you have healthy soil, it holds water. There's so many studies that show if you have good humic acid content in your soil, you can reduce watering by 70 percent. Wow, 70 percent of the water gets to stay in East Maui.

That's what we need. We need good management. This is just the beginning of like recognizing that. And what she said about going all the way back to the beginning, we need to -- this is not the baseline. Right here, this is not the baseline. The baseline needs to be way back when it was a healthy ecosystem; and we need to make plans, and this EIS has to direct that planning, to support bringing, regenerating and restoring what's already been damaged. And the same goes for the soil out in the valley. So I know I had something else to say, but thank you very much.

Wilson Okamoto Corporation

Re: EISPN for Proposed Lease for the Nāhiku, Keʻanae, Honomanu, and Huelo License Areas of Public Land, Maui, Hawaii

Dear Mr. Okamoto,

Māhalo for the opportunity to provide comments on this Environmental Impact Statement Preparation Notice (EISPN) for the use of water from four license areas consisting of 33,000 acres of public lands and waters in East Maui.

As a landowner/resident of Huelo who has legal rights to use the waters of Hoʻolawa and Hanapou streams I am personally affected by the A&B request to secure 30 year leases for 33,000 acres of public lands in the East Maui Lease areas. My lands and water right apply to the Huelo lease area. Our community has no public water system and we are entirely dependent upon rainfall and the streams for our water supply.

Myself and my family and my neighbors have been impacted by the long term diversions of our streams by A&B/EMI ditch system. Our streams are so completely diverted, by the four levels of EMI ditches that there is rarely any flow at all except during rainstorms. This deprives me and my family and my neighbors (approximately 45 people) of sufficient water for domestic and agricultural use, forcing us to have limited water available for our needs. Our lands are zoned Ag. We are required to have productive and functioning farms according to *farm plans* submitted to the County in order to qualify for agricultural tax rates. We do not have access to a consistent or reliable source of water to meet those farming requirements.

I request that the Draft EIS have a specific discussion of the impacts of A&B/EMI diversions on Hoʻolawa and neighboring streams that have never been included in the 2001 IIFS petition contested case. The discussion should include amounts historically diverted from each stream; amounts planned to be diverted from each stream; amounts planned to be restored to each stream to meet the legally protected rights of downstream communities (plant, aquatic and human) and actions proposed to care for the watershed productivity of the Huelo lease lands where the diversions occur.

In the last 45 years I grew up, played, went to school from, farmed, built a homestead and raised a family alongside Hoʻolawa stream. I have witnessed the stream be stagnant and mosquito infested for most of that time. I have witnessed invasive species overtake the last remnants of native species of plants and wildlife as the ecology changed due to lack of consistent stream flow. I have witnessed springs where we collected our drinking water dry up. I have lost agricultural crops to lack of water, which has discouraged any significant investment in future

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Powers:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas, your oral comments at the February 23, 2017 EIS Scoping Meeting, and for your written comments dated March 10, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
3. For the purposes of this Draft EIS, the stream list used was from the CWRM D&O.

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

farming operations until water is secured. I have also witnessed the wonder and brilliance of the stream coming back to life when stream flow was returned due to rainstorms, or Steven Cabral allowing the stream to flow 6 weeks every year. Although many species may never recover and return the stream to its original glory and vitality, the few that have survived will be thrilled and re-introduction of native species from other streams may be possible.

The Draft IES needs to acknowledge the damage that has been done to the watershed and downstream animal, plant and human communities since the inception of the diversions. Many communities outside and downstream of the Lease areas have been devastatingly affected due to radical changes in habitat. Fisheries have nearly collapsed due to their nurseries being eliminated. The Hawaiian community whose culture of gathering stream related food sources and sharing them with other farming and fishing communities was destroyed.

The Draft IES needs to document the damage to stream, aquatic and amphibian life from the spraying of Round-up and other pesticides along the ditch. I witnessed first-hand the toad and frog population, which helped to control the mosquitoes, nearly disappear when the ditch spraying began in the mid-1980's.

As the largest watershed on the island of Maui, its care and proper management (maintaining a thriving ecosystem that collects and stores water – I'm not talking ditch system here) is paramount to the livelihood of current and future generations on all of Maui. A&B/EMI have not shown good stewardship over this ecosystem for the last 120 years and do not deserve to be given the "Golden Goose" again.

I request to be a consulted party during the entire EIS process for the proposed Lease request.

Sincerely,

Megan Loomis Powers

Megan Loomis Powers and Ohana

4. Truttia and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the Draft EIS (See Appendix A and Appendix C).

5. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended to the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Environmental Impact Statement Preparation Notice  
Proposed Water Lease for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas  
Scoping Meeting Comments of

Mr. Michael Pasco

February 22, 2017

Maui Electric Company Community Meeting Room

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. PASCO: I'm Michael Pasco. I want to save some of the comments about the taro farmers and about the agriculture, those -- those remarks were spoken for it seems like well today. But touching on a little bit the minimum flow standards, I know that's part of the CWRM process, but I just want to make sure that when we're looking at the ecosystems here, the CWRM process, that it's ecosystem based and not the needs of A&B based about what can be taken from the -- taken from the streams. And I echo those comments about maintaining mauka to makai connectivity not just for the health of the fishes for the fishermen, but, you know, I just want people to make sure we're keeping track of the fact that the fishes that are produced on East Maui side, they don't just stay and effect East Maui, you know, that affects the entire island and even neighbor islands. And especially when we have like 80 percent or so of our modern economy based on visitor industry and stuff like that, a lot of us here have jobs that are connected to the visitor industry and we need to make sure that we're protecting those resources also for our economy.

The other thing I want to talk about is the ecosystem-based flow standards, I want to make sure that we're also keeping enough movement in the water to keep the mosquito populations down because the mosquitos, when the -- when the stream flow gets too low, the mosquito populations come up and that affects the native birds. And we need to make sure we're protecting all of the native resources, the native plants, the native birds, you know, with the -- without those native animals or plants, you have no Native Hawaiian culture and we need to sure to be protecting those things. The other thing that we're talking about with the -- with the water is we're talking about this being such a -- such a cherished resource, so I want to make sure the EIS is addressing the management of that resource. We're seeing, you know, like 20 percent or so leakage and seepage and that doesn't sound like treating this resource like the valuable resource that it is.

And the last thing I want to say, the -- when we're talking about sustainable local agricultural for food production, I want to make sure that we're looking at it with the -- with the aspect of what's happening in the other parts of the world. Like the other gentleman was saying, there's -- particularly California, you know, we're looking at the Oroville dam situation and I know that impacts so much of the food that is produced in Southern California. And they're talking about -- worrying about that dam failing and what that's gonna do to all of the food prices that all of us pay since we're not producing enough food on island. So I hope that that's factored into this decision-making process about where we're going to be getting our food if events in the world make it so that we were not getting as much from across the ocean.

February 22, 2017  
And I guess lastly I just want to state that, you know, because over the years we've seen that A&B has been such poor stewards of the -- of the resource, flushing stuff out to sea when they're not use it, I want to make sure that we have public access to the -- to the ditches so that way some verification can take place, because we haven't been able to count on the words and actions of A&B over time to manage our resources. So that's all I want to say.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Pasco:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and your oral comments at the February 22, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued *"right, privilege, and authority to enter and go upon"* the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the *"purpose of developing, diverting, transporting, and using government owned waters"* through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
3. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the Draft EIS (See Appendix A and Appendix C).
4. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource

**Scoping Meeting Comments of**

Ms. Michelle Waikiki

February 23, 2017

Ha'ikū Park and Community Center

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MS. WAIKIKI: My name is Michelle Waikiki. And this is a message from my husband to the EIMS --or EIS tonight. The Department of Water Supply, County of Maui, released their statements of cash flow audits done by M & K CPAs. In their audit, cash received from the public trust and others, from 2013 to 2017, equal \$200 million. Payments to suppliers, A & B, HC&S, EMI and Wailuku Water Company from 2013 to 2017 surpassed \$100 million. All suppliers are ditch operators. They are all selling state-owned water to the County and charging the public trust at a 33 percent or more increase. The public trust pays water bills to the County, who then pays A & B, EMI, HC&S and Wailuku Water Company to transport the water to the County grid. The public trust doctrine simply has no representation.

This is theft and fraud and other crimes because these operators are in violation of expired water licenses, expired leases, EIS audit violations, violation of HRS 167, failure to public auction, year to year revocable permits, violation of HRS 271G, Hawaii Water Carriers Act, violation of HRS 271G-10, violation of 271.12, under the PUC, PUCC, PCN. And the County of Maui is an accessory to these violations. Only a federally regulated public water utility company, publicly traded stock corporation, bonded and insured, providing water, can meet all of these requirements and lawful demands by representing and enforcing the public trust doctrine. Maui Electric Company is a public utility company, providing electricity to the public trust. In final, all of you, meaning the board, should be arrested for fraud, plundering and pillaging.

And then I would like to also say for myself, like, I would like to propose that the Hawaiians get together and we figure out how we can figure you guys out through blood quantum. I know my husband is 100 percent Hawaiian. They threw him in prison for 20 years over this water, over \$141,000. So I hope -- before he went to prison, he put videos out, which are on my Facebook page. The 1863 water course agreement, with my husband's two grandfathers' names on it, he created an EIN for Maui water utility company. So we need is the public to come together, and we use this Maui water utility company to put the water in the public's hands, not HC&S, EMI. And then we also have a document that is a Supreme Court order right here -- from 1914 to present, the American government owes the Kingdom of Hawaii, it's 74 billion on this paper, but it's about 125 billion now. And in court, Judge Nishimura ruled that A & B water permits are invalid. I have 11 file boxes full of information. I've proved my husband innocent beyond a reasonable doubt and this state guilty of fraud. And I want my husband out of prison. He don't belong in prison.

Thank you.

## Environmental Impact Statement Preparation Notice Proposed Water Lease for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas

### Scoping Meeting Comments of

Mikiala Pua'a Freitas  
February 22, 2017  
Maui Electric Company Community Meeting Room  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

My name is Mikiala Pua'a Freitas. I'm a Native Hawaiian and my ohana has been on Maui for many generations. You know, this meeting should be held in East Maui so that, you know, everyone here and you folks as well can look the people of East Maui in the eye and talk about their resource that we're trying to do all these other things with, first and foremost. Maybe consider doing an environmental impact study on the generations of East Mauians that have lost of a way of life and continue to be oppressed by these diversions, so let's start there, you know. After 120 years of diverting the water, it's great that they're doing an environmental impact statement, but maybe look a little deeper and really look at what's been going on out in East Maui and not just argue and bicker about the water that should be out there and the uses that everybody wants to use their water with, you know. The people – the things that don't have voices, you know, the -- like the natural environment out there that doesn't have voices, you know, who's going to be speaking for them? So we need to consider an environmental impact study to be done on, you know, these people that have been effected, the people and environment that have been affected for 120 plus years.

Secondly, I think, you know, are you guys adequate enough to do this study for a 30-year lease, you know? I mean, is that a recommendation that you folks feel comfortable with, doing a study that's potentially going to influence a lease for 30 years. Maybe you recommend doing year to year if -- you know, if you can have any kind of input along the lines of that, you know. Thirty years is a long time and, you know, will your study be adequate enough for that? More public involvement, oversight, and transparency and less privatization, you know. I understand the need for existing homes and businesses and, you know, ranchers and everybody that's using the water right now, but, you know, why does the people of East Maui and, you know, the environment of East Maui have to put future developments and future business ideas and expenditures on their shoulders? You should be looking at, you know, alternative water resource -- I mean alternative water uses, you know, A&B should be looking at alternative water uses, you know, whether it be catchments or swales. Yeah, like uphold their end of the bargain and --

You know, as a kalo farmer, you know, the reason you hear so much about kalo farming and whatnot, is, you know, as a kalo farmer you use the water and then the water continues to be used. It's not you take the water, use it for one crop, and it replenishes a different aquifer from where it came from. So, you know, that's why you hear about the kalo farmers and the water is they still have that system of sharing and using the water for, you know, the things that don't have voices. So, you know, let's really -- yeah, I don't know how to end it, but that's basically my concerns and you want to follow up with. You got it?

10238-02

**Subject:** EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Wilson Okamoto Corporation,

Another 30 year water lease to A&B is ludicrous. The water belongs to all of the citizens of Maui and should not be leased to any one private entity for 30 years. This is an antiquated system that needs to be changed and be fair to all. The citizens of Maui should be the ones to decide the fate of this request. The BLNR should certainly NOT depend on an EIS report that has been paid for by the requesters. How fair do you expect that report to be? It is time to change this whole process of how this water has been allowed to be stolen from the people by the very departments that are supposed to represent the people and are paid for by the people. Let's once and for all clean up this system whose time has come for redirection.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. It is important that this long-awaited EIS is done correctly, which means the process should be directed and paid for by DLNR and include a thorough analysis of all possible impacts from and alternatives to A&B's proposal. I ask that DLNR work on behalf of the people they are paid to represent and not private interests..

Mahalo for your time.

Sincerely,  
Miranda Camp

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū  
and Huelo License Areas

Dear Ms. Camp:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas and for your written comments dated March 9, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.

3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.
4. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended to the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I)

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Mr. Moke Kiamoe & Ms. Kahikina Kiamoe

February 22, 2017

Maui Electric Company Community Meeting Room

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. KAHIAMOE: My name is Moke Kahiameoe. I come from Huelo. I live by the stream. My family all from there from way back when they started doing the ditches. The thing I like you guys to remember when you looking at all this, everybody, the county (inaudible). I -- for right now, the -- you trying to take care of your -- there's so much to take care of this world going on, but I only can take care so much and the first thing is my ohana. So because now your parents getting older, sick, this, that, you get pulled away from the actual water situation going on. So the thing that I want to address is that this 30-day window, we gotta come in and make one decision, you know, that's pretty quick, yeah.

FACILITATOR SENELLY: Actually, it's not to make a decision, what --

MR. KAHIAMOE: But either way --

FACILITATOR SENELLY: Yeah, yeah, yeah.

MR. KAHIAMOE: We pick out points because what we talking about, 30 days is nothing, yeah.

FACILITATOR SENELLY: So what's going to happen is what you guys tell us during these 30 days is what they have to study, which will probably take months. So the things you bring up, that is the basis for the studies that they're going to look at. Your comments will be in the EIS and it'll help frame what is in the EIS.

MR. KAHIAMOE: Okay.

FACILITATOR SENELLY: Yeah.

MR. KAHIAMOE: Okay. That's what I was --

FACILITATOR SENELLY: Okay.

MR. KAHIAMOE: -- gonna bring you back to here. Because we've been going through this problem for way hell a long time. And probably me, I'm gonna (inaudible) before this thing get done, because there's other people, our parents, going, my grandparents going. Our cousins, they leave Keanae. They (inaudible) started all this stuff. We're talking about the same kind of things going on. But you know what, the water has been going. I live by 'em, I go up, I check all the time, yeah. Things are changing, the

Scoping Meeting Comments of Mr. Moke Kiamoe and Ms. Kahikina Kiamoe

Page 2

February 22, 2017

environment change, the trees not growing because they took the water away, you know, and something else that stay inside the land right now that we found out -- I went up and I seen something that is -- that is -- I have never seen in my -- since I was born stay in the stream. Now, whether or not it came -- if people threw it and it went in the water or the water wasn't there, that's why it grew up, I don't know. It's lot of stuff. So one we need to look at is that not only the streams that carry the water, but the places where the water do reach, but it's through spring, not necessarily on that water -- I mean that river itself, need to look at.

And then the next thing is when we dam stuff -- because I see the water come, go, come and goes, so I don't know where the thing going. I think -- I don't see 'em coming, yeah.

FACILITATOR SENELLY: So we've heard this before too, you want to know what the flows are and that -- how it's managed and stuff, yeah, where the flow goes. Are you signed up?

MS. KAHIAMOE: No, but I'm his daughter. Can I say something really quickly?

FACILITATOR SENELLY: You gotta talk like him then.

(Laughter.)

FACILITATOR SENELLY: No, no, no. Tell us your name. Tell us your name.

MS. KAHIAMOE: I can talk like him.

FACILITATOR SENELLY: Okay.

MS. KAHIAMOE: My name is Kahikina Kahiameoe. I live in Huelo. And I think the EIS should address the people that actually gets the water.

FACILITATOR SENELLY: Okay.

MS. KAHIAMOE: As far as -- I see the environmental issues as far as the fishermen and the farmers, but I'm talking about the people like myself, because I -- these clothes that I'm wearing, I wash them from that water that comes from that stream. We bathe in that water, you know, we wash our dishes, everyday use comes from that water. So I would like them to address the people and their normal daily lives that they need to do and that water that comes to their house.

FACILITATOR SENELLY: The social part.

MS. KAHIAMOE: Exactly. The modern day living.

FACILITATOR SENELLY: Okay. Everybody, I diverted, 'cause I let her talk, but we will still try to stay in order.

Okay?

MS. KAHIAMOE: Okay. Thank you.

Mr. Moke Kiamoe and Ms. Kahikina Kiamoe

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. and Ms. Kiamoe:

Thank you for participating in the scoping process for the subject Environmental Impact Statement pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and your oral comments at the February 22, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
3. For the purposes of this EIS, diversion quantities from the D&O were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area.
4. The Draft EIS assesses impacts to socio-economic characteristics associated with the Proposed Action in Section 4.7 of the Draft EIS, as well as in the Social Impact Assessment (See Appendix G) and Economic and Fiscal Impact Study (See Appendix H). Existing conditions and impacts of the Proposed Action, including the impacts from modification or removal of diversion structures in streams designated for full restoration by the D&O, will be included in Chapter 4 of the Draft EIS and various technical studies, such as: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

As A resident of Nahiku I would like to express my grave concern over the use of the water streams of Nahiku, Keanae's, Huelo. The Board of Land and Natural Resources should realize this water should rightfully belong to the local residents and farmers. The Board should support the smaller family farms of East Maui. Not corporate farms from outside!

And certainly not developers! These outside interests won't even give you detailed plans for our water's use. It's NOT fair - it's NOT Right! = this is your opportunity to help us put an end to the gross misuse of our beloved resources. - respectfully, Mrs. Mugs Ivanovich

**Scoping Meeting Comments of**

Ms. Nalani Kanenau

February 22, 2017

Maui Electric Company Community Meeting Room

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MS. KANENAU: Okay. Aloha kakou. My name is Nalani Kanenau. Mahalo for everyone to have my voice heard today. For me, it is no coincidence that today, a day water protectors from Standing Rock are being forcibly removed from the Oceti Camp trying to protect the water, that I, a Native Hawaiian, am here to testify to protect water. And this is my first time, so (inaudible).

I would like the EIS to address agricultural needs and that sustainable crops are found with any combination of co-op farmers. I would love A&B to be transparent in their plans for whatever mass farming that they're wanting to get into. I'd also like that there is no action until actual stream data -- stream flow data is gathered for all of the streams proposed to be diverted and that the repair and maintenance of the diversion system is cared for, cared for by charging of market rates for water to generate sufficient funds to keep that repair and maintenance going.

I'd like the EIS, EIS statement to look at impacts on aquatic life, native plant species, and traditional and customary Hawaiian practices, kalo farming, gathering native plants, and kahua dancers, recreation, et cetera. I believe we need real farmers, not rich gentleman farmers. If you go to the A&B website, there's -- you can become an investor of their gentleman farmers. I need to know that A&B truly has the interests of Maui at heart. I need A&B to honor the tradition of taking only what you need and not taking all that you can. Mahalo.

**Environmental Impact Statement Preparation Notice**  
**Proposed Water Lease for the Nāhiku, Keʻānae, Honomanū, and Huelo License Areas**  
**Scoping Meeting Comments of**

Mr. Nik Hilananda  
February 23, 2017  
Haʻikū Park and Community Center  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. HILANANDA: First of all, I wanted to refute the fake news -- we all know what that is now -- on the front page of the finest daily paper here on Maui, which said that yesterday at the meeting at MECO -- and it's interesting to have a meeting at MECO but not in Hana or Keānae -- that without the lease -- and, of course, a former County councilmember said this, and it was quoted in the paper -- without the lease, upcountry would have no water. Okay. Let's get rid of that fake news right away.

Next, the lease, A & B is going to donate the ditch system, and I had to the County. But thinking about it here, I changed that to some kind of publicly controlled trust. They could donate the delivery system to us, the people, because they've already made -- as has been said already by many people, they've already made millions and millions of dollars. EMI employees know that ditch system to be hired by this public entity to run the ditch system. I also want to say, before I go on, I wanted to incorporate in my testimony the brilliant testimony of people before me. It just got me. People have been here for generations. I bought my property 20 years ago. Mokuapapa Stream is totally bone dry. 20 feet west of my property, it blocks all the water. On December 31st, that big storm, 5 feet, it almost was over me, running through my streams, wiping out all the vegetation, all the trees and a hundred foot across in that streambed, running like the Wailuku River. I've been there 20 years, I've never seen that. It was incredible. That's how some of these streams used to be. Those who have been here for generations know that.

Somebody had earlier mentioned that the Maui Police Department was here and said they'd never seen that. Everybody said no, no, no. About 10 or 15 years ago, maybe 10 years ago, 12 years ago, there was a meeting right here in this very room, and there was just as many police here. Now who asked them to come and why is it a coincidence that it's another water meeting?

UNIDENTIFIED SPEAKER: EIS, EIS.

MR. HILAWANDA: I do want to thank you for saying "EIS, EIS," because what I really liked about this meeting, you guys who know only a little bit and you've been educated by the people, did you notice we weren't held to a three-minute testimony?

MODERATOR SENELLY: Actually, people came up to me, and they wanted -- we don't do that.

MR. HILAWANDA: Okay. So I want to thank you for that, because the passion of some of the people here, you can't cover that in three minutes, like when the County Council or whatever meeting says,

we're going to give you three minutes. It was incredible. You know, it's funny, I'm up here for about five minutes to seven minutes, and other people go -- and I know it's the end of the day, and half the people left, and it's fine. That's why I cut this down to just a couple of points. I hope I don't miss them.

So by the way, A & B is not going to get the 30-year lease. They're not even going to get -- hopefully, a one-year lease, but they're not going to get the 30-year lease because of what's happened in this room today. And it's not stopping here. It's been going on for generations, you guys know. So the EIS -- but we have to stay on top of that. And just as a side mention, I want to talk about development. There's about a half a dozen developments right here around Haiku already, just popping up, that we don't even know about, right here around the Haiku Community Center here. So it's going to keep on happening, keep on happening, keep on happening. People have mentioned some of the other ones. And I think that's about the things that I wanted to add that I didn't hear people talking about.

But again, now put in your EIS that A & B does not deserve it. The people should have the water and the people that live on the East side of Maui. And there's plenty of water. For the people that need the water upcountry, somewhere else, can then ask the community of East Maui, hey, could we have some of your water, not the other way around.

Thank you, Berna. You run a brilliant meeting.

**Date:** Friday, March 10, 2017 4:36:15 PM

---

Dear Earl Matsukawa,

Aloha: I have land which has the dry creek bed of Mokuapapa stream run through it. Twenty feet west of my property line is an EMI dam which blocks 100% of the water from the stream. West of the dam, it continually flows 365 days a year. East of the dam, it is dry over 350 days! This is reprehensible and the time has come to deny A&B and EMI the continual environmental destruction which they have wrought on mine, and most of the East Maui streams for 150 years. They have been a terrible steward and to reward them with even one more day is sacrilegious. All of the natural fauna and flora are gone. Mosquitoes are now dangerous and terrible result of their destructive practices.

Our State Constitution says that water is a public trust, held for the people of Hawai'i. Yet this multi-national, for profit, land development company has made hundreds of millions of dollars by stealing this natural resource and selling it back to the county and State.

Enough is enough

Mahalo.

As you know, BLNR has tasked A&B with the job of commissioning a consultant to prepare an EIS for its proposed 30 year Water Lease for East Maui streams which, if granted, would give A&B the continued "right, privilege, and authority to enter and go upon" the Nahiku, Ke'anae, Honomanu, and Huelo License Areas.

Because A&B is in charge of procuring the EIS, I am worried that it will not include a thorough study of both the full environmental impacts and alternatives to a 30 year lease. It will also give A&B an unfair advantage if and when the lease goes up for public auction, as it is legally required to do so. By tasking A&B with commissioning and paying for the EIS, this government process has lost legitimacy because it appears slanted in A&B's favor.

To remedy this, I request that the DLNR instead pay for and direct the consultant for this EIS. Only if this is done will core parts of the EIS - the definition of the current environment and the identification of alternatives - be comprehensive and encompass all the possible outcomes for the management of these waters and areas. This will also help instill trust that the completed EIS will be impartial and independent of A&B's specific wants.

No matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on aquatic stream life and Native Hawaiian cultural practices. The EIS should also explore multiple alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. It is important that this long-awaited EIS is done correctly, which means the process should be directed and paid for by DLNR and include a thorough analysis of all possible impacts from and alternatives to A&B's proposal. I ask that DLNR take direct control of this process as soon as possible.

Mahalo

Nikhilamanda

Sincerely,  
Nikhilamanda

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū  
and Huelo License Areas

Dear Mr. Hilananda:

Thank you for participating in the scoping process for the subject Environmental Impact Statement pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas, your oral comments at the February 23, 2017, and for your written comments dated March 10, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawaiʻi Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawaiʻi Revised Statutes (HRS) Chapter 343 and Hawaiʻi Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on diversion quantities from the Commission

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

10238-02  
Letter to Nihkilananda

September 23, 2019

on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).

4. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.
5. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the Draft EIS (See Appendix A and Appendix C).
6. The impacts from modification or removal of diversion structures in streams designated for full restoration by the D&O will be discussed in Chapter 4 of the Draft EIS, as well as the various technical reports done for the Draft EIS, including: the Social Impact Assessment by Earthplan (See Appendix G) in the Cultural Impact Assessment (See Appendix F), and the Agricultural and Related Economic Impacts Report done by Plaseh Econ Pacific, LLC (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

Re: Comments on the Environmental Impact Statement Preparation Notice (EISPN) for the Proposed "Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas" being proposed by Alexander & Baldwin Inc. and East Maui Irrigation Company, Limited, situated at TMK Nos. (2) 1-2-004:005, 007 (por.), 1-1-001:044, 1-1050, 2-9-014-001, 005, 011, 012, 017 in the Makawao and Hāna Districts, on the island of Maui

Aloha e Mr. Hirokawa,

The Office of Hawaiian Affairs (OHA) appreciates the opportunity to review and comment on the above-referenced Environmental Impact Statement Preparation Notice (EISPN) and application by and for Alexander & Baldwin Inc. and East Maui Irrigation Company, Limited (collectively "A&B"), who are seeking a long-term, thirty-year Water Lease pursuant to HRS §171-58(c) for the "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'ānae, Honomanū, and Huelo license areas (collectively the "License Areas") "for the purpose of developing, diverting, transporting, and using government-owned waters." (Collectively the "Proposed Action.") This application relates to issues of past, present, and future significance which have required considerable review before responding. OHA apologizes that its comment is being submitted after the requested due date, and thanks the applicant for its previous agreement to consider the agency's analysis.

OHA appreciates the applicant's decision to proceed with an EISPN, and its acknowledgement that the "potential for significant environmental impacts requires the

Mr. Ian Hirokawa  
April 4, 2017  
Page 2 of 7

preparation of an EIS."<sup>1</sup> OHA's analysis and comments in response to the EISPN are limited to that document, while acknowledging that there are pending matters before the Commission on Water Resource Management (CWRM) regarding interim instream flow standards (IIFS). Finally, OHA's comments should be viewed as preliminary in nature, and will be supplemented as additional information is provided throughout the Chapter 343 process.

As the constitutionally-established agency possessing kuleana (responsibility) for protecting and promoting the rights of Native Hawaiians, OHA holds substantive obligations to advocate for Native Hawaiians, and to assess policies and practices as they may impact the rights and resources of Hawai'i's indigenous people. HRS §10-3(3) also designates OHA as "the principle public agency in this State responsible for the performance, development, and coordination of programs and activities relating to native Hawaiians and Hawaiians." OHA seeks to fulfill this kuleana not only with respect to those rights that extend specifically to Native Hawaiians by nature of their unique legal status; but also those laws of general applicability to Hawai'i and its people. This includes Article XI, §1, which lists water among those public natural resources "held in trust by the State for the benefit of the people," and also Article XI, §7, which confirms the State's "obligation to protect, control, and regulate the use of Hawai'i's water resources for the benefit of its people."

OHA is highly mindful of the unique value that Native Hawaiians have ascribed to wai (fresh water) since time immemorial, and which continues to be upheld in state law today. In pre-contact times, land, water, and other natural resources were not to be owned, but to be stewarded for the benefit of the general public. This worldview was reflected in the Kingdom of Hawai'i's first Constitution, which described the natural resources of the 'āina (land) as a public resource that "was not [the king's] private property. It belonged to the chiefs and the people in common, of whom [the king] was the head, and had the management of the landed property."<sup>2</sup> This concept continues to be embodied in Article XI of the State Constitution, as well as in the State Water Code, HRS Chapter 174C, and in a long line of judicial precedent from the state courts. These ancient values stand alongside the growing understanding amongst the scientific community of the fragile nature of the systems of abundance that make life and commerce possible in the world's most isolated inhabited archipelago.

OHA therefore emphasizes the legal and cultural significance of the application underlying the EISPN, which would grant a private landowner a thirty-year lease to control water resources that are considered to be held in trust for the public benefit. An inescapable consequence of the approval of the Proposed Action is that members of the public, including subsistence farmers affected by the water diversion, may continue to be denied the benefit of the very resources that our State's constitution promises are held in trust for them. Compounding the issue, OHA notes that this is a proposal to continue the diversion of stream water from the License Area that began in the 1870s, to the benefit of certain commercial and public interests, but at the expense of others.

<sup>1</sup> Applicant's EISPN, S-2

<sup>2</sup> See KING, HAW. CONST. OF 1840; D. Kapua'ala Sproat's Chapter "A Question of Wai: Seeking Justice Through Law for Hawai'i's Streams and Communities" in *A Nation Rising: Hawaiian Movements for Life, Land, and Sovereignty*, edited by Noelani Goodyear-Ka'ōpua Kaika Hussey, and Erin Kahunawaikua ala Wright.

OHA offers five general comments for your consideration as you prepare the draft EIS.

**1. Applicant should consider multiple alternative diversion volumes, including the alternative of discontinuing the diversion of fresh water entirely.**

Hawaii's environmental review regulations require a draft EIS, in its review of a proposed action, to meaningfully consider a range of alternatives, including alternatives "that might enhance environmental quality or avoid, reduce, or minimize some or all of the adverse environmental effects, costs, and risks."<sup>3</sup> The analysis of a "no action alternative" is explicitly called for, as well as alternatives that include actions of a "significantly different nature" or that relate to "different designs or details" which may result in different environmental impacts.<sup>4</sup> Notably, "environmental impact" is defined to include "an effect of any kind, whether immediate or delayed, on any component of the environment," i.e., "humanity's surroundings, inclusive of all the physical, economic, cultural, and social conditions . . . including land, human and animal communities, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance."<sup>5</sup>

In order to satisfy the alternatives analysis requirements of the law, any draft EIS should therefore include both a specific action proposal, as well as alternative actions that may result in lesser impacts to the natural, cultural, and socioeconomic environment. Given the clear and significant environmental impacts that have and continue to result from the diversion of East Maui's streams, the subject EIS should at a minimum contain a specified proposed amount of water to be diverted, as well as alternatives that involve the diversion of less or no water at all. However, while the EISPN early consultation request originally described a proposal to divert 100 million gallons per day (mgd) of "government-owned" i.e., public trust, water from the License Area for a period of thirty years, the notice to which OHA is responding to at this time does not specify the amount of water being proposed for diversion. Without such specificity, it may be difficult if not impossible to analyze the impacts of the Proposed Action, or provide comparative analyses of the lesser impacts of alternative diversion scenarios.

Accordingly, the draft EIS should provide the specific amount of public trust water to be requested by the applicant, and any alternative scenarios involving the diversion of less water. Such scenarios may include variations in end water uses and crops; infrastructure maintenance and development to increase efficiency and decrease the need for diverted water; and diversion practices that minimize diversions during low-flow conditions. OHA understands that several parties have already recommended that the draft EIS include multiple alternative diversion volumes.

Lastly, OHA appreciates the applicant's stated commitment to include an alternative of no action, which we interpret to mean the exploration of an alternative where no license has been

<sup>3</sup> HAR § 11-200-16(f) ("The draft EIS shall describe in a separate and distinct section alternatives which could attain the objectives of the action, regardless of cost, in sufficient detail to explain why they were rejected. The section shall include a rigorous exploration and objective evaluation of the environmental impacts of all such alternative actions. Particular attention shall be given to alternatives that might enhance environmental quality or avoid, reduce, or minimize some or all of the adverse environmental effects, costs, and risks." (emphases added)).

<sup>5</sup> HAR § 11-200-2.

granted, resulting in the end of diversions and the full restoration of streamflows. OHA notes that while the EISPN described several potential downsides to an alternative of no action, the draft EIS should, at minimum, pay equal attention to potential benefits of a no action alternative to East Maui residents and others.

**2. Applicant should consider multiple shorter alternative lease periods for use of the License Area and its public trust water.**

For similar reasons, OHA recommends that the draft EIS include shorter alternative lease periods, which may allow for the adjustment of diversion allocations to account for changing climate conditions, end uses, population increases, or other reasonably foreseeable circumstances. Both the early consultation request and the application in question seek use of the License Area and the diversion of public trust water for a period of thirty years. It is unclear why the applicant considers a lease of this length to be optimal, or what differences in benefit the applicant anticipates from a lease of a shorter period. Notably, a lease of this length may lock the State into a situation where critically needed public trust resources are unavailable for public use for decades, without potentially costly legal intervention.

Accordingly, OHA joins several parties who commented on the early consultation request in recommending that the draft EIS include multiple alternative lease periods. OHA recommends that the multiple periods be no greater than thirty years, a period for which OHA already has concerns. If the applicant believes that the State is able to provide such a lease in a manner consistent with its trust obligations, OHA encourages the applicant to provide its rationale in its analysis of these alternatives.

**3. Applicant's exploration of impacts and mitigation measures must consider current and cumulative impacts caused by diversions up to this point. OHA does not accept the framing of current diversion as neutral in impact.**

In its section on "Existing Environment, Potential Impacts to be Explored, and Mitigation Measures," the applicant repeatedly stresses that a granted lease would "maintain existing conditions, subject to the pending IIFS decision and any reservations in favor of DHHL."<sup>6</sup> It is unclear as to whether the applicant intends to limit its review of potential environmental impacts to those which go above and beyond current impacts (of current and historical diversions), or whether there will be due attention given to how stream diversions have impacted and currently impact members of the public, including East Maui communities, and the environment. Limiting the EIS' analysis in such a fashion would appear to be at odds with the applicant's responsibility to consider cumulative impacts of the Proposed Action, which the applicant acknowledges as:

Cumulative impacts refer to the impact on the environment which results from the incremental impact of an action when added to other past, present, and reasonably foreseeable future actions regardless of what agency, or person undertakes such

<sup>6</sup> While it is not treated as its own topic in this comment, OHA joins the Department of Hawaiian Homelands in urging that the applicant's analysis of the Proposed Action consider any impacts to DHHL and homesteaders, especially in light of DHHL's Maui Land Inventory and Maui Island Plan.

other actions. Cumulative impacts can result from individually minor, but collectively significant impacts taking place over a period of time.<sup>7</sup>

Any proposed diversion scenario would extend the impacts that have and continue to occur due to the diversion of East Maui's streams, and should therefore be analyzed cumulatively with these impacts. In other words, the impacts of historic and ongoing diversion actions cannot be ignored, by simply framing them as "existing conditions."

Moreover, the treatment of historic diversions as "existing conditions" not meriting an environmental impact analysis begs the question as to what the present EIS actually intends to analyze. For over a century, diversions have dewatered streams throughout East Maui, disrupting ecological and hydrological cycles, altering native habitat, and displacing communities reliant upon fresh and abundant water flow for their cultural, subsistence, and socioeconomic needs. The Proposed Action to grant a lease would result in the continued accumulation of such impacts for thirty years, the analysis of which would appear to be the very purpose of the instant EIS. Accordingly, the impacts of any historic or current diversions that may be continued by the Proposed Action cannot be dismissed as "existing conditions" not meriting careful consideration and analysis.

OHA therefore recommends that the applicant's draft EIS include the current and historic impacts that have resulted from the diversion of public trust water from its natural pathways from mauka to makai, and that would continue to accumulate as a result of any proposed action. The draft EIS should specifically consider possible adverse impacts to traditional and customary practices, the natural and cultural resources they rely upon, and the particular attributes of East Maui in general. These include, but are not limited to:

- Kalo cultivation;
- Estuarine and stream cultivation;
- Gathering areas;
- Aquifer recharge;
- East Maui's communities' unique character as kipuka for Native Hawaiian culture, values, and subsistence lifestyles;
- Key habitat for stream and coastal species, including species unique to East Maui, as well as species which may migrate or act as broodstock for other regions and islands; and
- Impacts to other cultural and subsistence practices

**4. Applicant should describe any limits or impacts to Native Hawaiians' ability to traverse or utilize the License Area in order to engage in traditional and customary practices, as well as feasible action to mitigate impacts to such practices.**

While much of OHA's concerns center around the applicant's use of a to-be-determined amount of public trust water, we also seek to understand how the Proposed Action may impact access to the License Area itself. Namely, we hope to understand how the applicant intends to

<sup>7</sup> HAR §§11-200-2, -12(a); see Applicant's EISPN, 3-19.

support any efforts by Native Hawaiians to travel through or otherwise utilize the License Area in the exercise of traditional and customary rights protected by Article XII, §7 of the Hawaii State Constitution.<sup>8</sup> OHA expects that the applicant has concrete plans and procedures in mind to ensure that Native Hawaiian rights to hunt, gather, and otherwise engage in traditional and customary practices are respected at all times, and that the EIS will examine alternatives that may mitigate any impacts to Native Hawaiian rights as part of the broadly defined socio-cultural "environment."

OHA further recommends that the applicant also explain what impacts will occur for the general public. Any restriction should be explained in terms of its purpose, with an appropriate analysis of less-impactful alternatives to achieving such a purpose.<sup>9</sup>

**5. Applicant should clearly articulate how its use of the license area and water is consistent with public trust purposes, especially in light of the impact of its diversions on Native Hawaiians and members of the public.**

While not an express requirement of Chapter 343, OHA reiterates the need for the applicant to support the assertion that any request for a thirty-year lease of public land for the purpose of diverting public trust water is consistent with the public trust. Absent such justification, any proposed action could be presumed contrary to the obligations of the State under its constitution and Water Code.<sup>10</sup> While it is not inconceivable that off-stream diversions, even by private entities, may in some cases be consistent with the public trust, such diversions and their end uses must be carefully justified and balanced with protected public trust purposes and other beneficial public uses. In other words, for the EIS to be a meaningful analysis of a realistic proposal, the Proposed Action must be legally justifiable as consistent with the public trust.

In this regard, OHA joins the U.S. Department of the Interior's Fish and Wildlife Service in noting that the Hawai'i State Water Code (HRS §174C) does not include agricultural diversions among those purposes necessarily considered consistent with public trust use. We add that HRS §174C-101 affirms that "the appurtenant water rights of kuleana and taro lands, along with those traditional and customary rights assured in this section, shall not be diminished or extinguished by a failure to apply for or to receive a permit under this chapter."<sup>11</sup> We further urge that the applicant demonstrate its understanding of what impacts continued diversion may have on the Native Hawaiian farmers, fishers, and other residents of East Maui.

**Conclusion**

From the earliest days to the present, fresh water has and continues to be a precious necessity to life in Hawai'i. In light of the generations that have passed since the continuous commercial dewatering of streams throughout East Maui, we approach the applicant's request

<sup>8</sup> Article XII, § 7: The State reaffirms and shall protect all rights, customarily and traditionally exercised for subsistence, cultural and religious purposes and possessed by ahupua'a tenants who are descendants of native Hawaiians who inhabited the Hawaiian Islands prior to 1778, subject to the right of the State to regulate such rights.  
<sup>9</sup> HAR § 11-200-16.  
<sup>10</sup> See, e.g., In re Water Use Permit Applications, 94 Haw. 97, 154-55 (2001).

<sup>11</sup> The chapter referenced in this section is the State's Water Code.

Mr. Ian Hirokawa  
April 4, 2017  
Page 7 of 7

for the continued diversion of East Maui stream water for an additional thirty years as a serious matter. OHA urges the applicant to continue to utilize the Chapter 343 process as an opportunity to sincerely consider how to propose an arrangement that meets the legal obligations of all parties as well as the interests of Native Hawaiians and the greater public, especially the people of Maui. OHA looks forward to reviewing the draft EIS.

Mahalo once again for the opportunity to comment. If you have any question, please contact Kai Markell at (808) 594-0220 or via email at kaim@oha.org.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū,  
and Huelo License Areas

Dear Ms. Hussey:

Thank you for the Office of Hawaiian Affairs' (OHA) participation in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your agency's written comments dated April 4, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action, including alternative lease terms.
3. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from

September 23, 2019

the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).

4. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I)
5. Cultural Surveys Hawai'i, Inc. prepared an Archaeological Literature Review and Field Inspection (See Appendix E) and Cultural Impact Assessment (See Appendix F) reports in support of the Draft EIS assessing the impacts of the Proposed Action to historic and cultural resources, as well as cultural practices. The analysis of the reports is discussed in Sections 4.5 and 4.6 of the Draft EIS.
6. The Proposed Action's relationship to various State of Hawai'i and County of Maui plans will be discussed in Chapter 5 of the Draft EIS.

OHA's written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

**Re:** Early Consultation for the Preparation of an EISP Proposed Lease for the Nahiku, Ke'anae, Honomanu, and Huelo License Areas East, Central and Up-Country Maui, Hawaii

Aloha Mr. Okamoto,

Mahalo for the opportunity to provide comments prior to the issuance of an Environmental Impact Statement Preparation Notice for the use of water from four license areas consisting of 33,000 acres of lands and waters in East Maui. I provide these comments as a restoration ecologist and conservation planner, with knowledge of the extensive ditch and diversion system of East Maui and the varying natural conditions of the streams and surrounding ecosystems there; and as a taro farmer.

My comments are preliminary in nature at this time. The proposed action involves the continued diversion of water from at least 31 streams (not inclusive of tributaries, springs and seeps) along the north-facing slopes of East Maui/Haleakala, covering the following license units: Nahiku, Keanae, Honomanu and Huelo for a total of more than 33,000 acres. This area represents critical source waters and watersheds that support native species, including numerous threatened and endangered terrestrial and aquatic plants, birds, fish, crustaceans, molluscs and insect species; riparian and nearshore fresh, brackish and marine water health; the health of coastal SMA areas such as the traditional Nahiku, Keanae-Wailuanui, Honopou and Huelo taro farming districts; as well as, Traditional Cultural Practice (TCPs) including gathering for food, medicine, weaving, kapa, cordage and hula mauka to makai, the tending of ancient sacred sites and the rehabilitation of traditional taro growing places.

Peak acreage in sugar and pineapple occurred in the 1940s with peak production in the late 1970s. Water extraction from East Maui has remained at 1940s levels, estimated at an average of 160-200mgd (system capacity has been estimated at roughly 400-440mgd), while acreage and production over the last five decades has sharply declined. Alexander & Baldwin is currently authorized to divert 80mgd and now seeks to obtain 150mgd water allocation with a 30-year lease from the Board of Land and Natural Resources to apply to 26,600 acres in Central Maui, as well as to maintain its current service to the County of Maui. The allocation of water to the County should be considered separately from the allocation to A&B in the EIS, as water has been determined to be a Public Trust resource and decisions for allocation rest with the BLNR, not Alexander & Baldwin.

In general, I support and reiterate the comments of the Native Hawaiian Legal Corp that the EIS should consider impacts to and along: (1) each diverted stream, (2) each individual license area, and (3) the entire 33,000 acres of license area, mauka to makai, along with the full disclosure of diversions, diversion conditions, maintenance roads and maps. The maps and EIS should make a distinction between taro farmer and resident diversions versus Alexander & Baldwin ditch system diversions. This is a surface water evaluation.

I would add to that and emphasize for A&B's Environmental Impact Statement the importance of evaluating the cumulative impacts of water diversion to East Maui based on the already 150 years of water diversion and the proposed 30 years, as a requisite for assessing cumulative impacts to:

- Aquifers and springs throughout the license area;
- Plant composition of native riparian habitat of each stream, particularly at the subsurface/tap root interface; and
- An assessment of the relationship/dispersal of strawberry guava (*Psidium cattleianum*), rose apple (*Syzygium jambos*) and black bamboo (*Phyllostachia nigra*) to ditches, maintenance practices and roads, and riparian areas in the 33,000 acre license area over the last 60 years, and projected encroachment into non-invaded areas of the units over the next 50 years under two scenarios - the ditches and roads remain open; and, if they are closed. I encourage the engagement of experts such as the Maui Invasive Species Committee in this analysis.

The EIS should also include:

- Declaration of the number acres for sugarcane and pineapple watered by the East Maui system from 1880 to 2016 and the average mgd change over that same period to provide a reference for review of the pending 150mgd application for 26,600 acres.
- A biological assessment of the instream aquatic fauna and riparian flora, including damselfishes, broken down by upper, mid- and lower reaches of each stream and tributary in the four proposed License Units of East Maui; and, a prioritization of each stream section by biological and ecological significance (see below; Alternatives).
- An assessment of feral ungulate populations in each unit broken down by upper, mid- and lower elevations, in relation to levels of *Leptospirosis*, *Escherichia coli* and *Staphylococcus* sp in stream bed and riparian area standing water and pig wallows (vis-à-vis correlation to stream flow or lack thereof).
- An assessment of the incidence of illnesses due to the above listed bacteria among taro farmers and residents of East Maui within the last 30 years.

The Alternatives section of the EIS should include an assessment of continued use of all 4 units, less than the 33,000 acres license area (3, 2, or 1 license units) and a no use/no diversion alternative. I concur with the details outlined by the NHLC regarding the analysis under each alternative, and add the following:

- As A&B/HCS is no longer in the business of sugar production, this analysis should also provide realistic and concrete, not speculative, water budgets for each proposed end use under each alternative for the 26,600 acres and separately for use by the County of Maui.
- The analysis of each license unit should also include a list of diversions on each stream/tributary that can be decommissioned and removed from the diversion system and restored to natural flows; and,
- A priority ranking of the most critical habitats for native aquatic flora and fauna by stream, tributary and stream section (in relation to ditches at various elevations) that would benefit from diversion and/or ditch removal within the license area.
- A priority ranking of streams and areas within each license unit for TCP use, historic sites and traditional taro-farming terraces and lands that would benefit from diversion and/or ditch removal within the license area.

I look forward to the publication of the EISP. Should you have any questions regarding the above, you may contact me at [REDACTED]

Sincerely,

Penny Levin

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Penny Levin:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 9, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. A description of the EMI Aqueduct System, its operation, and maps are included within the Draft EIS (refer to Sections 2.2.1, 2.1.2, and 2.1.5). The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area.
3. For purposes of this Draft EIS, the list of streams assessed as part of the License Area is taken from the D&O.
4. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.
5. The Draft EIS will include in Chapter 4 an assessment of existing conditions and the impacts of the Proposed Action and modification or removal of diversion structures in streams designated for full restoration by the D&O, including a summary of secondary and cumulative impacts in Section 4.19.

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

6. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the Draft EIS (See Appendix A and Appendix C).

7. Cultural Surveys Hawai'i, Inc conducted a Cultural Impact Assessment in support of the Draft EIS assessing the impacts of the Proposed Action on cultural resources and traditional practices. Cultural resources and practices are discussed in Section 4.6 of the Draft EIS. Agricultural impacts are also discussed in the Agricultural and Related Economic Impacts report (See Appendix J).

8. Hydrology conditions and potential impacts are discussed in Section 4.2 of the Draft EIS and the Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A) and Assessment of Streams and the Ocean Water Chemistry (See Appendix B).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Vice President, Director of Planning

Subject: EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Wilson Okamoto Corporation,

In addition to what has been written by the East Maui Streams coalition's Call to Action ... I'd just like to say that A&B's continued access of Maui's water is a "disgrace" beyond belief. Too, that Maui's new dishonestly-contrived council aided and abetted by a Mayor (who doesn't believe rocks are sacred) and his hired gun corporation counsel are so deep in complicity with the spec-marketed exploitation (read "rape") of Maui demonstrated by their participation in the back-door January 2nd "Council Overthrow" akin to the 1893 takeover of HI - the lot of them should remove themselves from office! Additionally, Maui's planning department needs to take a deep look in the mirror itself!

Alas, not only has HC&S ceased growing sugar cane thus not needing the water, Iao River has been "raped" at the hands of a mind-boggling array of bulldozers, etc. that spent months re-routing the river back to the diversion grates. Word has it A&B is being "bought" by a mainland "devolve-ment" company. Is that correct? If so, what is all this greedy water-grabbing all about? To feed the "devolve-ment" plans of the new company?

A&B is a disgrace to Maui and has been since 1893 along w/its cohorts. INDEED, anyone working for A&B to the least paid clerk is complicit in the events that occurred 220 years ago! The entire operation needs to be shut down with its entire land holdings turned into a community trust that supports local organic agriculture and affordable homes. FOR INDEED, that is the only way it might clean up a measure of its so nasty karma here!

As for the water lease - it's a no-brainer! It should never happen, and to have to pay a consulting company gobs of money to make that decision signals a very distorted, dishonest county administration that lacks courage to do the right thing out the gate. Sadly, it seems it to know "squat" about true sustainability or commitment to aloha, ohana and pono w/re to this community.

**Subject:** EISPN: Proposed Lease (Water Lease) for Nahiku, Ke'anae, Honomanu and Huelo License Areas

Dear Wilson Okamoto Corporation  
Attention: Mr. Earl Matsukawa

A&B or any related corporation or other business entities (such as a co-op or a business in partnership) SHOULD NOT BE ALLOWED TO LEASE WATER Until the residents of the license areas (Nahiku, Ke'anae, Honomanu and Huelo) Are fully provided for in their needs for water.

These residents are not being sufficiently provided for NOW and they have not been for years that A&B or other related business entities linked to A&B (which have been used to make short term leases adding up to a long term lease) have been obtaining the water using subversive business tactics.

YOU MUST STOP ALL LEASING ACTIVITIES

until the people of this land are compensated and provided for in reimbursement for the incredible detriment that A&B and related entities have caused upon this land for decades.

Furthermore, this EISPN should not be conducted by a corporation that is HIRED BY the corporation that wishes to obtain a lease!!!

This is a conflict of interest and it can impact the EISPN process in favor of the corporation. This is not the right way to do this.

THIS IS NOT PONO.

AND NOW IT WILL STOP.

THIS IS THE TIME FOR ALL THIS KIND OF ACTIVITY TO STOP.

The Wilson Okamoto Corporation  
MUST SUPPORT THE COMMUNITY OF MAUI  
by stopping the leasing process NOW.

And I will tell you on behalf of all the ancestors that have lived upon this land, that if Wilson Okamoto Corporation does NOT do what is PONO, Wilson Okamoto Corporation will fail to exist upon these islands.  
It is the only way for spiritual justice now.

Please do what is right, Pono

And all of us will be safe and provided for.  
All of us will have the prosperity that we seek.  
Water is Life & should not be taken over.

Mahalo,  
Ricardo Padilla

September 23, 2019

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Padilla:

Thank you for participating in the scoping process for the subject Environmental Impact Statement pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 10, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

4. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

5. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended to the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSEEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

Environmental Impact Statement Preparation Notice  
Proposed Water Lease for the Nāhiku, Keʻānae, Honomanū, and Huelo License Areas  
Scoping Meeting Comments of

Ms. Rose Reilly  
February 23, 2017  
Haʻikū Park and Community Center  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MS. REILLY: I would just like to say that I see that the streams reaching the ocean with all of the fish that are produced as fundamentally important to the survival of the people, and that for as far as Hawaiians are concerned and as far as everyone's concerned, we are here in Hawaii because of Hawaiians. The way that they made this place is what has made it so special and that everybody wants to be here because of it. And that they're here, they all are, with their lands and their water management, and like the system is set up to manage this.

The environmental impact is in their history, and they know the whole thing, and they're the ones that should be saying like, you know, restore the forests. Like that's all these different levels of having -- you have the groundwater, the middle, the upper. You know, like the animals. This system that is being imposed, this colonial system is killing all of us. Please do not be a part of that.

Ms. Rose Reilly

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Keʻānae, Honomanū  
and Huelo License Areas

Dear Ms. Reilly:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Keʻānae, Honomanū, and Huelo License Areas and your oral comments at the February 23, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawaiʻi Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Keʻānae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. Cultural Surveys Hawaiʻi, Inc. prepared a Literature Review and Field Inspection report of the License Area (Appendix E) as well as a Cultural Impact Assessment (Appendix F) in support of the Draft EIS. These studies are discussed in the Draft EIS in Section 4.5 Historical and Archaeological Resources and Section 4.6 Cultural Resources.
3. Sea Engineering, Inc. and Marine Research Consultants, Inc. prepared an assessment of streams and the ocean water chemistry in support of the Draft EIS. The Draft EIS summarizes this assessment in Section 4.2.3. The report is also appended in the Draft EIS (Appendix B).
4. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action and alternatives on indigenous freshwater species, and terrestrial flora and

10238-02  
Letter to Ms. Rose Reilly  
Page 2  
September 23, 2019

fauna, respectively. The Draft EIS discusses the impacts of the Proposed Action to freshwater species in Section 4.2.1 and impacts to terrestrial flora and fauna in Sections 4.4.1 and 4.4.2. Both reports are appended to the Draft EIS (See Appendix A and Appendix C).

5. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended to the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your oral comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

**Subject:** EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Wilson Okamoto Corporation,

I am writing on behalf of Kipahulu Ohana, Inc. a nonprofit Hawaiian organization that operates Kipahulu Living Farm, a traditional wetland taro farm, in partnership with Haleakala National Park since 1995.

As East Maui taro farmers, Kipahulu Ohana strongly believes that the Environmental Impact Statement concerning A&B's proposed 30 year Water Lease for East Maui streams in the Ko'olau moku should be done by a consultant chosen and paid by DLNR, rather than by A&B. This is the only way that a fair, complete and legitimate EIS can be created.

Regardless of who completes this EIS, it needs to provide a complete analysis of past, present, and potential future environmental impacts from stream diversions, including effects on Native Hawaiian cultural practices, aquatic stream life, and nearshore fisheries and ecosystems, exploring multiple alternatives to the proposed 30 year lease.

A&B has a long history of abusing its position, delaying in every possible way any accountability for the impacts and costs of its diversions, and appearing to be motivated solely by its own interest and profit. The long-overdue EIS to consider these true impacts and costs must be done in a way that is impartial or it will have no credibility as actually addressing the real issues and alternatives.

Mahalo for your consideration of our comments.

Sincerely,

Scott Crawford

Executive Director  
Kipahulu Ohana, Inc.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Crawford:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 6, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

10238-02  
Letter to Mr. Scott Crawford  
Page 2  
September 23, 2019

reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the DLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.

3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.
4. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended to the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).
5. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the Draft EIS (See Appendix A and Appendix C).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Mr. Sean Lester

February 23, 2017

Ha'ikū Park and Community Center

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. LESTER: Aloha. My name is Sean Lester. And I do have a little to read. I live in an area directly affected by the EMI's water system and the water request being made before this body of A & B, because this actually is by A & B. The accountability for water resources has been at the core of all water disputes and requests before this commission and the State of Hawaii since the formation of the State constitution. The requests before you today is no different in this regard. Several years ago, HC&S was receiving over 90 billion gallons of water while paying less than \$150,000 a year for the resource. They were, as A & B is now, requesting a 30-year lease. I applaud the wisdom of this commission, because a few years later, the direction of HC&S Corporation changed dramatically when it was liquidated.

Forward-looking local residents questioned this commission as to the validity of the 30-year lease request back then, and the commission kept the annual lease structure. Forward-looking citizens are once again questioning the validity of a 30-year lease here before you today. Any corporation can be merged or liquidated, even the corporation who is now before you asking for a 30-year lease. How prudent is it to give such a long-term lease to a corporation that may not be structured as the same company in a few years, much less 30 years. Maui gave tremendous support for many decades to HC&S as a large local employer and supporter of our local economy. Yet with the final decision in the A & B boardroom, these jobs in the HC&S Corporation itself were extinguished.

We, as citizens, need a place besides a boardroom where our future is decided. It is in places like this commission where we, the people, can ask for assurance that thoughtful and balanced approaches to land and the water use will be employed. As in this case, this is the legacy that can balance the corporate model with short-term profit and factor long-term local needs into the equation. Whether people liked it or not, HC&S did try to keep this land in agriculture. We could count on the acreage farm to be consistent, as was their water request. It was on this basis that this commission allowed HC&S to keep using these water contracts year after year.

So the question is: Do we acquiesce and give A & B a new long-term water subsidy to the tune of 41 billion gallons of water rights a year for hypothetical crops and unknown uses? You must ask: Is the water use efficiency of their hypothetical diversified agriculture, or what is it? Are they going to sell even more land designated as agriculture, as they did the 339 acres in Paia, to a mainland business, with no local review or thoughts as to the impact of the local water needs?

When A & B sells agricultural land, do they sell the rights to the water -- that they're asking you for now -- with the land sale? Did they bank it as a commodity? What are their use plans that are shown in this water efficiency and their support of local food sufficiency needs?

So many unanswered questions. Why? Because, frankly, if you take the time to ask them, they don't know. The parent company of HC&S needs about 150 million gallons a day for diversified ag use. This request is based on, at best, a speculative projection with no basis in real fact. Actually, what they're asking for is simply a request to get water rights, justified by the fact that they're a large land owner, hoping you will trust them to have the foresight to know how to utilize the water correctly as they did when they were a 140-year-plus monocrop agribusiness. This logic no longer applies as it's an entirely new ballgame. The logical game plan is what you have here on the table before you.

As you probably are aware, the continually shifting landscape of A & B's map and its parcels, and which are listed as ag, were sold, is far too tenuous to substantiate a blanket long-term water lease. So many questions are obscured and hidden behind A & B's corporate structure.

I'll skip on.

A bit of an overview here. A & B is a huge local land owner owned by out-of-state entities. A & B's major shareholders own 81.65 percent of the stock. We're talking from the mainland and from Europe, according to the Morningstar investment website. I will place the list of these investors in my written testimony. But you hear the names of these people that we know as A & B, you see T. Rowe Price, Vanguard, Touchstone Capital. What stands out here is there's not a single Hawaii-based institution or fund listed as an A & B major stockholder. Not one here. This is an out-of-state corporation. Understand that. Please take the time to look at each of these major investors as I have. These companies have one purpose: To ensure the largest possible return on a diversified portfolio of investments.

So let's be real when we talk about this lease request. It isn't about keeping diversified agriculture. A & B does not have the same need we do for this resource to be wisely allocated. We also, we who live here, are looking at a multigenerational survival. A & B's major shareholders are looking at a quarterly report that steers decisions on how many shares to buy and sell. We must weigh this part of the equation when making decisions of this magnitude. This company has two potential avenues of land use here on Maui. One is to sell and build out as much of this land as possible to keep their stratospheric 180 rating -- and if you look that up on online, they're higher than Microsoft was when they were at their zenith. The land banked for many years in future real estate sales. This would include leases or sales to a few large agri businesses and a thin covering of local farmers, et cetera, to placate, as they have for well over a hundred years placated by handing out a few dollars here and a few dollars there. Those days are over, those days are over.

The second possibility is to work with a very different model. Become partners with the County of Maui and other private or nonprofit organizations to move to a truly long-term profitable, sustainable, agricultural model that will ultimately be profitable in more than just the normal short-term corporate structure. This would lead to the wise use of water resources and engage community support of a future with long-term, locally aligned values and goals.

Please understand that the areas where this water is taken from on the East Side, Nahiku, Keanae, Huelo, have paid the price over the years for HC&S's use of this resource. An entire way of life was disrupted and destroyed, remaining so to this day. So in my opinion, there is no right to this water by A & B as a corporation. They were paid by many generations of local Hawaiian and other communities for every dollar of profit they have received, at extraordinarily heavy and profound costs to these communities. There is nothing owed to this company regarding water rights. At the same time, everything is owed to these West-side communities. We must reinstate their water rights ahead of any ruling on A & B's request. This could be done immediately on request. To put things in perspective, in order to receive ag-rate water as a small farmer here on Maui, we have to show on an annual basis of the stable farm plan, implement this plan, and be inspected to ensure it's being applied directly every single year. We had a plan inspection done annually to show that it was indeed an agricultural property. A & B is primarily a real estate and transportation company when sugar was taken out of the equation. They're entering an entirely new area of land use. Why should they not be held at least to the same level of accountability as other ag here on Maui?

And if you look at Keanae or Nahiku, there simply isn't any water, as you have -- as the commission has held up the disbursement of even small amounts of water that was fought for so hard by locals before the State. We cannot afford the old-style dog-and-pony show that allows entities like A & B to demand such water rights or play the game where they're the only guy at the table with the \$10,000 chip. Those previous models simply can't be used anymore. Hopefully, experience will be the guide to a new paradigm of water and land use in Hawaii. Today it's even more pressing that we have a real ag water utilization plan, one that is truly proven with substantive penalties if not met and a real review on an annual basis for water use. This is one of the agencies that can assure Maui of water use and land utilization that's a cornerstone for these precious lands. And we can't have a FONSI here where it's like there's no impact.

Anyway, that's mine. Thank you, folks.

Mr. Sean Lester

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Lester:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and your oral comments at the February 23, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued *"right, privilege, and authority to enter and go upon"* the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the *"purpose of developing, diverting, transporting, and using government owned waters"* through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. Section 1.3.4 of the Draft EIS discusses the Commission on Water Resources Management's (CWRM) Interim Instream Flow Standard (IIFS) Decision and Order (D&O) and the authority of the BLNR to issue a Water Lease for non-instream uses pursuant to Hawai'i Revised Statutes § 171-58, that is subject to the IIFS set by CWRM.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action, including alternative lease duration.
4. Section 2.1.4 of the Draft EIS includes a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on water available of which diversion quantities from the D&O were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area

Ms. Sesame Shim

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū  
and Huelo License Areas

Dear Ms. Shim:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas and your oral comments at the February 22, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawaiʻi Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui. The environmental impacts of the potential Water Lease will be assessed.

1. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
2. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure

Scoping Meeting Comments of

Ms. Sesame Shim

February 22, 2017

Maui Electric Company Community Meeting Room

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MS. SHIM: And pretty much the current state of EMI is take all and use all, that is not a resource management. And it has been this way since the ditches were (inaudible). Resource management is so alien to A&B and there's so much water being wasted and unaccounted for, we are truly starting from square one. There's so much to account for to consider and it affects all the people of East Maui. We shouldn't be giving all the power to EMI to determine what happens to all this water. This is a public resource and A&B is a private entity.

There needs to be more transparency and involvement from the Native Hawaiian community, especially the community that lives there. The Native Hawaiian community were there maintaining a communal relationship with the water prior to these ditches. Their lives and future generations have and continue to be affected by the actions of a private entity to control the water. The water usage from A&B is the last priority to any water usage. If there is not enough after meeting all the kalo farmers needs, the environmental needs, the current community needs, they should get none. The lands currently used for sugarcane was never intended to use so much water. Cultivation farming should return to where it is naturally intended to be.

FACILITATOR SENELLY: Sesame, I must ask you, what do you want to see the EIS address about that? How do you want that, what you just say, how do you want --

MS. SHIM: To prioritize.

(HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I)

Respond

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Rospond:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated February 23, 2017, and March 10, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Fact, & Decision

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

10238-02  
Letter to Ms. Shari Rospond  
Page 2  
September 23, 2019

and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).

4. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.
5. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the Draft EIS (See Appendix A and Appendix C).
6. For the purposes of this EIS, diversion quantities from the D&O were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area.
7. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

**Scoping Meeting Comments of**

Ms. Adriane Raff Corwin

February 22, 2017

Maui Electric Company Community Meeting Room

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MS. RAFF CORWIN: My name is Adriane Raff Corwin. I'm with Sierra Club Maui Group. We will also be submitting written comments, but I'll just provide a little bit of what we want to say here. I'd like to say I agree with Albert Perez's comments that spoke earlier.

One of the main things we want to bring up is that the community has been asking for this EIS for decades and we know that that's not your fault as the consulting company that this hasn't been done, but just that there's a lot in here to address. Because the EIS should have been done so long ago, we don't have a track record, an official record of the environmental impacts that have already happened and so we need an accounting of that as to the damage that has been done by the previous diversions over all these years and so we would like to have that history and that understanding in this document.

Another thing is that, as Albert mentioned, that there's a lot of things that are in the preparation notice that claims that there aren't environmental impacts, but I would like to just draw attention and lot of our comments will come from at the end of the preparation notice -- and I recommend everyone look at this -- the United States Department of Interior's Fish and Wildlife Service submitted comments on this preparation notice that has many, many, many excellent points as to things that this EIS needs to address, one of them being currently A&B is only taking 25 million gallons per day from the diversions when, in fact, they could take up four hundred something and in the past they took about 170 per day, 170 million gallons per day during sugarcane growth. So they're only taking 25 right now and we are seeing many of the streams come back and the wildlife in those streams. And we need to have an understanding of if we -- if they start taking more than just 25 and those streams start disappearing again, that's a major environmental impact because we've gotten some restoration and we -- so we need that addressed.

There's a lot of other great points and, again, I recommend everyone read this document that's at the end of the preparation notice including, yes, different --

FACILITATOR SENELLY: You mean the letters?

MS. RAFF CORWIN: Yes, the letters. So the letter from U.S. Department of the Interior, Fish and Wildlife Service.

Different lengths of the lease is another thing we'd love you to address. There's a lot in here, but, yeah, I would say, again, my major points, because I know everyone else needs to speak, is we need to have a

full understanding, a true full environmental impact statement with primary, secondary, tertiary, etc., impacts, cultural impacts, environmental impact, social impacts, and the current preparation notice as written is not addressing much. It is skirting over the majority of these issues and so we would like you to completely readress this and look at what your preparation notice is missing on these factors.

FACILITATOR SENELLY: Okay. Just a couple of clarifications.

MS. RAFF CORWIN: Sure.

FACILITATOR SENELLY: The prep notice really cannot come to conclusions about significance.

MS. RAFF CORWIN: Oh, I don't mean -- I don't mean conclusions, but there's many things in the preparation notice that it looks like you're not even going to address because you claim there's no significance.

FACILITATOR SENELLY: Oh, that's why we're here.

MS. RAFF CORWIN: Right. So that's what we're saying, we want to make sure that doesn't happen.

FACILITATOR SENELLY: Yeah. And my only point is that the level or whatever of significance has not been determined because the studies have -- are not being -- have not been done. So I take -- I get your point, though, you want it -- you want it -- I think the gentleman here says you want it to be transparent and put a lot of stuff in.

MS. RAFF CORWIN: Well, for time reasons, I will leave it at that, but it's a lot more complicated than that.

**From:** [Adriane Raff-Corwin](mailto:Adriane.Raff-Corwin@sierraclub.org)

**Subject:** Comments on EISPN for Proposed Lease for Nāhiku, Kēānāe, Honomanū, and Huelo license areas  
**Date:** Friday, March 10, 2017 11:15:49 PM  
**Attachments:** [2017SCM5CommentsLetterforABEISPN-2.pdf](#)

Aloha,

Please find attached comments on the EISPN for the proposed Water Lease in East Maui from Sierra Club Maui Group. In addition to those contacts listed in the OEQC, I am also sending this to the DLNR because some of our comments are directed to that agency.

Mahalo,  
Adriane Raff Corwin

**RE:** Comments on: EISPN for Proposed lease (Water Lease) for the Nāhiku, Kēānāe, Honomanū, and Huelo License Areas

Aloha kākou,

Thank you for the opportunity to provide comments on the Environmental Impact Statement Preparation Notice (EISPN) for Alexander & Baldwin's proposed 30-year Water lease. We have many members who live in the license areas, including in areas that are not part of the Interim In-stream Flow Standard (IIFS) contested case petition, and we want to ensure that the DEIS takes into account their stream flow needs.

To begin with, many Maui stakeholders are apprehensive of the way this EIS process is unfolding because Alexander & Baldwin (A&B) is paying for and directing the work of the consultant. In making this comment, we are not insinuating anything against the Wilson Okamoto Corporation; our concern is with the process. **Before the DEIS goes any further, we ask that the DLNR take control of the process by directly hiring and paying for a consultant.** This will remedy the following:

- Our members are greatly concerned that having Alexander & Baldwin in charge of the process diminishes the chances a thorough DEIS will be written because A&B has a vested interest in a specific outcome. Because of the decades of legal battles between A&B and impacted community

PO Box 79180, Pā'ia, Hawai'i 96779 | 808-419-5143 | [adriane.raff-corwin@sierraclub.org](mailto:adriane.raff-corwin@sierraclub.org) | [maui.sierraclub.org](http://maui.sierraclub.org)  
Emailed correspondence reduces paper waste. If you do print this letter, please recycle. Mahalo.

members, the community will not see an EIS commissioned by A&B as legitimate. By taking it out of the hands of A&B, the DLNR will alleviate these concerns and help instill trust in the governmental process.

- The FEIS, if approved by the BNLNR, will need to go through a public auction process, which A&B may not win. An EIS commissioned by A&B appears designed to tip the process in its favor, whereas an EIS that is commissioned by a neutral party is more likely to weigh the many potential alternatives to A&B's proposed 30-year lease and will enable more parties to make viable bids in a public auction.

**For these reasons, we ask that DLNR take direct control of this process as soon as possible and commission a new EISPN.**

With that said, we have reviewed the current EISPN document submitted by Wilson Okamoto Corporation and have the following comments:

1) **We endorse the comments provided by the U.S. Fish and Wildlife Service**, which include:

- a) **Alternative Lease Durations:** The EIS should analyze the costs and benefits of many alternatives to the proposed 30-year lease, including shorter scenarios (5, 10, 15 years) and should take into account how the climate and rainfall patterns may change in these time periods, resulting in different impacts. We agree with the recommendation that a shorter lease, such as 5 years in length, is better because environmental changes may be more drastic in 10, 15, and 30 year intervals.
- b) **Alternative Water Amounts to be Diverted:** As of October 2016, A&B reported that it was only diverting 25 mgd from East Maui streams yet is requesting up to 100 mgd in its lease. The EIS should analyze how different diversion volumes (such as 25, 50, 80, 100) would impact the birds, plants, and aquatic life whose direct habitats are affected. It is especially important to analyze how the diversion structures "may represent barriers to upstream or downstream faunal passage of native Hawaiian fishes and other migratory stream biota."
- c) **Maintenance of the Diversion System:** The EIS must analyze the amount of water lost through seepage and how these losses can be mitigated so the diversion system is more efficient and ensures a maximum amount of water remains in the streams.
- d) **Actual Uses of the Diverted Water:** Because these waters are a natural resource and

2

therefore defined as a public trust, the EIS should analyze what is legally allowed for the leaseholder to do with the diverted water. As the USFWS notes, "public trust uses such as minimum instream flows for ecological integrity and traditional cultural practices must be fully addressed before off-stream allocations can be granted...[and] agricultural diversions are not considered a public trust use."

- e) **Alternatives to Stream Water:** The EIS should analyze whether other water sources, such as existing pumped wells, provide enough water to meet A&B's immediate water needs for agriculture and its obligations to the county to provide water to Upcountry Maui residents.

2) **Regarding Section 1.4:** Section 1.4 states that, "Settlements along Hāna Highway from west to east, toward Hāna, include Huelo and Kailua makai of the Huelo License Area, Ke'anae and Wailua makai of the Ke'anae License Area and Nāhiku makai of the Nāhiku License Area." This description should add the communities of Honopou, Hanawana Hoolawa to the Huelo Lease area. These communities have no public water systems and the DEIS needs to specifically discuss mitigation plans to restore sufficient flows to Puniawa, Ho'olawa, Mokupapa, Honokala, Waipio, East Waipio, Waipio iki, and Hanawana streams to provide domestic water to hundreds of families who live in these communities. Their streams are not part of the 2001 IIFS petition for the East Maui Lease areas, yet the continued diverted conditions of their streams impact their daily lives and their rights to have sufficient water for their domestic needs.

3) **Regarding Section 2:** Section 2 states, "The Draft EIS, in addition to the No Action alternative, however, will identify alternative(s) that contemplate a lease that permits less than the IIFS-enabled diversions, and will evaluate environmental impacts, benefits, costs, and risks of such alternative(s)." One of the alternatives that the DEIS should consider is the restoration of stream flows to communities with no public water supply in the Huelo license area, who are not part of the East Maui IIFS contested case petition.

4) **Regarding Section 3.5.4:** There are impacts in areas where no restoration is being proposed like Hanawana and Kailua areas, Waipio and Waipio iki, Hoolawa, Honokala, Makapipi and Mokupapa.

5) **Regarding Section 3.10.4:** Recreational use of many streams in the lease area, especially in local neighborhoods such as Hanawana, Hoolawa, Mokupapa, Honokala, Honopou and Huelo, is already significantly impacted under the former lease conditions. The proposed diversions will continue

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū,  
and Huelo License Areas

Dear Ms. Raff Corwin:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas, for your letter dated March 9, 2017, and your oral comments at the February 22, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action which are being studied. In accordance with

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

those impacts and should be discussed.

- 6) **Regarding Section 3.11.3 Potable Water System:** Community water systems for Huelo, Honopou, Hoolawa, Waipio resident are in the lease area. What happens there affects many potable water users and that should be discussed in the DEIS.

7) **In addition, the DEIS should:**

- Analyze how the water diversions impact the whole ecosystem from mauka to makai, and how these impacts may affect the larger ecosystem of Maui and Hawai'i Nei;
- Provide a complete assessment of the damage already done to the ecosystem and cultural practices from the stream diversions and how these already existing negative impacts can be remedied;
- Analyze all possible secondary and tertiary impacts of the diversion system, such as those on Native Hawaiian cultural practices and traditional food gatherers;
- Provide an economic analysis of the financial value of the water to be sourced from this lease.

Mahalo again for this opportunity to provide comments on this EISPN.

Aloha,

Adriane Raff Corwin  
Coordinator, Sierra Club Maui Group

Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.

3. The Draft EIS includes in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action, including a discussion of alternative lease terms and duration. Section 3.1.1 of the Draft EIS discusses water source alternatives.
4. For purposes of this Draft EIS, the list of streams assessed as part of the License Area is taken from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). The D&O as it applies to the streams in the License Area is explained in Section 1.3.4 of the Draft EIS.
5. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the D&O were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action and alternatives on indigenous freshwater species, and terrestrial flora and fauna, respectively. The Draft EIS discusses the impacts of the Proposed Action to freshwater species in Section 4.2.1 and impacts to terrestrial flora and fauna in Sections 4.4.1 and 4.4.2. Both reports are appended to the Draft EIS (See Appendix A and Appendix C).

7. Impacts of the Proposed Action on groundwater, including system losses over the Kahului and Pā'ia aquifers are discussed in Section 4.2.2 of the Draft EIS.

8. Section 1.3.4 of the Draft EIS discusses the CWR D&O and the authority of the BLNR to issue a Water Lease for non-instream uses pursuant to HRS § 171-58, that is subject to the IIFS set by CWRM.

9. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Steam Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See

Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

10. Direct, secondary and Cumulative Impacts of the Proposed Action are discussed in Section 4.16 of the Draft EIS.

11. Munekiyo & Hiraga Inc. prepared an Economic and Fiscal Impact Study (Appendix H) and Plaseh Econ Pacific Inc. prepared an Agricultural and Related Economic Impacts study (Appendix I) in support of the Draft EIS. These studies are discussed in the Draft EIS in Sections 4.7.3 and 4.7.4, respectively.

Your written and oral comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū  
and Huelo License Areas

Dear Ms. Kitkowski:

Thank you for your agency's participation in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas. You provided an early consultation letter dated December 23, 2016, which was prior to the publication of the EISP on February 8, 2017, and you also provided written comments dated February 23 and March 22, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix J (as to the early consultation comments) and Appendix M (as to your comments on the EISP).

We acknowledge that the Department of Health, Maui District Health Office, in early consultation did not have comments but recommended that the applicant review the Standard Comments on the Department of Health's former Environmental Planning Office's (EPO) website. The EPO submitted early consultation comments, a copy of which is included in Appendix J to the Draft EIS.

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Dear Ms. Case:

SUBJECT: Environmental Impact Statement Preparation Notice Comment: Proposed Water Lease  
to Alexander and Baldwin, and East Maui Irrigation (EMI) Company (collectively, A&B),  
for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas

Having reviewed the subject document, the Office of Environmental Quality Control submits the following comments for your consideration in the preparation of a draft EIS.

**CLIMATE CHANGE:** Section 3.1 of the EISP notes that the Proposed Action is limited to the issuance of the Water Lease for the subject License Area, which would enable A&B to continue operation of the EMI Aqueduct System that has been in operation for over a century. The document notes that the proposed action will have no significant impacts on temperatures, winds, or rainfall levels in the region. The Office requests that the document expand discussions on climate change impacts (global warming, greenhouse gas increases, etc.) on the various elements of the environmental setting for the proposed action especially during the proposed lease-life. This would include potential direct, indirect and cumulative climate change impacts related to rainfall, ground water and surface water, flora, fauna, severe weather conditions, flooding, historic and archaeological resources, cultural resources, socio-economic impacts, and traffic impacts.

Thank you for the opportunity to comment. Please contact Mr. Leslie Segundo if there are any questions regarding this letter.

Sincerely,

Scott Glenn, Director

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Director Glenn:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 3, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued *"right, privilege, and authority to enter and go upon"* the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the *"purpose of developing, diverting, transporting, and using government owned waters"* through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. The Draft EIS assesses climate change in Section 4.3.1 and the Assessment of Streams and the Ocean Water Chemistry report (See Appendix B).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Kēʻanae, Honomanū  
and Huelo License Areas

Dear Mr. Wong:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Kēʻanae, Honomanū, and Huelo License Areas. You provided an early consultation comment letter dated December 5, 2016, prior to the publication of the EISP on February 8, 2017, and also provided written comments on the EISP dated February 17, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawaii Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix J (as to the early consultation letter) and Appendix M (as to your EISP comments).

Your early consultation comments have been incorporated in to the Draft EIS as relevant to the Proposed Action. As suggested by your early consultation comments, the Proposed Action will implement appropriate BMFs which is discussed in Chapter 4 of the Draft EIS. As discussed in Chapter 4 of the Draft EIS, the Proposed Action will comply with the relevant regulations related to Water Quality Standards, HAR Chapter 11-54, and Water Pollution Control, HAR Chapter 11-55.

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

Ref. No. P-15508

March 2, 2017

**RECEIVED**  
**MAR 06 2017**  
**WILSON OKAMOTO CORPORATION**

Mr. Earl Matsukawa, AICP  
Project Manager  
Wilson Okamoto Corporation  
1907 S. Beretania Street, Suite 400  
Honolulu, Hawaii 96826

Dear Mr. Matsukawa:

Subject: Environmental Impact Statement Preparation Notice (EISP/N) Proposed Lease for the Nāhiku, Keānā, Honomanu and Huelo License Areas  
Tax Map Keys: (2) 1-2-004-005, 007; (2) 1-1-002-002; (2) 1-1-001-44, 050; and, (2) 2-9-014-001, 005, 011, 012, 017

Thank you for the opportunity to provide comments on the EISP/N on the proposed water lease for the license areas of Nāhiku, Keānā, Honomanu, and Huelo on the Island of Maui. The EISP/N review material was transmitted to our office via letter dated February 8, 2017.

It is our understanding that Alexander and Baldwin, Inc. (A&B) is preparing a Draft Environmental Impact Statement (DEIS) on the issuance of a long-term 30-year water lease involving these license areas from the Board of Land and Natural Resources. The water lease (proposed action) will require the lessee to use lands owned by the State of Hawaii to maintain and repair existing access roads and trails used as part of the East Maui Irrigation (EMI) Company aqueduct system.

The objectives of the proposed action are to preserve and maintain the EMI Aqueduct System, to meet the domestic water demands in Upcountry Maui, to provide water for agricultural purposes in Central Maui, and to serve community water demands in Nāhiku, Maui

The Office of Planning (OP) has reviewed the transmitted material and has the following comments to offer:

1. The EISP/N acknowledges a number of our comments made in a previous early consultation letter dated December 8, 2017 (Reference Number P-15388).

a) Section 4.1, page 4-1 states that the DEIS will need to demonstrate the proposed action's adherence to the goals and objectives of the Hawaii Coastal Zone Management program as listed in Hawaii Revised Statutes (HRS) § 205A-2.

Mr. Earl Matsukawa, AICP  
Project Manager  
Wilson Okamoto Corporation  
March 2, 2017  
Page 2

b) Section 4.1, page 4-1 affirms that the DEIS will need to address the proposed action's consistency with the objectives, policies, priority guidelines of the Hawaii State Planning Act, HRS Chapter 226, and Part II State Functional Plans.

2. The following issues are related to plans, policies, and initiatives that fall under the jurisdiction of OP:

a) Section 3.2.2, page 3-2 lists the environmental impacts related to soils that will be covered in the DEIS. It states that the proposed action is limited to the issuance of the Water Lease for the subject License Area, which would enable the lessee to continue operation of the EMI Aqueduct System. Anticipated impacts will be identified and discussed in the DEIS.

The DEIS should examine the proposed action's impact on the nearshore environment from loose soil, erosion, and ocean turbidity. This analysis should include mitigative strategies and proposed land controls to keep soil in place and prevent it from harming marine life, coral reefs, and impacting water quality within the nearshore ecosystem.

b) Section 3.3.1, page 3-4 asserts that environmental impacts related to hydrology and surface water resources will also be covered in the DEIS. This section also states that the proposed action is limited to the issuance of the Water Lease for the subject License Area, and anticipated impacts will be identified and discussed in the DEIS.

The DEIS should consider the proposed action's impact on surface water resources in terms of water quality and polluted runoff reduction strategies. Stormwater runoff, and the pollution it carries, can have a devastating effect on inland hydrological resources, as well as down range coastal areas. The DEIS should provide analysis on planned mitigative designs and source controls measures to safeguard water resources.

c) Section 4.2, page 4-2 of the EISP/N that the project may be subject to a Section 404 Clean Water Act and Section 10 Rivers and Harbors Act Permit from the U.S. Army Corps of Engineers. This federal permit may also require a Federal Consistency review.

The national Coastal Zone Management Act (CZMA) requires that federal actions be consistent with approved state coastal programs enforceable policies. A

002543

Mr. Earl Matsukawa, AICP  
Project Manager  
Wilson Okamoto Corporation  
March 2, 2017  
Page 3

Federal action is defined by the CZMA to include federal permits or approvals.

OP is the lead state agency with the authority to conduct Federal Consistency reviews. If a federal permit is required, please contact our office on the policies and procedures involved in a Federal Consistency Review.

- d) The DEIS should address the impacts to agriculture from the proposed action. The license area appears to be within the State Conservation District and does not involve land within the State Land Use Agricultural District. However, the proposed action may impact domestic water use and agricultural production potential on Central Maui lands. The DEIS should include an examination on the impact of the water lease to agricultural land use on the Island of Maui.

We have no further comments at this time. If you have any questions regarding this comment letter, please contact Joshua Hekeia of our office at (808) 587-2845.

Sincerely,

Leo R. Asuncion  
Director

10238-02  
September 23, 2019

Ms. Mary Alice Evans, Director  
Office of Planning, State of Hawai'i  
PO Box 2359  
Honolulu HI, 96804

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū  
and Huelo License Areas

Dear Ms. Evans:

Thank you for the Office of Planning's participation in the scoping process for the subject Environmental Impact (EIS) Statement pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas. Office of Planning provided early consultation comments dated December 8, 2016, which was prior to the publication of the EISPN on February 8, 2017. Office of Planning also provided written comments dated March 2, 2017, in response to the EISPN. We acknowledge your agency's comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix J (as to the early consultation comments) and M (as to the EISPN comments).

We have taken your agency's comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui, which are now owned by Mahi Pono and planned for diversified agriculture.
2. Pursuant to HAR § 11-200-17(h), the Draft EIS discusses the Proposed Action's consistency with various plans and policies in Chapter 5 of the Draft EIS, specifically the Hawai'i Coastal Zone Management Program in Section 5.1.5, the Hawai'i State Plan in

Section 5.1.1, and the State Functional Plans in Section 5.1.2. As you suggested, the analysis is provided in tabular form, followed by discussion paragraphs.

3. The Draft EIS discusses impacts to soils associated with the Proposed Action in Section 4.1.2 of the Draft EIS.
4. The Draft EIS discusses impacts to hydrology associated with the Proposed Action in Section 4.2 of the Draft EIS as well as the reports various technical reports prepared for the Draft EIS, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); and Terrestrial and Flora and Fauna Report (See Appendix C).
5. The Draft EIS includes in Section 4.7 an assessment of the impacts of the Proposed Action to socio-economic characteristics including the agricultural economy. Various technical studies will be appended the Draft EIS and provide detailed examinations, including an Agricultural and Related Economic Impacts Report (See Appendix I) and an Economic and Fiscal Impact Analysis Report (See Appendix H).

Your agency's written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

Ms. Stacey Sills

February 22, 2017

Maui Electric Company Community Meeting Room

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MS. SILLS: My name is Stacey Sills and I have been on Maui for 25 years. And there was -- the two issues that I think I'd like to address is the six-year drought for the Upcountry cattle farmers was noted as well as you notice California had a ten-year drought. The issue I think that you need to be looking at and that needs to be studied are the actual particles tested in the water, in the people. I think the people need to be tested as well because there is a thing and it is called geoeengineering and it's being done over Maui. It's shut down the lao Valley. I am the only person in the world who documented the bombing of lao Valley and also the bombing of protest -- of the protesters on the Big Island Hawaii. They drop aerosol down bursts, they're filled with aluminum, barium, and strontium. I'm sure you're gonna pick up those particles in the environment. And I think that needs to be studied because they can create six-year droughts, ten-years droughts, and now they're creating a flood.

I just watched the same down bursts that are happening right now in Orville that happened in lao Valley. They're doing the same thing. They're -- that dam's gonna blow. Trust me, I know it, because I'm watching them. They're exploding the same aerosols that they did here in lao and this is an issue, it needs to be addressed, and you need to look at that factor in your environmental impact study. It's not a joke. I know it's top secret, we can't talk about it, but, you know what, I'm gonna talk about it, because it affects each and every one of you. It's global, it happens here, it happens all around the globe. I don't know --

How many people know about global engineering? Anyone.

Okay. That is very few. You're just ignorant. Please educate yourself. It affects you, you're breathing it. It happened today. It happens every single day. They're whitening out the planet. You'll never see a light blue sky again. Please check the particles, that's what I'd like you to do on your environmental impact statement, is protect the health of these Hawaiian people because they're being attacked.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Sills:

Thank you for participating in the scoping process for the subject Environmental Impact Statement pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and your oral comments at the February 22, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. The Draft EIS discusses impacts to hydrology associated with the Proposed Action in Section 4.2 of the Draft EIS as well as the reports various technical reports prepared for the Draft EIS, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); and Terrestrial and Flora and Fauna Report (See Appendix C).

Your oral comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Mr. Steve Slater  
February 23, 2017  
Haʻikū Park and Community Center  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

Not \$3 dollars. And the last thing is what does this EIS cost? Because if some group or the County wants to reimburse for the EIS, is this EIS going to be so expensive that it's going to make that \$160,000 starting point double? Do we know what this EIS is going to cost?

MR. SLATER: Hi. Steve Slater. I would like to have some -- well, first thing, I think 30 years is way too long the way science and biology is going. I mean, we're just breaking the surface of how important the microbial systems are to the soil, to our own human bodies, how much symbiotic both bacteria, virus, fungus. Just it's a whole new era. To lock us into a 30-year lease at this point, I don't think the EIS can be at all functional.

I think if we did an EIS in two years or five years, I think we'd be talking about completely different things on the watershed, like the connection of the microbial system from the ocean, like miniature salmon, microscopic salmon swimming upstream, carrying nutrients. I mean, we're in a whole 'nother era. I just find it's going to be very difficult to get an accurate EIS unless we bring in state-of-the-art science these days. And I don't think we're going to get that on Maui. I really think you'd have to bring in some cutting-edge biologists, look at the whole microbial system, what it means to endangered species. And we're at a time when we're not going to get a lot happening in a short period. So why can't A & B be satisfied with a one-year lease? They've been living with it for all this time, and now major changes are happening. I just can't -- you know, that leads me back into the Glyphosate/Roundup problem, like the gentleman was explaining. So much spraying. Not just on the edges; but because it's difficult for them to go, they spray right in the water.

Could we possibly get a study? You're not going to be able to go take water samples and find glyphosate, but couldn't we study some of the people who have used it as drinking water? Could they have free access to a urine test and maybe compared to these people have a higher rate of glyphosate? And remember, glyphosate also kills the microbial content. It's like it's got more repercussions than just if it gave something to human health. It's changing the whole biosphere of the area. So why didn't A & B ever -- they've never had to say how much they pumped. A & B has a record of being able to put poisons out, not inform the Health Department, not inform the County, keep secret lists. Could EIS look at what chemicals have been put in the stream? And also, A & B has been spraying -- HC&S has been spraying the cane with glyphosate to make it dry so they can burn it. That has gone into the ocean. Plus what they're spraying into the fields. So what they've put on the fields also compounds what's coming down the streams. Is that possible?

Also, you know, I own a property for the last 15 years where I can only live on catchment. Even though I have rights on my deed to two ditches, Lowrie Ditch, Haiku Ditch, and Waipio Stream, I can't exercise those rights. You can't talk to EMI about using rights on your deed. It's a whole legal battle. You're looking for trouble. I have to live on catchment. It's \$200 per thousand, I pay to have it water trucked in

**Subject:** Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Slater:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas, your written comments dated March 5, 2017, and your oral comments at the February 23, 2007 EIS Scoping Meeting. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. The Draft EIS will include in Chapter 4 an assessment of the impacts of the Proposed Action. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the Draft EIS (See Appendix A and Appendix C).
3. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams  
1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C);, Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I)

4. The Draft EIS discusses impacts to hydrology associated with the Proposed Action in Section 4.2 of the Draft EIS as well as the reports various technical reports prepared for the Draft EIS, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); and Terrestrial and Flora and Fauna Report (See Appendix C).

5. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action, including discussion of alternative lease duration.

Your written and oral comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū  
and Huelo License Areas

Dear Ms. Wilson:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas and for your written comments dated February 23, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawaiʻi Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui. The environmental impacts of the potential Water Lease will be assessed.
2. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.
3. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
4. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also

**Scoping Meeting Comments of**

Ms. Tammy Luat-Huen  
February 23, 2017  
Ha'ikū Park and Community Center  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MS. LUAT-HUEN: Thank you. My name is Tammy Luat-Huen. I am from Keanae. I live on the peninsula. And we try to farm taro in our yard, but we're the last taro farm to receive the water. So in your EIS, I would like the temperature of the water to be tested. You guys keep taking water out, the water is going very low; the sun is so hot, it makes the water hot. By the time it gets to me, all my taro was like horrible. We tried to save the -- you know, when we harvested, we tried different patches to see how it is. Oh, my god, it was terrible, and it was like spongy. So definitely I think that the EIS should include the temperature. And also, before I even started, I was supposed to tell you guys this. I tripping out that you guys are talking about our water and handing out permits to the highest bidder, like you're talking about stocks and bonds.

We're not talking about stocks and bonds. We're talking about life. We're talking about water for all of us to live, because I don't know about you, but I cannot drink money. So without water, we cannot survive. EMI has had control of East Maui's waters for way too long, also stewards of these lands.

In your EIS, I demand that EMI be ordered to restore these rivers and streams, especially the ones that they're not using. They leave all their cement, their metal, their crap. Take it out. Like if they were my tenants, I would be like, you know what, you're out, you're not going to get another lease from me. You let go our place, you're out. So I think we should demand that they restore our rivers and streams to how it was before they got it. And on that note, also in your EIS, it should say they took so much water -- when I was little, my grandpa used to work for EMI, so I know. He took me up there. There was plenty of water flow. I'm not that old. You know, I don't want to tell you guys, but I had one big birthday the other week. But I know how much water there was flowing.

When I drive home to Keanae, there's so much rivers that used to flow all the time. Now only trickles coming down. And I'm trying to remember the story about that water that used to come up the side of Waikoloa. And we always used to pull over, wash the baby bottle if something spilled, drink water. You know, we used to use that, and it's gone. I remember that. But anyway, where they took a lot of water, and now they let the rivers run bone dry. Not even like a little bit. We went all the way up to the top, dry bone. As wide as you can imagine, this river was dry. So now what's in there? Just so happens that invasive trees, bushes, vines, all kinds of weird stuff started growing in there. Now they go, oh, we are ordered to release the water, what does EMI do? Instead of they go clean the rivers and the beds because it's all grown with invasive stuff, open the water, water is flowing, no more place to go, where does it go? Every which way but loose. Not in the flow that it's supposed to be. So I honestly believe a lot of these landslides that we've been experiencing on the east side of Maui, all A & B's fault. They

Scoping Meeting Comments of Ms. Tammy Luat-Huen  
Page 2  
February 23, 2017

should have -- they were so worried about their employees, their 400 employees. They could have had their employees stay on for one more year while they go clean up all our rivers and streams. It's their responsibility.

So for the EIS, I highly recommend that you guys have them -- not ask them -- demand that they go clean up our rivers and streams to where -- to the point where they got it. And I'm sorry about that, but it makes me so mad. Because now, you know, those landslides has caused us so much havoc. We have people that are putting their lives in danger just to go to the doctor, you know. We have roads that's completely shut down for seven hours; and then what happens if there's an emergency? This is the kind of stuff that EMI personally caused. And I know that for a fact. So that's one more thing that I wanted your thing to say.

And, you know, like if it was clean, the water would flow the way it always flowed centuries ago. But when the thing is all plugged up, where does it go? It's got to go to the outside, now it's going wider and wider, and it's bringing down everything. And we're not talking small rocks. We're talking rocks as big as trucks. And now we're going to be driving home, all unaware -- especially tonight; it's dark already -- now we're driving home, and let's go play Frogger and try and jump on this side, oh, no, let's go to this side, and then here comes the rocks, you know. So you guys didn't do us no favors by giving them the lease. They literally put our lives in danger, and I'm over it. So it's time for somebody else to -- I understand that everybody on this side needs water. I do understand that. But you're talking about our water as if it's a commodity, and it ain't.

Thank you.

Ms. Tammy Luat-Huen

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Luat-Huen:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and your oral comments at the February 23, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. Section 1.3.4 of the Draft EIS discusses the Commission on Water Resources Management's (CWRM) Interim Instream Flow Standard (IIFS) Decision and Order (D&O) and the authority of the BLNR to issue a Water Lease for non-instream uses pursuant to Hawai'i Revised Statutes § 171-58, that is subject to the IIFS set by CWRM.
3. For the purposes of this Draft EIS, diversion quantities from the D&O were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area.
4. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and

September 23, 2019

provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your oral comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

**Scoping Meeting Comments of**

Ms. Tiare Lawrence  
February 22, 2017

Maui Electric Company Community Meeting Room  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

And I would also like East Maui to get a dedicated water management area. Mahalo.

MS. LAWRENCE: Aloha. My name is Tiare Lawrence. I'm here from. I'm a lineal descendant of Keanae. My tutu wahine was from there. I enjoy the bountiful akule that come in when my friend Healoha gives me bags of akule, so I know that since the -- since the restoration of some of the streams, that akule have been coming in more frequently. And it's been mind blowing for a lot of the residents out there that they get to experience that. A lot of them thought they wouldn't be able to experience this bounty that's been happening over the past few months. I'll go into details. I'd definitely like the EIS to include interviews of kapuna makua and opio from East Maui, their moku. I'm pretty sure many people in this room are willing to participate in that. I would also like to request an additional meeting be held in Keanae and Hana. The kapuna go to work so they couldn't drive the two hours to be here. I believe that their voices are being left out and they should be given the opportunity to speak.

I would like the EIS to provide the benefits of short-term versus long-term leases. The EIS should detail the impacts of the diversion of each stream, not a generalized view of the entire watershed. The EIS should consider a range of alternatives. Besides the no diversions at all alternative it should reveal the impact of just diverting enough for existing county need and the alternative of leaving enough water in every single stream so that they each receive enough to support 90 percent of stream life.

The EIS should disclose those areas that are pumping from A&B lands. The EIS should include all past impacts such as kuleana land titles, quiet titles, and a clear explanation on how A&B acquired these lands with records. And present impacts to the streams (inaudible) they have more water than normal which helped increase habitat right now. If they are given the lease, the stream habitat will be killed, that is a fact. As well as the impacts of the various broken infrastructure and leaks along the system.

Also I would like the EIS to include a map of potential loi that can be restored. This will provide an opportunity for more kalo cultivation. Kalo farmers are unable to keep up with the current demand and the kalo industry is a multimillion dollar industry with so much more potential. I would also like the draft EIS to include the following: past and present impacts on aquatic life, native plant species, invasive plant species, recreational activities, aesthetic value such as waterfalls and scenic waterways, traditional and customary practices such as kalo cultivation and gathering of oopu, hihiki, and opae. I personally believe that no future subdivisions or gentleman estates should have access to surface water for development.

I also believe the EIS should explore policy, if passed at the county level, such as allowing gray water use that would allow less use from potable sources. At the very least before any lease is given they should be required to fix the ditch system and reservoirs adequately to stop wasting 41 million gallons a day.

Ms. Tiare Lawrence

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū  
and Huelo License Areas

Dear Ms. Lawrence:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas and your oral comments at the February 22, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. Cultural Surveys Hawai'i, Inc. prepared a report in support of the Draft EIS assessing the impacts of the Proposed Action, particularly impacts on cultural resources and practices. The impacts of the Proposed Action to cultural resources and practices are discussed in Section 4.6. The report is appended to the Draft EIS (See Appendix F).
3. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the Draft EIS (See Appendix A and Appendix C).
4. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action, including discussion of alternative lease duration and volume.
5. The Draft EIS discusses impacts to hydrology associated with the Proposed Action in Section 4.2 of the Draft EIS as well as the reports various technical reports prepared for the Draft EIS, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Steam Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); and Terrestrial and Flora and Fauna Report (See Appendix C).

Environmental Impact Statement Preparation Notice  
**Proposed Water Lease for the Nāhiku, Keʻānae, Honomanū, and Huelo License Areas**  
Scoping Meeting Comments of

Mr. Tom Blackburn-Rodriguez

February 22, 2017

Maui Electric Company Community Meeting Room

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. BLACKBURN-RODRIGUEZ: My name is Tom Blackburn-Rodriguez. I live in Kihei. My family has lived in Hawaii since 1870, that's the Blackburn side of the family, the Rodriguez family got here before the wall was built and we were refugees from the revolution in Mexico and it wasn't a pretty process to be a refugee.

I'm representing Go Maui, Incorporated. Go Maui is a nonpartisan, nonprofit organization with a focus on affordable workforce housing, water, and a healthy economy with good-paying jobs and benefits, among other issues. There are many issues to consider in the development of this EIS and it is a challenging task. There are five questions I would like to highlight for your consideration and which should be answered in the EIS.

Briefly, first: Will the EIS cover and assess what would happen to Central Maui if there were no agriculture there because there's not enough water.

Number two, second: Will the EIS cover what can happen to our hopes of energy and food sustainability on Maui if the Central Maui lands cannot be cultivated?

Third: What about Upcountry residents? The EIS -- farmers, ranches, etc. The EIS should address where they will get their water if there's no state lease.

Fourth: I have many friends who are in business Upcountry. Will the EIS address what will happen to them and the other businesses in Upcountry Maui if there's no more East Maui stream water?

Finally and perhaps most important: Will the EIS cover what development might occur if there's no agriculture in Central Maui? These and other questions you will hear and have heard tonight are important and the answers will have real consequences for our community which we all love.

And, finally, I would just like to endorse the concept of having a meeting in Hana. Although the Maui County Council has facilities where you can do remote meetings as well, I think it's very important for the people of Hana to be able to participate fully in a meeting of this nature and strongly endorse that. Thank you.

**Comments Regarding State Water Lease EIS**  
**Kahului, Maui, Hawaii**  
February 22, 2017

Aloha and good evening,

My name is Tom Blackburn-Rodriguez and I live in Kihei. My family has lived in Hawaii since 1870. I am representing Go Maui, Inc. Go Maui is a non-partisan non-profit organization with a focus on affordable workforce housing, water and a healthy economy with good-paying jobs and benefits, among other issues.

There are many issues to consider in the development of this EIS and it is a challenging task.

There are five questions I would like to highlight for your consideration and which should be answered in any EIS.

First, will the EIS cover and assess what would happen to Central Maui if there were no agriculture there, because there's not enough water?

Second, Will the EIS cover what can happen to our hopes of energy and food sustainability on Maui if the Central Maui lands can't be cultivated?

Third, what about the Up County residents? The EIS should address where they will get their water if there's no state lease.

Fourth, I have many friends who are in business Up Country. Will the EIS address what will happen to them and the other businesses in Upcountry Maui if there's no more East Maui stream water?

Finally, and perhaps most important, Will the EIS cover what development might occur if there's no agriculture in Central Maui?

These and other questions you will hear tonight are important and the answers will have real consequences for our community, which we all love.

Mahalo.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Blackburn-Rodriguez:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas, your written comments dated February 22, 2017, and oral comments at the February 22, 2017 scoping meeting. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawaii's Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. The Draft EIS includes in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action, including a discussion of the No Action Alternative should the Water Lease not be issued.
3. The Social Impact Assessment (See Appendix G), Economic and Fiscal Impact Study (See Appendix H), and Agricultural and Related Economic Impacts report (See Appendix I) assess the social, economic, and agricultural impacts of the Proposed Action and alternatives.

Your written and oral comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

Proposed Water Lease for the Nāhiku, Keʻānae, Honomanū, and Huelo License Areas**

**Scoping Meeting Comments of**

Mr. Zack Williams

February 22, 2017

Maui Electric Company Community Meeting Room

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. WILLIAMS: Hi, everyone. Aloha. I'm Zack Williams. I'm from Lower Nahiku. I'm just here to say a couple of things really quick about the EMI and what I would like in the EIS. So starting from the beginning, A&B, their subsidiaries HC&S and East Maui Irrigation Company have been very deceitful in what they're saying their uses are. They said right now they've restored 100 percent of Makapipi Stream. I walked up, because we cannot drive and I'm a residence of Nahiku, I walked up to their diversion yesterday, their eastern boundary diversion because they have multiple diversion at different layers of each stream so they can take not water from one place, but multiple places in each stream and they have pumps as well, they can pump water out of the streams.

So on their eastern most diversion, they said they'd give us 100 percent stream flow, but I have a video showing they've opened a little door and it's about four or six inches deep where the water flows out the door and then their flume, which is right on the inside of their diversion, has as much water as they could be possibly taking still flowing into their diversion. And I have video evidence of this from yesterday. And that's what they call 100 percent stream flow, they get more than 50 percent of our water. Well, I'm a new kalo farmer, but I'm a lifelong resident of Lower Nahiku. I'm struggling to get my rhodes going, but that's just wind, Kona winds for the last two weeks. And for the first time since July we've lost mauka to makai connectivity. We've had that since July of this year. So yesterday I went up to the diversion, then I went down to the bridge at the bottom of the road and into the ocean to check the mauka to makai connectivity.

My neighbors, the (Hawaiian name), were getting opae and because the water stopped flowing at Wahine Mo, which is about -- a pond 300 yards up from the ocean, they had to go above there to even get opae in their ponds because it was all neko, because HC&S and EMI are not giving us our fair share and they're saying they're giving us 100 percent. So I want. I guess, the definitions of 100 percent water restored to actually be 100 percent. They're like falsifying this to everybody in Maui County and the State of Hawaii saying they're giving us our water and I still no more water.

And as far as Auntie saying, "Oh, we're worried about (inaudible) guys paying for the water," hey, don't worry us, we'll take care, so -- And one more thing too about the opae, the hihwi, the pipiwai, the (Hawaiian word), the moi, all these things are all interdependent on that fresh water connectivity into the ocean. But we also need accountability, we need (audible) to come down and count the opae, count the hihwi, count the pipiwai, the oopu. And we need this above and below the diversions on every single river and then we can decide who gets to take what. But until we have a precedent to preserve our animals and our people and everybody who lives in Maui (Hawaiian word), then I don't -- I don't see

Scoping Meeting Comments of Mr. Zack Williams

Page 2

February 22, 2017

--I don't know where the future is going with EMI, but they need to come forward and be way more transparent.

And also their water lines are all bust, they call them broken water lines, they're just leaking water yesterday, buried under gingers. And the EMI guys are driving by in their trucks, there's no way they would hear that. I'm walking by, I heard the thing, I un-- dug under gingers and ahui for like ten to fifteen feet with my cane knife to find a four-inch water line completely ruptured, just busting water they've diverted from Makapipi Stream straight into the bushes. Where's the accountability? How long has this been busted? I just found it yesterday, it was buried a foot underground. If I wasn't walking, I wouldn't have heard it.

And lastly, I talked to Uncle Frank James, who is a lineal descendant of (Hawaiian name) in East Maui. And I think Kuihewa, Maui Land and Pine, they used to have on Kuihewa, but they don't take surface water from Kuihewa, but they do take water, they pump it, because it's one of the largest aquifers we have in East Maui. And since 1990 when they put in that pump, Uncle Frank told me that the pond, what they call Blue Pond, is actually only running for two or three weeks after a big storm and then it dries up completely dry. His whole life that never happened, but since 1990 when they put in that pump, that's been happening. And what effect did that -- these pumps and these pumps stations have an effect on other ahupuaas? What about the next ahupuaa in Koolau? But we're all connected and there's been no scientific study or research to see how our aquifers are connected. When you take from one place, people are affected somewhere else. So they cannot just say, Oh, this and that. We need way more, way more scientific impact statements and, I don't know, research. Anyway, that's all I have to say.

September 23, 2019

Mr. Zack Williams

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū  
and Huelo License Areas

Dear Mr. Williams:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas and your oral comments at the February 22, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
1. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Steam Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Re: EISP for Proposed Lease for the Nahiku, Ke`anae, Honomanu, and Huelo License Areas of Public Land, Maui, Hawaii

Dear Mr. Okamoto,

Mahalo for the opportunity to provide comments on this Environmental Impact Statement Preparation Notice (EISP) for the use of water from four license areas consisting of 33,000 acres of public lands and waters in East Maui.

As a landowner/ resident of Ho`olawa who has legal rights to use the waters of Ho`olawanui and Ho`olawali`ili`i streams I am personally affected by the A&B request to secure 30 year leases for 33,000 acres of public lands in the East maui Lease areas. My lands and water right apply to the Huelo lease area. Our community has no public water system and we are entirely dependent upon rainfall and the streams for our water supply.

Myself and my family and my neighbors have been impacted by the longterm diversions of our streams by A&B/EMI ditch system. Our streams are so diverted, by the four levels of EMI ditches that there is rarely any flow at all except during rainstorms. This deprives me and my family and my neighbors of sufficient water for domestic use forcing us have limited water available for our needs.

I request that the Draft EIS have a specific discussion of the impacts of A&B/EMI diversions on Ho`olawanui and neighboring streams that have never been included in the 2001 IIFS petition contested case. The discussion should include amounts historically diverted from each stream; amounts planned to be diverted from each stream; amounts planned to be restored to each stream to meet the legally protected rights of downstream communities and actions proposed to care for the watershed productivity of the Huelo lease lands where the diversions occur.

In the resent past the A&B/EMI diversions below the Hana highway took all of the water from Ho`olawa stream and this created an expanse of river bed with out running water. This not only destroyed the once abundant aquatic life and made it harder for our farming community to grow our food but also provided a prime breeding ground for mosquitos. I not only consider this to be poor stewardship of our natural resources but dangerous. If there was ever to be an epidemic of a mosquito born illness, having large areas of standing water could prove fatal to members of our community. It's for these reasons that I request a minimum water flow standard be set for these streams, that meets the environments need for continual flow and the domestic and agricultural needs of my community.

I request to be a consulted party during the entire EIS process for the proposed Lease request.

Zen Kekoa Powers

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū  
and Huelo License Areas

Dear Mr. Powers:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas and for your written comments dated March 10, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawaiʻi Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued *"right, privilege, and authority to enter and go upon"* the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas for the *"purpose of developing, diverting, transporting, and using government owned waters"* through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui. The environmental impacts of the potential Water Lease will be assessed.
2. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
3. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the Draft EIS (See Appendix A and Appendix C).
4. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource

Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Vice President, Director of Planning

Subject: EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Earl Matsukawa,

Friends,

We have seen an increase in water flow in several streams since the decline of Maui's sugar industry. Seeing the streams flow has greatly enhanced the ambiance of the region and ability to grow Taro for many local residents. Re-establishing minimum stream flows is a wonderful step forward for our watershed. Better to reduce unnecessary water waste than to take all the water from our streams. As you know, BLNR has tasked A&B with the job of commissioning a consultant to prepare an EIS for its proposed 30 year Water Lease for East Maui streams which, if granted, would give A&B the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Kēʻanae, Honomanū, and Huelo License Areas.

Because A&B is in charge of procuring the EIS, I am worried that it will not include a thorough study of both the full environmental impacts and alternatives to a 30 year lease. It will also give A&B an unfair advantage if and when the lease goes up for public auction, as it is legally required to do so. By tasking A&B with commissioning and paying for the EIS, this government process has lost legitimacy because it appears slanted in A&B's favor.

To remedy this, I request that the DLNR instead pay for and direct the consultant for this EIS. Only if this is done will core parts of the EIS - the definition of the current environment and the identification of alternatives - be comprehensive and encompass all the possible outcomes for the management of these waters and areas. This will also help instill trust that the completed EIS will be impartial and independent of A&B's specific wants.

No matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on aquatic stream life and Native Hawaiian cultural practices. The EIS should also explore multiple alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. It is important that this long-awaited EIS is done correctly, which means the process should be directed and paid for by DLNR and include a thorough analysis of all possible impacts from and alternatives to A&B's proposal. I ask that DLNR take direct control of this process as soon as possible.

Mahalo for your time.

Sincerely,

Alan Bradbury

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Kēʻanae, Honomanū  
and Huelo License Areas

Dear Mr. Bradbury:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Kēʻanae, Honomanū, and Huelo License Areas and for your written comments dated March 9, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawaiʻi Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Kēʻanae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawaiʻi Revised Statutes (HRS) Chapter 343 and Hawaiʻi Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

002561

4. Trutina and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Lentz:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 9, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

4. Trutta and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).

5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Steam Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Subject: EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Wilson Okamoto Corporation,

As you know, BLNR has tasked A&B with the job of commissioning a consultant to prepare an EIS for its proposed 30 year Water Lease for East Maui streams which, if granted, would give A&B the continued "right, privilege, and authority to enter and go upon" the N'hiiku, Ke'anae, Honomanu?, and Huelo License Areas.

Because A&B is in charge of procuring the EIS, I am worried that it will not include a thorough study of both the full environmental impacts and alternatives to a 30 year lease. It will also give A&B an unfair advantage if and when the lease goes up for public auction, as it is legally required to do so. By tasking A&B with commissioning and paying for the EIS, this government process has lost legitimacy because it appears slanted in A&B's favor.

To remedy this, I request that the DLNR instead pay for and direct the consultant for this EIS. Only if this one will core parts of the EIS - the definition of the current environment and the identification of alternatives - be comprehensive and encompass all the possible outcomes for the management of these waters and areas. This will also help instill trust that the completed EIS will be impartial and independent

of A&B's specific wants.

No matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on aquatic stream life and Native Hawaiian cultural practices. The EIS should also explore multiple alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. It is important that this long-awaited EIS is done correctly, which means the process should be directed and paid for by DLNR and include a thorough analysis of all possible impacts from and alternatives to A&B's proposal. I ask that DLNR take direct control of this process as soon as possible.

Mahalo for your time.

Sincerely,  
Arianna Feinberg

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū,  
and Huelo License Areas

Dear Ms. Feinberg:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas and for your written comments dated March 6, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

4. Truttia and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversion on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Subject: EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Wilson Okamoto Corporation,

Aloha everyone,  
As you know, BLNR has tasked A&B with the job of commissioning a consultant to prepare an EIS for its proposed 30 year Water Lease for East Maui streams which, if granted, would give A&B the continued "right, privilege, and authority to enter and go upon" the N?hiku, Ke?anae, Honoman?, and Huelo License Areas.

Where are the cultural practitioners overseeing this process?

Asking A&B to procure their own EIS is like the fox guarding the hen house.

Because A&B is in charge of procuring the EIS, I am worried that it will not include a thorough study of both the full environmental impacts and alternatives to a 30 year lease. It will also give A&B an unfair advantage if and when the lease goes up for public auction, as it is legally required to do so. By tasking A&B with commissioning and paying for the EIS, this government process has lost legitimacy because it appears slanted in A&B's favor.

To remedy this, I request that the DLNR instead pay for and direct the consultant for this EIS. Only if this is done will core parts of the EIS - the definition of the current environment and the identification of alternatives - be comprehensive and encompass all the possible outcomes for the management of these alters and areas. This will also help instill trust that the completed EIS will be impartial and independent A&B's specific wants.

No matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on aquatic stream life and Native Hawaiian cultural practices. The EIS should also explore multiple alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. It is important that this long-awaited EIS is done correctly, which means the process should be directed and paid for by DLNR and include a thorough analysis of all possible impacts from and alternatives to A&B's proposal. Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū  
and Huelo License Areas

Dear Ms. Barry:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas and for your written comments dated March 10, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

4. Truttia and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).

5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).

6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversion on 33 East Maui Streams using the Hawaiian Steam Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the N?hiku, Ke?anae, Honoman?,  
and Huelo License Areas

Dear Mr. Ferguson:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the N?hiku, Ke?anae, Honoman?, and Huelo License Areas and for your written comments dated March 9, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the N?hiku, Ke?anae, Honoman?, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

002573

10238-02  
Letter to Mr. Bob Ferguson  
Page 2  
September 23, 2019

4. Trutina and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action on freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Subject: EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Earl Matsukawa,

As you know, BLNR has tasked A&B with the job of commissioning a consultant to prepare an EIS for its proposed 30 year Water Lease for East Maui streams which, if granted, would give A&B the continued "right, privilege, and authority to enter and go upon" the N?hiku, Ke?anae, Honoman?, and Huelo License Areas.

Because A&B is in charge of procuring the EIS, I am worried that it will not include a thorough study of both the full environmental impacts and alternatives to a 30 year lease. It will also give A&B an unfair advantage if and when the lease goes up for public auction, as it is legally required to do so. By tasking A&B with commissioning and paying for the EIS, this government process has lost legitimacy because it appears slanted in A&B's favor.

To remedy this, I request that the DLNR instead pay for and direct the consultant for this EIS. Only if this is done will core parts of the EIS - the definition of the current environment and the identification of alternatives - be comprehensive and encompass all the possible outcomes for the management of these waters and areas. This will also help instill trust that the completed EIS will be impartial and independent of A&B's specific wants.

No matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on aquatic stream life and Native Hawaiian cultural practices. The EIS should also explore multiple alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. It is important that this long-awaited EIS is done correctly, which means the process should be directed and paid for by DLNR and include a thorough analysis of all possible impacts from and alternatives to A&B's proposal. I ask that DLNR take direct control of this process as soon as possible.

Mahalo for your time.

Sincerely,  
chi guyer

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū,  
and Huelo License Areas

Dear Chi Guyer:

I Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 9, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

4. Truttia and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversion on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū  
and Huelo License Areas

Dear Mr. Fernandez:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas and for your written comments dated March 7, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.

3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

4. Trutta and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).

5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Steam Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

Subject: EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Wilson Okamoto Corporation,

Alexander & Baldwin has dominated the islands' government, policy, land, economy and people for almost 150 years. Now is the time to stand up to them in the name of fairness and logic.

It is not fair that A&B diverts water from streams so that local farmers are unable to water their crops and it is equally unfair to have A&B personally select and pay for an EIS. Knowing the power that A&B has wielded over elected and appointed government officials over the decades, it is only logical to wonder how their personally-hired consultants for an EIS could possibly remain impartial. There is no logic in letting the wolf guard the hen house. Now is the time to prove that an impartial EIS is possible; and that would be to have the DLNR pay for it.

No matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on aquatic stream life and Native Hawaiian cultural practices. The EIS should also explore multiple alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. It is important that this long-awaited EIS is done correctly, which means the process should be directed and led for by DLNR and include a thorough analysis of all possible impacts from and alternatives to A&B's proposal. I ask that DLNR take direct control of this process as soon as possible.

Mahalo for your time.

Sincerely,  
Denise Boisvert

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Boisvert:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 8, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

10238-02  
Letter to Ms. Denise Boisvert  
Page 2  
September 23, 2019

4. Truttia and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
  5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
  6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversion on 33 East Maui Streams using the Hawaiian Steam Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).
- Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Re: EISP for Proposed Lease for the Nāhiku, Keʻanae, Honomanu, and Huelo License Areas of Public Land, Maui, Hawaii

Dear Mr. Okamoto,

Mahalo for the opportunity to provide comments on this Environmental Impact Statement Preparation Notice (EISP) for the use of water from four license areas consisting of 33,000 acres of public lands and waters in East Maui.

As a landowner in the community on Loomis Road in Huelo who has legal rights to use the waters of Hoʻolawa Stream I am personally affected by the A&B request to secure 30 year leases 33,000 acres of public lands in the East Maui Lease areas. My lands and water right apply to Huelo lease area. Our community has no public water system and we are entirely dependent

upon rainfall and the streams for our water supply.

Myself and my family and my neighbors have been impacted by the long-term diversions of our streams by A&B/EMI ditch system. Our streams are so diverted, by the four levels of EMI ditches that there is rarely any flow at all except during rainstorms. This deprives me and my family and neighbors—at least 15 neighbors not including our family of 5—of sufficient water for domestic use forcing us have limited water available for our needs.

I request that the Draft EIS have a specific discussion of the impacts of A&B/EMI diversions on Hoʻolawa Stream and neighboring streams that have never been included in the 2001 IIFS petition contested case. The discussion should include amounts historically diverted from each stream; amounts planned to be diverted from each stream; amounts planned to be restored to each stream to meet the legally protected rights of downstream communities, and actions proposed to care for the watershed productivity of the Huelo lease lands where the diversions occur.

These last points are of great importance! We have seen throughout our time on Hoʻolawa (45 yrs) a disappointing lessening of stream life. Even if there haven't been definitive studies of the minimal daily/annual stream flow to restore healthy stream life and provide for fair Ag and domestic use of the water, an estimated range needs to be determined to meet these legally protected rights of the downstream communities.

I am requesting to be a consulted party during the entire EIS process for the proposed Lease request.

Yours truly,

Diana L. Dahl

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū  
and Huelo License Areas

Dear Ms. Dahl:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas and for your written comments dated March 10, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

4. Truttia and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
  5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
  6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversion on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).
- Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

Subject: EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Wilson Okamoto Corporation,

As you know, DLNR has tasked A&B with the job of commissioning a consultant to prepare an EIS for its proposed 30 year Water Lease for East Maui streams which, if granted, would give A&B the continued "right, privilege, and authority to enter and go upon" the N?hiku, Ke?anae, Honoman?, and Huelo License Areas.

Because A&B is in charge of procuring the EIS, I am worried that it will not include a thorough study of both the full environmental impacts and alternatives to a 30 year lease. It will also give A&B an unfair advantage if and when the lease goes up for public auction, as it is legally required to do so. By tasking A&B with commissioning and paying for the EIS, this government process has lost legitimacy because it appears slanted in A&B's favor.

To remedy this, I request that the DLNR instead pay for and direct the consultant for this EIS. Only if this is done will core parts of the EIS - the definition of the current environment and the identification of alternatives - be comprehensive and encompass all the possible outcomes for the management of these waters and areas. This will also help instill trust that the completed EIS will be impartial and independent of A&B's specific wants.

matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on geologic stream life and Native Hawaiian cultural practices. The EIS should also explore multiple

alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. It is important that this long-awaited EIS is done correctly, which means the process should be directed and paid for by DLNR and include a thorough analysis of all possible impacts from and alternatives to A&B's proposal. I ask that DLNR take direct control of this process as soon as possible.

Mahalo for your time.

Sincerely,  
Donald Erway

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the N?hiku, Ke?anae, Honoman? and Huelo License Areas

Dear Mr. Van Hoose:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the N?hiku, Ke?anae, Honoman?, and Huelo License Areas and for your written comments dated March 9, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the N?hiku, Ke?anae, Honoman?, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.
4. Trutta and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

002588

impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).

5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Subject: EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Earl Matsukawa,

As you know, BLNR has tasked A&B with the job of commissioning a consultant to prepare an EIS for its proposed 30 year Water Lease for East Maui streams which, if granted, would give A&B the continued "right, privilege, and authority to enter and go upon" the N?hiku, Ke?anae, Honoman?, and Huelo License Areas.

Because A&B is in charge of procuring the EIS, I am worried that it will not include a thorough study of both the full environmental impacts and alternatives to a 30 year lease. It will also give A&B an unfair advantage if and when the lease goes up for public auction, as it is legally required to do so. By tasking A&B with commissioning and paying for the EIS, this government process has lost legitimacy because it appears slanted in A&B's favor.

To remedy this, I request that the DLNR instead pay for and direct the consultant for this EIS. Only if this is done will core parts of the EIS - the definition of the current environment and the identification of alternatives - be comprehensive and encompass all the possible outcomes for the management of these waters and areas. This will also help instill trust that the completed EIS will be impartial and independent of A&B's specific wants.

No matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on aquatic stream life and Native Hawaiian cultural practices. The EIS should also explore multiple alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. It is important that this long-awaited EIS is done correctly, which means the process should be directed and paid for by DLNR and include a thorough analysis of all possible impacts from and alternatives to A&B's proposal. I ask that DLNR take direct control of this process as soon as possible.

Mahalo for your time.

Sincerely,

Eileen Naaman

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū  
and Huelo License Areas

Dear Ms. Naaman:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas and for your written comments dated March 13, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

4. Truttia and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversion on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū,  
and Huelo License Areas

Dear Ms. Disalvo:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas and for your written comments dated March 7, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Vierra:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 7, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

002595

10238-02  
Letter to Mr. George Vierra  
Page 2  
September 23, 2019

4. Trutina and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Subject: EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Wilson Okamoto Corporation,

As you know, BLNR has tasked A&B with the job of commissioning a consultant to prepare an EIS for its proposed 30 year Water Lease for East Maui streams which, if granted, would give A&B the continued "right, privilege, and authority to enter and go upon" the N?hiku, Ke?anae, Honoman?, and Huelo License Areas.

Because A&B is in charge of procuring the EIS, I am worried that it will not include a thorough study of both the full environmental impacts and alternatives to a 30 year lease. It will also give A&B an unfair advantage if and when the lease goes up for public auction, as it is legally required to do so. By tasking A&B with commissioning and paying for the EIS, this government process has lost legitimacy because it appears slanted in A&B's favor.

To remedy this, I request that the DLNR instead pay for and direct the consultant for this EIS. Only if this is done will core parts of the EIS - the definition of the current environment and the identification of alternatives - be comprehensive and encompass all the possible outcomes for the management of these waters and areas. This will also help instill trust that the completed EIS will be impartial and independent of A&B's specific wants.

No matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on aquatic stream life and Native Hawaiian cultural practices. The EIS should also explore multiple

alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. It is important that this long-awaited EIS is done correctly, which means the process should be directed and paid for by DLNR and include a thorough analysis of all possible impacts from and alternatives to A&B's proposal. I ask that DLNR take direct control of this process as soon as possible.

Mahalo for your time.

Sincerely,  
Grace Woods

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Woods:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 10, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.
4. Trutta and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).

5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Barrow:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 7 and 11, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

4. Truttia and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversion on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

Subject: EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Earl Matsukawa,

As you know, DLNR has tasked A&B with the job of commissioning a consultant to prepare an EIS for its proposed 30 year Water Lease for East Maui streams which, if granted, would give A&B the continued "right, privilege, and authority to enter and go upon" the N?hiku, Ke?anae, Honoman?, and Huelo License Areas.

Because A&B is in charge of procuring the EIS, I am worried that it will not include a thorough study of both the full environmental impacts and alternatives to a 30 year lease. It will also give A&B an unfair advantage if and when the lease goes up for public auction, as it is legally required to do so. By tasking A&B with commissioning and paying for the EIS, this government process has lost legitimacy because it appears slanted in A&B's favor.

To remedy this, I request that the DLNR instead pay for and direct the consultant for this EIS. Only if this is done will core parts of the EIS - the definition of the current environment and the identification of alternatives - be comprehensive and encompass all the possible outcomes for the management of these waters and areas. This will also help instill trust that the completed EIS will be impartial and independent of A&B's specific wants.

No matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on aquatic stream life and Native Hawaiian cultural practices. The EIS should also explore multiple alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. It is important that this long-awaited EIS is done correctly, which means the process should be directed and paid for by DLNR and include a thorough analysis of all possible impacts from and alternatives to A&B's proposal. I ask that DLNR take direct control of this process as soon as possible.

Mahalo for your time.

Sincerely,

Jack Rollens

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the N?hiku, Ke?anae, Honoman? and Huelo License Areas

Dear Mr. Rollens:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the N?hiku, Ke?anae, Honoman?, and Huelo License Areas and for your written comments dated March 9, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the N?hiku, Ke?anae, Honoman?, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

002603

10238-02  
Letter to Mr. Jack Rollens  
Page 2  
September 23, 2019

4. Truttia and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Steam Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Subject: EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Wilson Okamoto Corporation,

Water is life. The water that flows in the streams from Huelo to N'hiku, belongs to the animals, the plants and the generations of people who live on that land.

As you know, BLNR has tasked A&B with the job of commissioning a consultant to prepare an EIS for its proposed 30 year Water Lease for East Maui streams which, if granted, would give A&B the continued "right, privilege, and authority to enter and go upon" the Ke'anae, Honomanu, and Huelo License Areas.

Because A&B is in charge of procuring the EIS, I am worried that it will not include a thorough study of both the full environmental impacts and alternatives to a 30 year lease. It will also give A&B an unfair advantage if and when the lease goes up for public auction, as it is legally required to do so. By tasking A&B with commissioning and paying for the EIS, this government process has lost legitimacy because it appears slanted in A&B's favor.

To remedy this, I request that the DLNR instead pay for and direct the consultant for this EIS. Only if this is done will core parts of the EIS - the definition of the current environment and the identification of alternatives - be comprehensive and encompass all the possible outcomes for the management of these waters and areas. This will also help instill trust that the completed EIS will be impartial and independent of A&B's specific wants.

No matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on aquatic stream life and Native Hawaiian cultural practices.

The EIS should also explore multiple alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

I remember when the streams were full in 1960s through the 1970s in spite of sugar cane production. Since 1980s, thirty years ago, East Maui community's struggle for water has long been ignored by A&B. It is important that this long-awaited EIS is done correctly, which means the process should be directed and paid for by DLNR and include a thorough analysis of all possible impacts from and alternatives to A&B's proposal. I ask that DLNR take direct control of this process as soon as possible.

Mahalo for your time.

Subject: EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Wilson Okamoto Corporation,

As you know, BLNR has tasked A&B with the job of commissioning a consultant to prepare an EIS for its proposed 30 year Water Lease for East Maui streams which, if granted, would give A&B the continued "right, privilege, and authority to enter and go upon" the N?hiku, Ke?anae, Honoman?, and Huelo License Areas.

Because A&B is in charge of procuring the EIS, I am worried that it will not include a thorough study of both the full environmental impacts and alternatives to a 30 year lease. It will also give A&B an unfair advantage if and when the lease goes up for public auction, as it is legally required to do so. By tasking A&B with commissioning and paying for the EIS, this government process has lost legitimacy because it appears slanted in A&B's favor.

To remedy this, I request that the DLNR instead pay for and direct the consultant for this EIS. Only if this is done will core parts of the EIS - the definition of the current environment and the identification of alternatives - be comprehensive and encompass all the possible outcomes for the management of these waters and areas. This will also help instill trust that the completed EIS will be impartial and independent of A&B's specific wants.

No matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on aquatic stream life and Native Hawaiian cultural practices. The EIS should also explore multiple

alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. It is important that this long-awaited EIS is done correctly, which means the process should be directed and paid for by DLNR and include a thorough analysis of all possible impacts from and alternatives to A&B's proposal. I ask that DLNR take direct control of this process as soon as possible.

Mahalo for your time.

Sincerely,  
James Padgett

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū,  
and Huelo License Areas

Dear Mr. Padgett:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas and for your written comments dated March 9, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawaiʻi Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawaiʻi Revised Statutes (HRS) Chapter 343 and Hawaiʻi Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

002610

10238-02  
Letter to Mr. James Padgett  
Page 2  
September 23, 2019

4. Trutina and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action on freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).

5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).

6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Subject: EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Earl Matsukawa,

As you know, BLNR has tasked A&B with the job of commissioning a consultant to prepare an EIS for its proposed 30 year Water Lease for East Maui streams which, if granted, would give A&B the continued "right, privilege, and authority to enter and go upon" the N?hiku, Ke?anae, Honoman?, and Huelo License Areas.

Because A&B is in charge of procuring the EIS, I am worried that it will not include a thorough study of both the full environmental impacts and alternatives to a 30 year lease. It will also give A&B an unfair advantage if and when the lease goes up for public auction, as it is legally required to do so. By tasking A&B with commissioning and paying for the EIS, this government process has lost legitimacy because it appears slanted in A&B's favor.

To remedy this, I request that the DLNR instead pay for and direct the consultant for this EIS. Only if this is done will core parts of the EIS - the definition of the current environment and the identification of alternatives - be comprehensive and encompass all the possible outcomes for the management of these waters and areas. This will also help instill trust that the completed EIS will be impartial and independent of A&B's specific wants.

No matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on aquatic stream life and Native Hawaiian cultural practices. The EIS should also explore multiple alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. It is important that this long-awaited EIS is done correctly, which means the process should be directed and paid for by DLNR and include a thorough analysis of all possible impacts from and alternatives to A&B's proposal. I ask that DLNR take direct control of this process as soon as possible.

Mahalo for your time.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū,  
and Huelo License Areas

Dear Ms. Blakeley:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas and for your written comments dated March 9, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

4. Truttia and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversion on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Subject: EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Wilson Okamoto Corporation,

As you know, DLNR has tasked A&B with the job of commissioning a consultant to prepare an EIS for its proposed 30 year Water Lease for East Maui streams which, if granted, would give A&B the continued "right, privilege, and authority to enter and go upon" the N?hiku, Ke?anae, Honoman?, and Huelo License Areas.

Because A&B is in charge of procuring the EIS, I am worried that it will not include a thorough study of both the full environmental impacts and alternatives to a 30 year lease. It will also give A&B an unfair advantage if and when the lease goes up for public auction, as it is legally required to do so. By tasking A&B with commissioning and paying for the EIS, this government process has lost legitimacy because it appears slanted in A&B's favor.

To remedy this, I request that the DLNR instead pay for and direct the consultant for this EIS. Only if this is done will core parts of the EIS - the definition of the current environment and the identification of alternatives - be comprehensive and encompass all the possible outcomes for the management of these waters and areas. This will also help instill trust that the completed EIS will be impartial and independent of A&B's specific wants.

matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on geologic stream life and Native Hawaiian cultural practices. The EIS should also explore multiple

alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. It is important that this long-awaited EIS is done correctly, which means the process should be directed and paid for by DLNR and include a thorough analysis of all possible impacts from and alternatives to A&B's proposal. I ask that DLNR take direct control of this process as soon as possible.

Mahalo for your time.

Sincerely,  
Joan Heartfield PhD

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Dr. Heartfield:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 9, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.
4. Trutta and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).

5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Steam Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Nix:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 9, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

10238-02  
Letter to Mr. John Nix  
Page 2  
September 23, 2019

4. Trutta and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

Subject: EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Wilson Okamoto Corporation,

As you know, BLNR has tasked A&B with the job of commissioning a consultant to prepare an EIS for its proposed 30 year Water Lease for East Maui streams which, if granted, would give A&B the continued "right, privilege, and authority to enter and go upon" the N?hiku, Ke?anae, Honoman?, and Huelo License Areas.

Because A&B is in charge of procuring the EIS, I am worried that it will not include a thorough study of both the full environmental impacts and alternatives to a 30 year lease. It will also give A&B an unfair advantage if and when the lease goes up for public auction, as it is legally required to do so. By tasking A&B with commissioning and paying for the EIS, this government process has lost legitimacy because it appears slanted in A&B's favor.

To remedy this, I request that the DLNR instead pay for and direct the consultant for this EIS. Only if this is done will core parts of the EIS - the definition of the current environment and the identification of alternatives - be comprehensive and encompass all the possible outcomes for the management of these waters and areas. This will also help instill trust that the completed EIS will be impartial and independent of A&B's specific wants.

No matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on aquatic stream life and Native Hawaiian cultural practices. The EIS should also explore multiple

alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. It is important that this long-awaited EIS is done correctly, which means the process should be directed and paid for by DLNR and include a thorough analysis of all possible impacts from and alternatives to A&B's proposal. I ask that DLNR take direct control of this process as soon as possible.

Mahalo for your time.

Sincerely,

John Norman

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū  
and Huelo License Areas

Dear Mr. Norman:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas and for your written comments dated March 10, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawaiʻi Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawaiʻi Revised Statutes (HRS) Chapter 343 and Hawaiʻi Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

4. Trutna and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Subject: EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Wilson Okamoto Corporation,

As you know, BLNR has tasked A&B with the job of commissioning a consultant to prepare an EIS for its proposed 30 year Water Lease for East Maui streams which, if granted, would give A&B the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas.

Because A&B is in charge of procuring the EIS, I am worried that it will not include a thorough study of both the full environmental impacts and alternatives to a 30 year lease. It will also give A&B an unfair advantage if and when the lease goes up for public auction, as it is legally required to do so. By tasking A&B with commissioning and paying for the EIS, this government process has lost legitimacy because it appears slanted in A&B's favor.

To remedy this, I request that the DLNR instead pay for and direct the consultant for this EIS. Only if this is done will core parts of the EIS - the definition of the current environment and the identification of alternatives - be comprehensive and encompass all the possible outcomes for the management of these waters and areas. This will also help instill trust that the completed EIS will be impartial and independent of A&B's specific wants.

No matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on aquatic stream life and Native Hawaiian cultural practices. The EIS should also explore multiple alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. It is important that this long-awaited EIS is done correctly, which means the process should be directed and paid for by DLNR and include a thorough analysis of all possible impacts from and alternatives to A&B's proposal. I ask that DLNR take direct control of this process as soon as possible.

EIS should include the long term effects of the original water leases, and the cost of remediation of the damaged ecosystems involved. A&B and EMI should pay for it, but the investigation should be done by DLNR.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū  
and Huelo License Areas

Dear Dr. Kolm:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas and for your written comments dated March 7, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawaiʻi Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawaiʻi Revised Statutes (HRS) Chapter 343 and Hawaiʻi Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

10238-02  
Letter to Dr. Joseph Kohn  
Page 2  
September 23, 2019

4. Trutina and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Subject: EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Wilson Okamoto Corporation,

As you know, BLNR has tasked A&B with the job of commissioning a consultant to prepare an EIS for its proposed 30 year Water Lease for East Maui streams which, if granted, would give A&B the continued "right, privilege, and authority to enter and go upon" the N?hiku, Ke?anae, Honoman?, and Huelo License Areas.

Because A&B is in charge of procuring the EIS, I am worried that it will not include a thorough study of both the full environmental impacts and alternatives to a 30 year lease. It will also give A&B an unfair advantage if and when the lease goes up for public auction, as it is legally required to do so. By tasking A&B with commissioning and paying for the EIS, this government process has lost legitimacy because it appears slanted in A&B's favor.

To remedy this, I request that the DLNR instead pay for and direct the consultant for this EIS. Only if this is done will core parts of the EIS - the definition of the current environment and the identification of alternatives - be comprehensive and encompass all the possible outcomes for the management of these waters and areas. This will also help instill trust that the completed EIS will be impartial and independent of A&B's specific wants.

No matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on aquatic stream life and Native Hawaiian cultural practices. The EIS should also explore multiple alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water

diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. It is important that this long-awaited EIS is done correctly, which means the process should be directed and paid for by DLNR and include a thorough analysis of all possible impacts from and alternatives to A&B's proposal. I ask that DLNR take direct control of this process as soon as possible.

Mahalo for your time.

Sincerely,  
Kamaile Aipa

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū  
and Huelo License Areas

Dear Ms. Aipā:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas and for your written comments dated March 8, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.

3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

4. Trutta and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).

5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Steam Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Subject: EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Earl Matsukawa,

As you know, DLNR has tasked A&B with the job of commissioning a consultant to prepare an EIS for its proposed 30 year Water Lease for East Maui streams which, if granted, would give A&B the continued "right, privilege, and authority to enter and go upon" the N?hiku, Ke?anae, Honoman?, and Huelo License Areas.

Because A&B is in charge of procuring the EIS, I am worried that it will not include a thorough study of both the full environmental impacts and alternatives to a 30 year lease. It will also give A&B an unfair advantage if and when the lease goes up for public auction, as it is legally required to do so. By tasking A&B with commissioning and paying for the EIS, this government process has lost legitimacy because it appears slanted in A&B's favor.

To remedy this, I request that the DLNR instead pay for and direct the consultant for this EIS. Only if this is done will core parts of the EIS - the definition of the current environment and the identification of alternatives - be comprehensive and encompass all the possible outcomes for the management of these waters and areas. This will also help instill trust that the completed EIS will be impartial and independent of A&B's specific wants.

matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on geologic stream life and Native Hawaiian cultural practices. The EIS should also explore multiple

alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. Subject: EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Wilson Okamoto Corporation,

As you know, BLNR has tasked A&B with the job of commissioning a consultant to prepare an EIS for its proposed 30 year Water Lease for East Maui streams which, if granted, would give A&B the continued "right, privilege, and authority to enter and go upon" the N?hiku, Ke?anae, Honoman?, and Huelo License Areas.

Because A&B is in charge of procuring the EIS, I am worried that it will not include a thorough study of both the full environmental impacts and alternatives to a 30 year lease. It will also give A&B an unfair advantage if and when the lease goes up for public auction, as it is legally required to do so. By tasking A&B with commissioning and paying for the EIS, this government process has lost legitimacy because it appears slanted in A&B's favor.

To remedy this, I request that the DLNR instead pay for and direct the consultant for this EIS. Only if this is done will core parts of the EIS - the definition of the current environment and the identification of alternatives - be comprehensive and encompass all the possible outcomes for the management of these waters and areas. This will also help instill trust that the completed EIS will be impartial and independent of A&B's specific wants.

No matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on aquatic stream life and Native Hawaiian cultural practices. The EIS should also explore multiple

alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. It is important that this long-awaited EIS is done correctly, which means the process should be directed and paid for by DLNR and include a thorough analysis of all possible impacts from and alternatives to A&B's proposal. I ask that DLNR take direct control of this process as soon as possible.

Mahalo for your time.

Sincerely,

Kelli Medeiros

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū  
and Huelo License Areas

Dear Ms. Medeiros:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas and for your written comments dated March 6, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawaiʻi Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawaiʻi Revised Statutes (HRS) Chapter 343 and Hawaiʻi Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

10238-02  
Letter to Ms. Kelli Medeiros  
Page 2  
September 23, 2019

4. Truttia and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Subject: EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Wilson Okamoto Corporation,

Don't let future generations ask, "What were they thinking?" The time to do the right thing for East Maui farmers is long overdue; the first step is not allowing A&B to pay for their own EIS. Expert witnesses who give "expert" testimony always follow the money. Having the DLNR pay for an EIS is the only way to get as much of an impartial opinion as possible.

No matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on aquatic stream life and Native Hawaiian cultural practices. The EIS should also explore multiple alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the N?hiku, Ke?anae, Honomanu  
and Huelo License Areas

Dear Ms. Tyler:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the N?hiku, Ke?anae, Honomanu, and Huelo License Areas and for your written comments dated March 9, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the N?hiku, Ke?anae, Honomanu, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

002646

10238-02  
Letter to Ms. Lauren Tyler  
Page 2  
September 23, 2019

4. Trutina and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSheP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

Subject: EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Wilson Okamoto Corporation,

As you know, BLNR has tasked A&B with the job of commissioning a consultant to prepare an EIS for its proposed 30 year Water Lease for East Maui streams which, if granted, would give A&B the continued "right, privilege, and authority to enter and go upon" the N?hiku, Ke?anae, Honoman?, and Huelo License Areas.

Because A&B is in charge of procuring the EIS, I am worried that it will not include a thorough study of both the full environmental impacts and alternatives to a 30 year lease. It will also give A&B an unfair advantage if and when the lease goes up for public auction, as it is legally required to do so. By tasking A&B with commissioning and paying for the EIS, this government process has lost legitimacy because it appears slanted in A&B's favor.

To remedy this, I request that the DLNR instead pay for and direct the consultant for this EIS. Only if this is done will core parts of the EIS - the definition of the current environment and the identification of alternatives - be comprehensive and encompass all the possible outcomes for the management of these waters and areas. This will also help instill trust that the completed EIS will be impartial and independent of A&B's specific wants.

No matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on aquatic stream life and Native Hawaiian cultural practices. The EIS should also explore multiple

alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. It is important that this long-awaited EIS is done correctly, which means the process should be directed and paid for by DLNR and include a thorough analysis of all possible impacts from and alternatives to A&B's proposal. I ask that DLNR take direct control of this process as soon as possible.

Mahalo for your time.

Sincerely,

Lauri Fritsch

Subject: proposed E. Maui renewal for water use

I am concerned that your upcoming draft EIS contain the following information in order to insure that the permitting process is legal and accurately reflects the environmental effects of water diversion on this ecosystem:

- Full disclosure of every single diversion along the East Maui Irrigation system
  - Full disclosure of the amount of water proposed to be taken from each stream, license area and from the entire license area daily (on average and at minimum and maximum)
  - The impact of how the proposed diversions may affect federally listed plant/ bird/bat & insect species in lease areas
  - The impacts of diverting water from East Maui streams on outdoor recreational activities
  - The impacts on the maintenance of ecosystems
  - The impacts on traditional and customary Hawaiian practices (including kalo farming)
- A discussion of alternatives including: shorter lease periods, less volumes than proposed, termination of diversions from the Nahiku and/or Keanae areas

Mahalo' for your attention to this matter,  
Lina Gooley

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Gooley:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 13, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.
4. Trutta and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

Letter to Ms. Lina Gooley  
Page 2  
September 23, 2019

impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).

5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Subject: EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Wilson Okamoto Corporation,

As you know, BLNR has tasked A&B with the job of commissioning a consultant to prepare an EIS for its proposed 30 year Water Lease for East Maui streams which, if granted, would give A&B the continued "right, privilege, and authority to enter and go upon" the N?hiku, Ke?anae, Honoman?, and Huelo License Areas.

Because A&B is in charge of procuring the EIS, I am worried that it will not include a thorough study of both the full environmental impacts and alternatives to a 30 year lease. It will also give A&B an unfair advantage if and when the lease goes up for public auction, as it is legally required to do so. By tasking A&B with commissioning and paying for the EIS, this government process has lost legitimacy because it appears slanted in A&B's favor.

To remedy this, I request that the DLNR instead pay for and direct the consultant for this EIS. Only if this is done will core parts of the EIS - the definition of the current environment and the identification of alternatives - be comprehensive and encompass all the possible outcomes for the management of these waters and areas. This will also help instill trust that the completed EIS will be impartial and independent of A&B's specific wants.

No matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on aquatic stream life and Native Hawaiian cultural practices. The EIS should also explore multiple

alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. It is important that this long-awaited EIS is done correctly, which means the process should be directed and paid for by DLNR and include a thorough analysis of all possible impacts from and alternatives to A&B's proposal. I ask that DLNR take direct control of this process as soon as possible.

Mahalo for your time.

Sincerely,  
Lory Ono

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū,  
and Huelo License Areas

Dear Ms. Ono:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 7, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Drehsen:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 10, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

4. Truttia and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversion on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Subject: EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Earl Matsukawa,

As you know, BLNR has tasked A&B with the job of commissioning a consultant to prepare an EIS for its proposed 30 year Water Lease for East Maui streams which, if granted, would give A&B the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas.

Because A&B is in charge of procuring the EIS, I am worried that it will not include a thorough study of both the full environmental impacts and alternatives to a 30 year lease. It will also give A&B an unfair advantage if and when the lease goes up for public auction, as it is legally required to do so. By tasking A&B with commissioning and paying for the EIS, this government process has lost legitimacy because it appears slanted in A&B's favor.

To remedy this, I request that the DLNR instead pay for and direct the consultant for this EIS. Only if this is done will core parts of the EIS - the definition of the current environment and the identification of alternatives - be comprehensive and encompass all the possible outcomes for the management of these waters and areas. This will also help instill trust that the completed EIS will be impartial and independent of A&B's specific wants.

No matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on aquatic stream life and Native Hawaiian cultural practices. The EIS should also explore multiple alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. It is important that this long-awaited EIS is done correctly, which means the process should be directed and paid for by DLNR and include a thorough analysis of all possible impacts from and alternatives to A&B's proposal. I ask that DLNR take direct control of this process as soon as possible.

Mahalo for your time.

Sincerely,  
Matthew Nall

4. Trutina and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).

5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).

6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Subject: EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Earl Matsukawa,

As you know, BLNR has tasked A&B with the job of commissioning a consultant to prepare an EIS for its proposed 30 year Water Lease for East Maui streams which, if granted, would give A&B the continued "right, privilege, and authority to enter and go upon" the N?hiku, Ke?anae, Honoman?, and Huelo License Areas.

Because A&B is in charge of procuring the EIS, I am worried that it will not include a thorough study of both the full environmental impacts and alternatives to a 30 year lease. It will also give A&B an unfair advantage if and when the lease goes up for public auction, as it is legally required to do so. By tasking A&B with commissioning and paying for the EIS, this government process has lost legitimacy because it appears slanted in A&B's favor.

To remedy this, I request that the DLNR instead pay for and direct the consultant for this EIS. Only if this is done will core parts of the EIS - the definition of the current environment and the identification of alternatives - be comprehensive and encompass all the possible outcomes for the management of these waters and areas. This will also help instill trust that the completed EIS will be impartial and independent of A&B's specific wants.

No matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on aquatic stream life and Native Hawaiian cultural practices. The EIS should also explore multiple alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. It is important that this long-awaited EIS is done correctly, which means the process should be directed and paid for by DLNR and include a thorough analysis of all possible impacts from and alternatives to A&B's proposal. I ask that DLNR take direct control of this process as soon as possible.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū,  
and Huelo License Areas

Dear Ms. Christensen:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 9, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

4. Truttia and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversion on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

I ask that DLNR take direct control of this process as soon as possible.

Mahalo for your time.

I feel that it is a conflict of interest for A&B to hire it's own consultant to do the EIS. It needs to be done by DLNR so that public interests are served, not A&Bs

Sincerely,  
Melanie Padgett

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the N?hiku, Ke?anae, Honoman? and Huelo License Areas

Dear Ms. Anderson:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the N?hiku, Ke?anae, Honoman?, and Huelo License Areas and for your written comments dated March 6, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the N?hiku, Ke?anae, Honoman?, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.
4. Trutta and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

002666

impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).

5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Subject: EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Wilson Okamoto Corporation,

As you know, BLNR has tasked A&B with the job of commissioning a consultant to prepare an EIS for its proposed 30 year Water Lease for East Maui streams which, if granted, would give A&B the continued "right, privilege, and authority to enter and go upon" the N?hiku, Ke?anae, Honoman?, and Huelo License Areas.

Because A&B is in charge of procuring the EIS, I am worried that it will not include a thorough study of both the full environmental impacts and alternatives to a 30 year lease. It will also give A&B an unfair advantage if and when the lease goes up for public auction, as it is legally required to do so. By tasking A&B with commissioning and paying for the EIS, this government process has lost legitimacy because it appears slanted in A&B's favor.

To remedy this, I request that the DLNR instead pay for and direct the consultant for this EIS. Only if this is done will core parts of the EIS - the definition of the current environment and the identification of alternatives - be comprehensive and encompass all the possible outcomes for the management of these waters and areas. This will also help instill trust that the completed EIS will be impartial and independent of A&B's specific wants.

No matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on aquatic stream life and Native Hawaiian cultural practices. The EIS should also explore multiple

alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. It is important that this long-awaited EIS is done correctly, which means the process should be directed and paid for by DLNR and include a thorough analysis of all possible impacts from and alternatives to A&B's proposal. I ask that DLNR take direct control of this process as soon as possible.

Mahalo for your time.

Sincerely,  
Michelle Ramos

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Ramos:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 9, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.
4. Trutta and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).

5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Subject: Re: Draft EIS Scoping Comment

Dear Sir,

\*\*Please forgive the accidental sending of the first email\*\*

It is my understanding that an East Maui Watershed EIS is being formulated regarding the water lease from that flank of Haleakala. I just wanted to voice my concern that it will satisfy all standard NEPA processes, including the socioeconomic impacts to the native peoples of East Maui. Below is a list of those concerns that I hope will be addressed in this important lease decision.

- Full disclosure of every single diversion along the East Maui Irrigation system
- Full disclosure of the amount of water proposed to be taken from each stream, license area and from the entire license area daily (on average and at minimum and maximum)
- The impact of how the proposed diversions may affect federally listed plant/ bird/bat & insect species in lease areas
- The impacts of diverting water from East Maui streams on outdoor recreational activities
- The impacts on the maintenance of ecosystems
- The impacts on traditional and customary Hawaiian practices (including kalo farming)
- A discussion of alternatives including: shorter lease periods, less volumes than proposed, termination of diversions from the Nāhiku and/or Kēānāe areas

The above list was copied from the concerns expressed from the Surfrider Foundation. The population of this island continues to grow and long term, large scale sugar and pineapple

production have come to an end. Perhaps it is time to reconsider putting most of the water back where it belongs, in their respective gravity fed drainages?

Thank you for your time,

Nicholi Stoyanoff

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū  
and Huelo License Areas

Dear Mr. Stoyanoff:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas and for your written comments dated March 13, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawaiʻi Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawaiʻi Revised Statutes (HRS) Chapter 343 and Hawaiʻi Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

10238-02  
Letter to Mr. Nicholi Stoyanoff  
Page 2  
September 23, 2019

4. Trutina and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).

5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).

6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Lailey:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 9, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

002674

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

4. Truttia and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Steam Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Subject: EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Wilson Okamoto Corporation,

As you know, DLNR has tasked A&B with the job of commissioning a consultant to prepare an EIS for its proposed 30 year Water Lease for East Maui streams which, if granted, would give A&B the continued "right, privilege, and authority to enter and go upon" the N?hiku, Ke?anae, Honoman?, and Huelo License Areas.

Because A&B is in charge of procuring the EIS, I am worried that it will not include a thorough study of both the full environmental impacts and alternatives to a 30 year lease. It will also give A&B an unfair advantage if and when the lease goes up for public auction, as it is legally required to do so. By tasking A&B with commissioning and paying for the EIS, this government process has lost legitimacy because it appears slanted in A&B's favor.

To remedy this, I request that the DLNR instead pay for and direct the consultant for this EIS. Only if this is done will core parts of the EIS - the definition of the current environment and the identification of alternatives - be comprehensive and encompass all the possible outcomes for the management of these waters and areas. This will also help instill trust that the completed EIS will be impartial and independent of A&B's specific wants.

matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on aquatic stream life and Native Hawaiian cultural practices. The EIS should also explore multiple

alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. It is important that this long-awaited EIS is done correctly, which means the process should be directed and paid for by DLNR and include a thorough analysis of all possible impacts from and alternatives to A&B's proposal. I ask that DLNR take direct control of this process as soon as possible.

Mahalo for your time.

Sincerely,  
Randall Rospond

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Rospond:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 10, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.
4. Trutta and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).

5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

4. Truttia and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).

5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).

6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Steam Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Subject: EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Daniel Yasui,

As you know, BLNR has tasked A&B with the job of commissioning a consultant to prepare an EIS for its proposed 30 year Water Lease for East Maui streams which, if granted, would give A&B the continued "right, privilege, and authority to enter and go upon" the N?hiku, Kē?anae, Honomanu?, and Huelo License Areas.

Because A&B is in charge of procuring the EIS, I am worried that it will not include a thorough study of both the full environmental impacts and alternatives to a 30 year lease. It will also give A&B an unfair advantage if and when the lease goes up for public auction, as it is legally required to do so. By tasking A&B with commissioning and paying for the EIS, this government process has lost legitimacy because it appears slanted in A&B's favor.

To remedy this, I request that the DLNR instead pay for and direct the consultant for this EIS. Only if this is done will core parts of the EIS - the definition of the current environment and the identification of alternatives - be comprehensive and encompass all the possible outcomes for the management of these waters and areas. This will also help instill trust that the completed EIS will be impartial and independent of A&B's specific wants.

matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on

aquatic stream life and Native Hawaiian cultural practices. The EIS should also explore multiple alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. It is important that this long-awaited EIS is done correctly, which means the process should be directed and paid for by DLNR and include a thorough analysis of all possible impacts from and alternatives to A&B's proposal. I ask that DLNR take direct control of this process as soon as possible.

Mahalo for your time.

Sincerely,  
Shannon Rudolph

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Rudolph:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 6, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

10238-02  
Letter to Ms. Shannon Rudolph  
Page 2  
September 23, 2019

4. Truttia and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Steam Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Rospond:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 10, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

4. Truttia and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Byrne:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 9, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

4. Truttia and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).

5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).

6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversion on 33 East Maui Streams using the Hawaiian Steam Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Subject: EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Wilson Okamoto Corporation,

As you know, DLNR has tasked A&B with the job of commissioning a consultant to prepare an EIS for its proposed 30 year Water Lease for East Maui streams which, if granted, would give A&B the continued "right, privilege, and authority to enter and go upon" the N?hiku, Ke?anae, Honoman?, and Huelo License Areas.

Because A&B is in charge of procuring the EIS, I am worried that it will not include a thorough study of both the full environmental impacts and alternatives to a 30 year lease. It will also give A&B an unfair advantage if and when the lease goes up for public auction, as it is legally required to do so. By tasking A&B with commissioning and paying for the EIS, this government process has lost legitimacy because it appears slanted in A&B's favor.

To remedy this, I request that the DLNR instead pay for and direct the consultant for this EIS. Only if this is done will core parts of the EIS - the definition of the current environment and the identification of alternatives - be comprehensive and encompass all the possible outcomes for the management of these waters and areas. This will also help instill trust that the completed EIS will be impartial and independent of A&B's specific wants.

matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on aquatic stream life and Native Hawaiian cultural practices. The EIS should also explore multiple

alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. It is important that this long-awaited EIS is done correctly, which means the process should be directed and paid for by DLNR and include a thorough analysis of all possible impacts from and alternatives to A&B's proposal. I ask that DLNR take direct control of this process as soon as possible.

Mahalo for your time.

Sincerely,  
Susan Douglas

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Douglas:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 10, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

002690

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

4. Truttia and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversion on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Litchfield:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 6, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.

2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.

3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

4. Truttia and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).

6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Letter to Mr. Timothy Hills  
Page 2  
September 23, 2019

4. Trutina and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Subject: EIS Preparation Notice Comments for A&B Proposed Water Lease

Dear Earl Matsukawa,

As you know, BLNR has tasked A&B with the job of commissioning a consultant to prepare an EIS for its proposed 30 year Water Lease for East Maui streams which, if granted, would give A&B the continued "right, privilege, and authority to enter and go upon" the N?hiku, Ke?anae, Honoman?, and Huelo License Areas.

Because A&B is in charge of procuring the EIS, I am worried that it will not include a thorough study of both the full environmental impacts and alternatives to a 30 year lease. It will also give A&B an unfair advantage if and when the lease goes up for public auction, as it is legally required to do so. By tasking A&B with commissioning and paying for the EIS, this government process has lost legitimacy because it appears slanted in A&B's favor.

To remedy this, I request that the DLNR instead pay for and direct the consultant for this EIS. Only if this is done will core parts of the EIS - the definition of the current environment and the identification of alternatives - be comprehensive and encompass all the possible outcomes for the management of these waters and areas. This will also help instill trust that the completed EIS will be impartial and independent of A&B's specific wants.

No matter who completes this EIS, I would like to see that it provides a complete analysis of past, present, and potential future environmental impacts from stream diversions, including both effects on aquatic stream life and Native Hawaiian cultural practices. The EIS should also explore multiple alternatives to the proposed 30 year lease, including: shorter leasing periods, lesser amounts of water diverted than stated in the current EIS, and the viability of alternatively using pumped well water in place of some or all diverted stream water.

In conclusion, the East Maui community's struggle for water has long been ignored by A&B. It is important that this long-awaited EIS is done correctly, which means the process should be directed and paid for by DLNR and include a thorough analysis of all possible impacts from and alternatives to A&B's proposal. I ask that DLNR take direct control of this process as soon as possible.

Mahalo for your time.

Sincerely,  
tony.aneelini

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Angelini:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 9, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public action. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public action.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

4. Truttia and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversion on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Toro:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 7, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

4. Truttia and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
5. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversion on 33 East Maui Streams using the Hawaiian Steam Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP
