

REPORT TO THE THIRTY-FIRST LEGISLATURE
STATE OF HAWAII
2021 REGULAR SESSION

IMPLEMENTATION OF CHAPTER 190D, HAWAII REVISED STATUTES
OCEAN AND SUBMERGED LANDS LEASING

PREPARED BY:
DEPARTMENT OF AGRICULTURE
AND
DEPARTMENT OF LAND AND NATURAL RESOURCES

IN RESPONSE TO SECTION 12 OF ACT 176, SESSION LAWS OF HAWAII 1999

December 2020

3.2 Other Activities	5
4.0 Conclusions	5
5.0 Recommendations	6

1.0 Introduction

Act 176, Session Laws of Hawaii 1999, went into effect on July 1, 1999, allowing greater use of Hawaii's ocean resources for research and commercial development of open ocean aquaculture. In addition the law requires the Department of Land and Natural Resources (DLNR) in cooperation with the Department of Agriculture (DOA), to submit a report to the Legislature prior to each regular legislative session. This report highlights related national activities and addresses the progress in implementing ocean leasing for open ocean aquaculture during 2020.

2.0 The National Scene

On May 7, 2020, President Trump signed the Executive Order on Promoting American Seafood Competitiveness and Economic Growth – signaling a renewed Federal interest in developing and sustaining the fishery and ocean aquaculture industries. The order authorizes NOAA as the lead entity to consolidate and streamline the review and permitting process and establish aquaculture opportunity areas in Federal waters. The State will continue to work closely with the NOAA's Pacific Islands Regional Office on implementation of the executive order as appropriate.

The NOAA Office of Aquaculture has continued to define its priority areas which include regulation and policy, science and research, outreach and education, and international activities. Each priority area is explained below.

Regulation and Policy

The purpose of this effort is to enable domestic aquaculture production within the context of NOAA's marine stewardship responsibilities, which include the protection of the marine environment while balancing multiple uses of coastal and ocean waters. NOAA's role in aquaculture regulation include:

- consultations with the U.S. Army Corps of Engineers on permitting
- consultations with the Environmental Protection Agency on endangered species, fish habitat, and marine mammal protection
- issuing permits under the Magnuson-Stevens Fishery Conservation and Management Act
- developing guidance and working with regional Fishery Management Councils on a regulatory framework for aquaculture in federal waters.

Science and Research

The goal of the research initiatives is to provide science knowledge for the agency's regulatory and resource management decisions and foster innovative and sustainable approaches to aquaculture.

The program's current research initiatives focus on:

- strengthening aquaculture research capabilities at the agency's regional Fisheries Science Centers;
- in-house research focused on genetics, alternative feeds for marine fish, restoration of threatened and endangered species, and stock enhancement; and

Outreach and Education

Outreach and education activities include disseminating scientific and general aquaculture information and NOAA research at public meetings and conferences, through the Sea Grant and USDA Aquaculture Extension networks, and through the web and social media.

The program's primary audiences for this information are coastal communities, research scientists, the aquaculture and seafood industries, commercial and recreational fishermen, fishery management councils and commissions, other

government agencies, academia, and interested non-governmental organizations.

International Activities

The NOAA Aquaculture Program is involved in a variety of international bilateral research exchanges, including a Living Marine Resources Exchange with China, an ongoing scientific exchange program with Korea, and the U.S.-Japanese Cooperative Program in Natural Resources (UJNR). The program also works with policymakers and researchers from France, Norway, and Canada on an ongoing basis.

3.0 Hawaii Activities

3.1 Commercial Development Progress

3.1.1 Keahole Point Fish

Keahole Point Fish (KPF) was purchased by Cuna del Mar and Renewable Resources Group and transitioned to a new management team. The purchase has allowed the operation to expand growth plans, both onshore and offshore. Onshore, KPF purchased a processing facility within NELHA, and will be a fully vertically-integrated company. Hawaiian Kanpachi (*Seriola rivoliana*) is sold to markets in Hawaii and California, with additional sales opportunities in the U.S. East Coast, Asia and Europe.

3.1.2 Cates International

Cates International is working through the permitting process to establish a cage aquaculture operation located off the end of the airport runway. The permitting delays focus on access and Homeland Security issues.

3.2 Other Activities and Major Developments

4.0 Conclusions

The continued expansion by Keahole Point Fish Co is a promising sign for the offshore sector. Hawaii must find at least two more sustainable operations to establish a sustainable industry that will generate significant tax revenue and protein production.

5.0 Recommendations

The proper infrastructure must be established to balance environmental concerns with opportunities for development. Areas for focus are governance, environmental impact and health management. Governance is crucial because there is a current lack of clear federal responsibility and jurisdiction in governing the open ocean space and a lack of standards to protect the marine environment. Funding needs to be secured to support research and the implementation of protocols to identify and mitigate environmental and health risks for aquaculture products. Additionally, a system to disseminate authoritative information needs to be implemented to support further expansion of the aquaculture industry.
