LOG NO: 2010.2592
DOC NO: 1008TD13

Dear Dr. Haun:

**SUBJECT: Chapter 6E-8 Historic Preservation Review –
Draft Addendum Archaeological Inventory Survey Report for 272.063 Acres
Keahuolū Ahupua'a, North Kona District, Island of Hawai'i
TMK: (3) 7-4-021: 020, 024, 025, 026 and 027**

Thank you for submitting the draft report entitled *Addendum Archaeological Inventory Survey TMK: (3) 7-4-021: 020, 024, 025, 026 and 027, Land of Keahuolu, North Kona District, Island of Hawai'i* (A.E. Haun, D. Berrigan and D. Henry, June 2010, Report 734-041510).

The report describes the findings of an intensive pedestrian survey of the Kamakana Villages development area, proposed for 2,320 residential units, three retail centers, three parks and two archaeological preserves. Hawaii Housing Finance and Development Corporation (HHFDC) and Forest City Hawaii Kona, LLC are the primary developers. The addendum survey follows an archaeological mitigation plan update, which was completed by your firm in November 2009 (Haun & Henry 2009). Fieldwork for the preceding study indicated that the findings of a prior inventory survey (Donham 1990) of this area were not acceptable for use in preservation planning, and SHPD recommended that the entire project area be resurveyed (*Log 2010.4069, Doc 1002TD07*). Because the 1990 survey had been previously accepted by our office, the current submittal is considered an addendum report.

A total of 149 historic properties comprising 3,326 features were identified within the project area. These include 29 previously identified sites and 120 newly-identified sites. The majority of identified features (80%) are agricultural modified outcrops (n=2,655); agricultural mounds (n=116) and pahoehoe excavations (n=196) are also common. The remaining features include 58 lava tubes, 54 enclosures, 30 platforms, 25 walls, 21 cairns, 20 petroglyphs, 16 filled cracks, 15 trails, 9 lava blisters, 8 pavements, 4 C-shapes, 4 L-shapes, 2 cart paths, 2 walled terraces, and one each of a cupboard, road, upright, U-shape and walled platform.

Subsurface testing was conducted at 69 locations during the current survey; three locations during the mitigation plan update; and seven locations during the 1989-1990 survey. Tested features include 31 permanent habitation structures, 29 agricultural features, 10 temporary habitation features, a cart path and an historic habitation feature. The survey also included examination of 323 lava tubes/blisters, of which 67 were found to contain cultural materials and/or features. All of the examined non-cultural tubes, blisters and overhangs are located on a map of the project area, providing an excellent overview of the non-cultural geological features for comparison to the distribution of cultural features.

Dr. Alan Haun

The report contains appropriate background information for an addendum survey; and documentation of the identified historic properties is adequate, pursuant to HAR §13-276.

The report recommends that all the identified sites are significant under HAR 13-284 Criterion "d", for important information relating to history or prehistory. We concur with these assessments. Eighteen sites are recommended for additional significance under Criterion "e" for their cultural value to Native Hawaiian people. These include six identified burial sites (13441, 13474, 26902, 26906, 28444 and 28400); eight possible burial sites located within the preservation area (13398, 28484, 28488, 28489, 28491, 28492, 28494, and 28497); two ceremonial sites (13463 and 28458); one ceremonial/burial site (13463); and a petroglyph site (13463). We concur with these assessments. Two sites are recommended for additional significance under Criterion "c" as excellent examples of site types (28423 and 13441). We concur with these assessments.

Twenty-four sites comprising approximately 90 features are recommended for preservation. These include all of the identified burial sites and possible burial sites, and all sites assessed under two or more significance criteria as listed above. In addition, numerous agricultural features associated with Site 26909 are located within the boundaries of the southwestern preservation area and will also be preserved. We concur with the recommendations for preservation and look forward to receiving a preservation plan and/or burial treatment plan for the twenty-four sites (28458, 13463, 28423, 13474, 26906, 28400, 13398, 13400, 13413, 28483, 28484, 28486-88, 28491-92, and 28494-98, 13441, 26902, and 28444).

Twenty-three sites are recommended for no further work. We concur with this recommendation regarding twenty-two of these sites. We request that Site 29090, the agricultural complex comprised of 2,725 features be included among the 102 sites recommended for further data collection. Please contact our office regarding the specifics of further work at this site. We look forward to receiving a data recovery plan addressing specific research questions and proposed fieldwork at the 103 sites recommended for data recovery.

We have a few comments regarding minor editorial corrections (see attachment). The subject addendum report will be approved in accordance with HAR §13-276, upon receipt of corrected relevant pages. If you have any questions, please contact Theresa Donham at 933-7653 or Theresa.K.Donham@hawaii.gov.

Aloha,

Theresa K. Donham
Acting Archaeology Branch Chief
Historic Preservation Division

Comments and Questions: *Addendum Archaeological Inventory Survey*

TMK: (3) 7-4-021: 020, 024, 025, 026 and 027, Land of Keahuolu, North Kona District, Island of Hawaii
A.E. Haun, D. Berrigan and D. Henry, June 2010, Report 734-041510

1. UTM coordinate information is provided for every feature, either as part of the feature description, or in tabulated format. We understand that this information was requested to be put in reports by a prior SHPD reviewer. Due to the fact that this report will be made available for public review, we request that UTM coordinates be removed from the report for burial features. In the future, we would prefer to have UTM coordinate data submitted in electronic format rather than printed as hard copy in reports.
2. Page 34, Site 13400 description: third paragraph begins with "Site 13440".
3. Site 13465, Feature C (page 67) is a roughly square paved terrace associated with a rectangular enclosure and a platform. The site is interpreted as a permanent habitation complex. Feature A was tested and no cultural material was found. Feature C has not been tested. Based on the appearance and dimensions of Feature C as presented in the report, we request that it be classified as a possible burial until such time that its function is verified.
4. Site 13471, Feature E (page 69) is an oval-shaped platform associated with an upright slab, a rectangular terrace, and a lava tube. The site is interpreted as a permanent habitation complex. The rectangular terrace (Feature C) was tested and no cultural materials were found. Feature E has not been tested. Based on the appearance and dimensions of Feature E as presented in the report, and absence of portable materials, we request that it be classified as a habitation/possible burial until such time that its function is verified.
5. Site 26909 (page 95) is described as a complex with 2,725 features. The fifth paragraph of the description states that there are 2,779 clearing piles. Please check to see if this figure should read 2,704.
6. Figure 68, page 122; the caption for this map (Site 1169...") should read "Site 26909, Feature 1169...".
7. Site 28405 (page 147) is described as a rectangular terrace with a surface area of 21.3 square meters. A 1 x 1 meter test unit was excavated near the center of the terrace and no cultural material was found. No cultural material was observed on the surface of the feature; however, the function is inferred as permanent habitation. Due to the small percentage of the terrace that has been tested; the appearance and dimensions as reported, and the absence of portable remains, we request that this feature be classified as habitation/possible burial until such time that its function is verified.
8. Site 28408, Features C and D (page 152) excavation results: 2.3 grams of charcoal was recovered from Layer II beneath Feature C, and 3.3 grams of charcoal were recovered from Layer II soil beneath platform fill of Feature D. Please indicate that this charcoal will be submitted for identification and age determination analysis during the data recovery phase of work.
9. Site 28415 (page 162) consists of three adjoining terraces within an area 13.5 by 13.0 meters. The site is interpreted as a permanent habitation complex. No testing was conducted during the survey. We request that the site be classified as permanent habitation/possible burial until such time that its function is verified.
10. Page 349, first paragraph, 8th line, the words "the project area" are repeated.
11. Page 352, recommended treatments, please include a discussion about the number and types of sites recommended for data recovery and a discussion of proposed research problems that will be addressed in the data recovery. Also, please correct this page to reflect addition of Site 26909 to the list for data recovery.
